offers a compilation of current works that inform the discipline of interior design. These examples of design scholarship present a detailed overview of current research and critical thinking. The volume brings together a broad range of essays from an international group of scholars who represent the diversity of work in the field. Intended to engage those involved in the study and practice of interior design, the Handbook considers the connections between theory, research, and practice that shape the field of interior design, as well as the theoretical perspectives that inform the field. It contains over thirty essays which together demonstrate the wide range of opinions and knowledge in the discipline, grouped in sections to reflect key components of their content. A close reading of the essays will uncover contradictory as well as supporting positions on aspects of interior design, challenging the reader to think critically and develop a personal stance toward the subject.

Becoming Scientists Rusty Bresser, Sharon Fargason, 2023-10-10. Most important to being a good science teacher is holding the expectation that all students can be scientists and think critically. Providing a thinking curriculum is especially important for those children in diverse classrooms who have been underserved by our educational system. Becoming Scientists. Good science starts with a question, perhaps from the teacher at the start of a science unit or from the children as they wonder what makes a toy car move, how food decomposes, or why leaves change color. Using inquiry science, children discover answers to their questions in the same way that scientists do: they design experiments, make predictions, observe, and describe; offer and test explanations; and share their conjectures with others. In essence, they construct their own understanding of how the world works through experimentation, reflection, and discussion. Look into real classrooms where teachers practice inquiry science and engage students in the science and engineering practices outlined in the Next Generation Science Standards. Rusty Bresser and Sharon Fargason show teachers how to do the following: Build on students' varied experiences, background knowledge, and readiness; Respond to the needs of students with varying levels of English language proficiency; Manage a diverse classroom during inquiry science exploration; Facilitate science discussions; Deepen their own science content knowledge. As the authors state, Inquiry science has little to do with textbooks and lectures and everything to do with our inherent need as a species to learn about and reflect on the world around us. Join your students on a journey of discovery as you explore your world via inquiry. Graphic Inquiry Daniel Callison, Annette Lamb, 2012-05-03. This full color book provides a practical approach to incorporating graphic inquiry across the curriculum for school library media specialists, technology coordinators, and classroom teachers. It's new, it's graphic, and it is the first of its kind. Designed to bridge theory and actual practice, Graphic Inquiry contains applications for new and practicing educators and librarians that can truly bring classroom learning into the 21st century. This visually rich book provides numerous standards-based inquiry activities and projects that incorporate traditional materials as well as emerging social and collaborative technologies. This full color book provides real world strategies for integrating graphic inquiry across the curriculum and is specifically designed to help today's educators identify tools and techniques for using graphic inquiry with their students. Although

research is cited and references are provided lengthy text passages are avoided in favor of practical visual examples rooted in best practice and presented in graphic format Readers will view this book as a quick reference to timely realistic activities and approaches as compared to a traditional textbook

Actions of Their Own to Learn ,2017-01-01 What does it mean to take actions of one's own to learn How do human beings create meaning for themselves and with others How can learners' active efforts to build knowledge be encouraged and supported In this edited compilation scholars from a diverse range of academic and professional backgrounds address these questions grounded in the conviction that the ability to take effective action of one's own to learn is itself an essential form of knowledge In an era of dramatic social environmental and political change the need to access vast amounts of information to make decisions demands that learners become active agents in their own knowledge development Educators are transforming ideas about their roles as they strive to provide guidance to help learners take the lead in their own learning Learners are building new ideas about their capacities to gather and organize information while working with others No longer simply consumers of information they are beginning to see themselves as capable and effective researchers Researchers are also expanding ideas about their knowledge gathering work and identities No longer simply reporters of information researchers are seeing themselves as learners as they engage in deeper more collaborative ways with participants in their research Chapter authors describe their dedicated and often career long journeys to show the vital connections between knowledge acting to learn identity and being To engage in this work means disrupting traditional ideas about how knowledge is most effectively acquired This book will inspire researchers educators and educational planners as they build the kinds of new participative structures needed to support individual and collective actions to learn See inside the book
