Nutrition And Health Nutricion Y Salud:

Global report on the state of dietary data Food and Agriculture Organization of the United Nations, Intake - Center for dietary assessment, 2022-03-09 Diet and nutrition are critical to health well being and longevity. The economic and health burdens associated with poor quality diets are a worldwide concern but for low and middle income countries LMICs the long term impact of these burdens has the potential to be especially devastating. Many of these LMICs are currently grappling with the deepening multiple burdens of malnutrition with undernutrition nutrient inadequacies and overweight and obesity often presenting simultaneously in communities households and even in single individuals. Time relevant data is a necessary and critical component of any process or initiative that aims to ensure healthy diets. Robust data on what people eat in a country enables an understanding of current food consumption practices and provides an evidence based foundation for the design and implementation of targeted and well informed actions policies and messaging to address the key issues related to healthy eating. The purpose of this report is to take stock and celebrate the collection and use of dietary data in LMICs and generate further momentum for investment in government led dietary surveys in LMICs. Section 1 provides a global overview of dietary surveys carried out in LMICs from 1980 through 2019 analysing key characteristics and trends over time. Section 2 celebrates the increased investment in dietary surveys in LMICs by highlighting country stories related to dietary survey initiation implementation and data use. Section 3 is aimed at generating further momentum for investment in government led dietary surveys in LMICs by illustrating through data visualizations the type of information dietary data can provide for policy makers.

WHO country stories: delivering for all World Health Organization, 2023-10-30 Along with the Impact Measurement and the Output Scorecard country case studies are one of the three components of WHO's results reporting framework. The collection of case studies responds to the request of WHO's donors and partners to provide additional information on both the diversity of settings in which WHO is currently working at country level and the variety of approaches that the Organization is using to better serve its Member States. This publication will complement the 2023 WHO Midterm Results Report and will be available to WHO Member States partners and donors online on WHO's public webpages. Each story is directly linked to a GPW13 outcome and provides a snapshot of the Organization's range of efforts to promote health keep the world safe and serve the vulnerable.

Inequality and Nutritional Transition in Economic History Francisco J. Medina-Albaladejo, José Miguel Martínez-Carrión, Salvador Calatayud, 2023-04-13 Food consumption and nutrition are historically among the most characteristic features of inequality in living standards driven by socioeconomic, gender, generational and geographical reasons. Nutrition directly impacts mortality, life expectancy, height and illness and thus becomes a good indicator of living standards and their evolution over time. However, one issue that remains unresolved is how to measure past diet inequalities with the available sources. This book evaluates nutritional inequalities in Spain from the nineteenth century to the present.

day It explores the socioeconomic gender generational and geographical variations in food consumption and nutrition in Spain during this period Deriving historical data on nutrition and diet has always been difficult due to issues with available sources This book adopts a multi dimensional approach and two complementary methodologies capable of presenting a more comprehensive picture the first analyses diets based on primary sources while the second examines the effect of nutritional inequalities on biological living standards with special emphasis on average height This combination allows for greater precision than previous studies on the impacts of food inequality This book will be of significant interest to scholars from different academic branches especially historians economic historians and historians of science economists and also doctors endocrinologists paediatricians anthropologists nutritionists and expert in cooperation and development ***OECD-FAO***
