Numeral Types And Changes Worldwide:

Numeral Types and Changes Worldwide Jadranka Gvozdanović, 1999 TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language. The series publishes state of the art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by approaching language from an interdisciplinary perspective. TRENDS IN LINGUISTICS considers itself a forum for cutting edge research based on solid empirical data on language in its various manifestations including sign languages. It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language. TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints. High quality standards are ensured through anonymous reviewing.

A Typology of Numeral Systems in South Asian Languages Kumari Mamta, 2024-04-10 This book takes a journey into the fascinating world of numerical systems in South Asian languages offering a unique exploration of the intricate patterns, cultural nuances and historical significance embedded within the numerical frameworks of the given languages. It blends the discovery of new facts with the reinterpretation of existing ones while developing a methodology for investigating number systems that can be applied to languages around the world. It is a groundbreaking study that unveils the complex linguistic patterns and socio-cultural significance of numerical systems in South Asian languages offering valuable insights for researchers, linguists, anthropologists and language enthusiasts alike. By bridging the gap between linguistics, anthropology, cultural studies and mathematics, this book encourages interdisciplinary dialogue and collaboration by examining numeral systems from multiple angles.

Classifier Structures in Mandarin Chinese Niina Ning Zhang, 2013-05-28 This monograph addresses fundamental syntactic issues of classifier constructions based on a thorough study of a typical classifier language Mandarin Chinese It shows that the contrast between count and mass is not binary Instead there are two independently attested features Numerability the ability of a noun to combine with a numeral directly and Delimitability the ability of a noun to be modified by a delimitive modifier such as size shape or boundary modifier Although all nouns in Chinese are non count nouns there is still a mass non mass contrast with mass nouns selected by individuating classifiers and non mass nouns selected by individual classifiers Some languages have the counterparts of Chinese individuating classifiers only some languages have the counterparts of Chinese individual classifiers only and some other languages have no counterpart of either individual or individuating classifiers of Chinese The book also reports that unit plurality can be expressed by reduplicative classifiers in the language Moreover for the constituency of a numeral expression an individual individuating or kind classifier combines with the noun first and then the numeral is integrated but a partitive or collective classifier like a measure word combines with the numeral first before the noun is integrated into the whole nominal structure Furthermore the book identifies the syntactic positions of various uses of classifiers in the language A classifier is at a functional head position that has a dependency with a numeral or a position that has a dependency with a generic or existential quantifier or a position that represents the singular plural contrast or a position that licenses a delimitive modifier when the classifier occurs in a compound
