Below-Ground Interactions in Ecological Processes Oren Shelef,Philip G. Hahn,Ana Pineda,Mysore V. Tejesvi,Ainhua Martinez-Medina,2020-01-29 Aboveground interactions between plants and organisms have served as a foundation of ecological and evolutionary theories Accumulating evidence suggests that interactions that occur belowground can have immense influence on eco evolutionary dynamics of plants Despite the increasing awareness among scientists of the importance of belowground interactions for plant performance and community dynamics they have received considerably less theoretical and empirical attention compared to aboveground interactions In this eBook we aim to highlight the overlooked roles of belowground interactions and outline their myriad ecological roles from affecting soil health through impacting plant interactions with above ground fauna This eBook with 18 articles and an Editorial includes conceptual contribution together with original research work The chapters are exploring the roles of belowground biotic interactions in the context of ecological processes both below and above ground

Mobile Elements and Plant Genome Evolution, Comparative Analyses and Computational Tools, Volume II Ruslan Kalendar,Gennady I. Karlov,2023-11-28 This Research Topic is part of the Mobile Elements and Plant Genome Evolution Comparative Analyses and Computational Tools series Mobile Elements and Plant Genome Evolution Comparative Analyses and Computational Tools Transposable elements are very common mobile genetic elements that are composed of several classes and make up the majority of eukaryotic genomes The movement and accumulation of mobile genetic elements have been a major force in the formation of the genes and genomes of nearly all

organisms As dispersed and ubiquitous mobile elements their life cycle of replicative transposition leads to genome rearrangements affecting cellular function Transposable elements are important drivers of species diversity and they exhibit great variety in structure size and mechanisms of transposition making them important putative actors in genome evolution

Women in Avian Physiology: 2023 Sandra G. Velleman, Francesca Soglia, Servet Yalcin, 2024-03-14 At present less than 30% of researchers worldwide are women Long standing biases and gender stereotypes discourage girls and women from pursuing a career in science technology engineering and mathematics STEM research Science and gender equality are however essential to ensure sustainable development Although underrepresented and often unacknowledged female researchers have been crucial to scientific advances In order to change traditional mindsets gender equality must be promoted stereotypes defeated and girls and women should be encouraged to pursue STEM careers Anaerobic Digestion Gavin Collins, Eric D. van Hullebusch, Giovanni Esposito, Cynthia Carliell-Marquet, Fernando G. Fermoso, 2018-11-27 Anaerobic digestion AD is a naturally occurring biological process in soils sediments ruminants and several other anoxic environments that cycles carbon and other nutrients and converts organic matter into a methane rich gas As a biotechnology AD is now well established for the treatment of the organic fraction of various waste materials including wastewaters but is also increasingly applied for an expanding range of organic feedstocks suitable for biological conversion to biogas AD applications are classified in various ways including on the basis of bioreactor design and operating parameters such as retention time temperature pH total solids TS and volatile solids VS contents and biodegradability of substrates AD is an attractive bioenergy and waste wastewater treatment technology The advantages of AD for waste treatment include production of a useable fuel biogas methane possibility of high organic loading reduced carbon footprint and suitability for integration into a wide variety of process configurations and scales Specifically two important and developing applications exemplify the potential of AD technologies 1 the integration of AD as the basis of the core technologies underpinning municipal wastewater and sewage treatment to displace less sustainable and more energy intensive aerobic biological treatment systems in urban water infrastructures and 2 technical innovations for higher rate conversions of high solids wastestreams and feedstocks for the production of energy carriers i e methane biogas but possibly also biohydrogen and other industrially relevant intermediates such as organic acids Internationally the research effort to maximize AD biogas yield has increased ten fold over the past decade Depending on the feedstocks bioreactor design and process parameters fundamental and applied knowledge are still required to improve conversion rates and biogas yields This Research Topic cover aspects related to AD
