*Handbook of Phenomenology and Medicine* S. Kay Toombs, 2012-12-06 As the fields of philosophy of medicine and bioethics have developed in the United States the philosophical perspective of phenomenology has been largely ignored Yet the central conviction that informs this volume is that phenomenology provides extraordinary insights into many of the issues that are directly addressed within the world of medicine Such issues include the nature of medicine itself the distinction between immediate experience and scientific conceptualization the nature of the body and the implications of embodiment in the realm of clinical practice the meaning of health illness and disease the problem of intersubjectivity particularly with respect to achieving successful communication with another the complexity of decision making in the clinical context and in the realm of medical ethics the possibility of empathic understanding the theory and method of clinical practice and the essential characteristics of the therapeutic relationship i e the relationship between the sick person and the one who professes to help Some of the authors who have contributed to this volume are philosophers some are engaged in other academic disciplines and several are practicing healthcare professionals

**Disrupting Higher Education Curriculum** Michael Anthony Samuel, Rubby Dhunpath, Nyna Amin, 2017-05-10

Discomfort with the inappropriateness of university curricula has met with increasing calls for disruptive actions to revitalise higher education This book conceived to envision an alternative emancipatory curriculum explores the historical ideological philosophical and theoretical domains of higher education curricula The authors acknowledge that universities have been and continue to be complicit in perpetuating cognitive damage through symbolic violence associated with indifference to the pernicious effects of race categorisation gender inequalities poverty rising unemployment and cultural hegemony as they continue to frame curricula cultures and practices The book contemplates the project of undoing cognitive damage offering glimpses to redesign curriculum in the 21st century The contributors international scholars emergent and expert researchers include different nationalities orientations and positionalities constituting an interdisciplinary ensemble which collectively provides a rich commentary on higher education curriculum as we know it and where we think it could be in the future The edited volume is a catalytic tool for disrupting canonised rituals of practice in higher education It has been a while since a scholarly book so authoritative in its claims and innovative in its concepts threatens to shake up the curriculum field at its foundations Rich in metaphor and meaning the superbly written chapters challenge a field that once more became moribund as we settled sic far too comfortably into accepting handed down frames and fictions about knowledge authority power and agency that imprint cognitive damage on those forced to the margins of schools and universities Disrupting Higher Education Curriculum demonstrates however that it is in fact from those margins of the education enterprise that academics teachers and learners can see more clearly how patterns of thought and action hold us back from placing and experiencing our African humanity at the centre of the curriculum Jonathan Jansen Rector and Vice Chancellor of the University of the Free State South Africa

**The Child in the World** Eva M. Simms, 2008 The Child in the World builds a bridge between continental philosophers who tend to overlook child existence and developmental psychologists who often fail to consider the philosophical assumptions underlying their work In this volume author Eva M Simms draws on both psychological and phenomenological research to investigate child existence in its cultural and historical context and explore the ways children interact with the world around them

Simms examines key experiences of childhood with special attention to the non dualistic nature of the child's consciousness and the understanding that there is more to the child's experiences than cognitive processes. In chapters that proceed from infancy to early childhood, Simms considers how children live, their embodiment coexists with others' experience, and the spaces and places of their neighborhoods have deeply felt relations to things, grasp time intuitively, and often in contradiction to adult clock time, and are transformed by the mystery of the symbolic order of play and language. Simms's approach is particularly informed by the philosophy of Maurice Merleau-Ponty, which allows for a descriptive and grounded understanding of child experience as well as sophisticated and critical philosophical thinking about human existence in general. By respecting and celebrating the magical non dualistic relationship child consciousness has to the world, *The Child in the World* offers readers a unique opportunity to expand their understanding of human existence. Students and teachers of psychology and philosophy, early childhood educators, psychotherapists, as well as general readers who are parents of young children will enjoy this fascinating volume.

This book examines how self-awareness can be developed and applied in practice by combining theoretical and practical approaches.

What Does Understanding Mathematics Mean for Teachers? Yuichi Handa, 2013-05-13 This book opens up alternative ways of thinking and talking about ways in which a person can know a subject, in this case mathematics, leading to a reconsideration of what it may mean to be a teacher of that subject. In a number of European languages, a distinction is made in ways of knowing that in the English language is collapsed into the singular word 'know'. In French, for example, to know in the *savoir* sense is to know things, facts, names, how and why things work, and so on, whereas to know in the *connaître* sense is to know a person, a place, or even a thing, namely an other, in such a way that one is familiar with or in relationship with this other. Primarily through phenomenological reflection, with a touch of empirical input, this book fleshes out an image for what a person's *connaître* knowing of mathematics might mean, turning to mathematics teachers and teacher educators to help clarify this image.
