Nobel Universal Graphical Language Milan Randic, 2010-05-24 Nobel is a pictographic language based on some 120 basic signs and many arrows of different shape that are mutually combined It is named after Alfred Nobel 1833-1896 Swedish chemist and industrialist inventor of dynamite who left most of his fortune to a foundation that annually gives awards to individuals whose work is characterized as greatest benefit to mankind known as Nobel Prizes Besides the awards for sciences and literature significantly Alfred Nobel included among others a prize for peace that besides individuals also organizations may obtain Although it would be utopian to believe that human conflicts could be avoided if communication tools would improve the emergence of universal languages certainly cannot make the situation worse Universal languages are a communication tool which makes it possible for people of no common language to communicate They are graphic but they should be distinguished from picture writings which only passively offer information on some event or give messages Universal languages have more similarity with the sign languages that are used for people who lost hearing or the sign language of American Plains Indians who spoke different languages and could communicate by sign language that

they developed However written language has some advantages over hand sign languages in that one can communicate at a great distance particularly today in the age of fax and computer communications and that one can leave messages for posterity This is not the place to argue for or against the promise of written sign languages Graphic written sign languages exist today and the best known are Chinese characters used in China and Japan The problem with Chinese characters is that there are too many characters and it is difficult to learn so many It takes years for children in China and Japan to learn so many different characters and the task would be even harder for grown people to learn if they have not done this when young Nobel is designed to remove this difficulty and is based on the following requirements 1 SMALL NUMBER OF BASIC SIGNS 2 SIGNS SHOULD BE EASY TO RECOGNIZE 3 SIGNS SHOULD BE EASY TO REPRODUCE 4 COMBINATIONS LIMITED TO THREE SIGNS 5 COMPLEMENTARY We have already mentioned that Nobel uses about 120 basic signs which can be viewed as a small number particularly in view of over 100 signs of Nobel that are so obvious that they can be easily absorbed The other requirements are also very important There are many signs that can be easily recognized but in order to be acceptable for Nobel they also need to be easily reproduced because that will facilitate communication Also when making combinations of signs one has to make some restriction in order to maintain clarity so we decided to have no more than three signs combined into single word Finally the last requirement that of complementarities needs some explanation Besides having signs that one can easily recognize and easily draw one needs some structure to be embedded into composition of signs that facilitates one to remember and learn signs easily We refer to this structure as complementary or broadly speaking associational and what it implies is that words and objects that are related should have related signs Thus for example pairs of words like man woman cat dog coffee tea good bad love hate etc should have signs that are in some opposition while words like smoke flame fire tree wood forest water sea ocean good better best should have signs that are in competition With this in mind when one sees and learns the basic signs the meaning of many combinations of signs can be in advance anticipated This helps one to learn Nobel rather fast not months not weeks perhaps not even days but a couple of hours may suffice that one may learn hundreds and hundreds of words In this respect Nobel may be unique among languages written spoken of *Pasilogia: an essay towards the formation of a system of universal language* Edward Groves,1846

**Languages in Seventeenth and Early Eighteenth-century Imaginary Voyages** Paul Cornelius,1965 *George Dalgarno on Universal Language* David Cram,Jaap Maat,2001-07-05 George Dalgarno s *Art of Signs Ars Signorum* 1661 was the first work in the seventeenth century to present a fully elaborated universal language constructed on philosophical principles It contains a wealth of observations on human language and the nature of representation in general and the author takes issue with leading philosophers of his day notably Hobbes and Descartes on epistemological and logical questions By including the first complete English translation alongside the Latin the present edition makes this seminal text accessible to a wider audience The text is further elucidated by a previously unpublished autobiographical tract in which Dalgarno describes

the development of his ideas and his discussions with John Wilkins who eventually was to produce a rival universal language scheme In this tract Dalgarno provides in unprecedented detail a lucid account of the major issues involved in the debate on the structure of a philosophical language Further tracts by Dalgarno reprinted here illustrate other facets of his thought These include a series of broadsheets in which he advertised his scheme The Deaf and Dumb Man s Tutor 1680 which contains some original observations concerning the teaching of language to the deaf and a treatise on Double Consonants one of the earliest treatments of phonotactics In bringing together for the first time the full range of Dalgarno s linguistic work which has striking resonance with modern work in universal grammar and cognitive science the present volume gives ready access to the ideas of this original and stimulating thinker

Sumillera,Jan Surman,Ekaterina Smirnova,2016-01-29 Language is the most essential medium of scientific activity Many historians sociologists and science studies scholars have investigated scientific language for this reason but only few have examined those cases where language itself has become an object of scientific

discussion Over the centuries scientists have sought to control refine and engineer language for various epistemological communicative and nationalistic purposes This book seeks to explore cases in the history of science in which questions or concerns with language have bubbled to the surface in scientific discourse This opens a window into the particular ways in which scientists have conceived of and construed language as the central medium of their activity across different cultural contexts and places and the clashes and tensions that have manifested their many attempts to engineer it to both preserve and enrich its function The subject of language draws out many topics that have mostly been neglected in the history of science such as the connection between the emergence of national languages and the development of science within national settings and allows us to connect together historical episodes from many understudied cultural and linguistic venues such as Eastern European and medieval Hebrew science [Resources in Education](#) ,1981-05 *Encyclopaedia Metropolitana, Or, Universal Dictionary of Knowledge: Pure sciences* Edward Smedley,Hugh James Rose,Henry John Rose,1845

reason itself is examined through a discussion of all the activities Kant attributes to reason. In separate chapters discussing the role of reason in science, morality, religion, and philosophy, Neiman explores Kant's distinctions between reason and knowledge and his difficult account of the regulative principles of reason. Through examination of these principles in Kant's major and minor writings, *The Unity of Reason* provides a fundamentally new perspective on Kant's entire work.
