Nutritional Biochemistry:

Nutritional Biochemistry Tom Brody, 1998-12-21 Nutritional Biochemistry takes a scientific approach to nutrition. It covers not just what nutritional requirements but why they are required for human health by describing their function at the cellular and molecular level. Each case study either leads to a subsequent discovery or enables an understanding of the physiological mechanisms of action of various nutrition-related processes. The text is picture-oriented and the commentary is directed towards explaining graphs, figures, and tables. Nutritional Biochemistry includes a discussion of relevant aspects of physiology, food chemistry, toxicology, pediatrics, and public health. Experimental techniques for nutritional science are emphasized, and primary data is included to help give students a feel for the nutrition literature. This real-world approach provides students with a realistic view of the basis for much of our understanding of nutritional biochemistry. Integrates biochemistry and nutrition in a case-oriented method. Emphasizes a hands-on approach to learning case histories and clinical and research data illustrate all major points. Places emphasis on metabolism, metabolic pathways, enzymology, nutrient requirements including RDA values. Reveals the benefits of the Mediterranean diet, the biochemistry of exercise, the cell signaling pathways, how nutrition can influence the development of cancer, and the anthropometry and genetics of obesity.

Nutritional Biochemistry: From the Classroom to the Research Bench Sami Dridi, 2022-03-14 Nutritional Biochemistry From the Classroom to the Research Bench aims to provide students and readers with a detailed, simplified, and comprehensive account of the relationship between nutrition and metabolism. A key feature of this textbook is a comparative approach on the subject of nutritional biochemistry which helps to explain the differences in metabolism, nutrient requirement, and sometimes in the molecular pathways between mammalian and non-mammalian species. Chapters give an overview of the need of food and water, chapter 1 before describing the cell and organ system components, chapter 2. The textbook then focuses on the regulation of food intake from the factors influencing appetite to the central and peripheral underlying mechanisms, chapters 3-5. Water intake and regulation in the body are covered, chapter 6, along with key topics of protein, carbohydrate, and lipid metabolism, chapters 7-9, including their digestion, absorption, transport, utilization, synthesis, degradation, and molecular regulation. A brief summary concludes the book. Chapter 10. This book serves as a textbook for students and faculty in beginner courses in biochemistry and nutrition and is designed to give learners a comprehensive understanding of the topic to help them when considering a career in research. **Nutritional**
