of the world's wood output and wood supports a major segment of the U S industrial base Trees provide fiber resins oils pulp food paper pharmaceuticals fuel many products used in home construction and numerous other products. The use of wood as a raw material must consider production efficiencies and natural resource conservation as well as efficient profitable use of solid wood its residues and by products. To better assess the use of wood as a raw material the U S Department of Agriculture s Forest Service asked the National Research Council's Board on Agriculture to bring together experts to review the analytical techniques used to follow the life cycle of wood production from tree to product and assess the environmental impacts. This resulting book provides a base of current knowledge identifying what data are lacking where future efforts should be focused and what is known about the methodologies used to assess environmental impacts. The book also focuses on national and international efforts to develop integrated environmental economic and energy accounting methologies.
