

Finite Difference: Elliptic Equations

Chapter 29

Solution Technique

- Elliptic equations in engineering are typically used to characterize steady-state, boundary value problems.
- For numerical solution of elliptic PDEs, the PDE is transformed into an algebraic difference equation.
- Because of its simplicity and general relevance to most areas of engineering, we will use a heated plate as an example for solving elliptic PDEs.

Numerical Solution of Elliptic Differential Equations by Reduction to the Interface Boris N. Khoromskij, Gabriel Wittum, 2012-12-06 During the last decade essential progress has been achieved in the analysis and implementation of multilevel rnultigrid and domain decomposition methods to explore a variety of real world applications An important trend in mod ern numerical simulations is the quick improvement of computer technology that leads to the well known paradigm see e g 78 179 high performance computers make it indispensable to use numerical methods of almost linear complexity in the problem size N to maintain an adequate scaling between the computing time and improved computer facilities as N increases In the h version of the finite element method FEM the multigrid iteration real izes an $O(N)$ solver for elliptic differential equations in a domain $n \in \mathbb{R}^d$ with $N \propto h^{-d}$ where h is the mesh parameter In the boundary ele ment method BEM the traditional panel clustering fast multi pole and wavelet based methods as well as the modern hierarchical matrix techniques are known to provide the data sparse approximations to the arising fully populated stiffness matrices with almost linear cost $O(Nr \log Nr)$ where $1 \leq d \leq N$ $0 < h \leq 1$ is the number of degrees of freedom associated with the boundary The aim of this book is to introduce a wider audience to the use of a new class of efficient numerical methods of almost linear complexity for solving elliptic partial differential equations PDEs based on their reduction to the interface

Elliptic Differential Equations Wolfgang Hackbusch, 2017-06-01 This book simultaneously presents the theory and the numerical treatment of elliptic boundary value problems since an understanding of the theory is necessary for the numerical analysis of the discretisation It first discusses the Laplace equation and its finite difference discretisation before addressing the general linear differential equation of second order The variational

formulation together with the necessary background from functional analysis provides the basis for the Galerkin and finite element methods which are explored in detail A more advanced chapter leads the reader to the theory of regularity Individual chapters are devoted to singularly perturbed as well as to elliptic eigenvalue problems The book also presents the Stokes problem and its discretisation as an example of a saddle point problem taking into account its relevance to applications in fluid dynamics **Numerical Methods for Partial Differential Equations** William F. Ames,1969
