JOHN HARTWIG

The background of the cover features an abstract graphic design. Two wavy, overlapping lines, one green and one blue, flow across the page. The green line is positioned above the blue line. The background is dark, with horizontal bands of color: a dark green band at the top, a dark blue band in the middle, and a lighter blue band at the bottom. The lines and bands create a sense of movement and depth.

Organotransition Metal Chemistry John F. Hartwig, 2010-02-10 Based on Collman et al s best selling classic book Principles and Applications of Organotransition Metal Chemistry Hartwig s text consists of new or thoroughly updated and restructured chapters and provides an in depth view into mechanism reaction scope and applications It covers the most important developments in the field over the last twenty years with great clarity with a selective but thorough and authoritative coverage of the fundamentals of organometallic chemistry the elementary reactions of these complexes and many catalytic processes occurring through organometallic intermediates making this the Organotransition Metal Chemistry text for a new generation of scientists *Organotransition Metal Chemistry A Mechanistic Approach* Richard Heck, 2012-12-02 Organotransition Metal Chemistry A Mechanistic Approach describes a mechanistic approach to the study of the chemistry of organotransition metals Organotransition metals are discussed in relation to their reactions with specific functional groups or types of compounds rather than by metals Topics covered include the formation of hydrogen and carbon bonds to transition metals reactions of transition metal and bonded derivatives and addition and elimination reactions of olefinic compounds This book is comprised of 10 chapters and begins with a historical overview of organotransition metal chemistry together with the unique chemistry of transition metals and mechanisms of ligand replacements The following chapters discuss the methods of preparation of hydrido complexes and carbon transition metal bonds homogeneous hydrogenation reactions isomerization dimerization oligomerization and polymerization of olefins and reactions of dienes trienes and tetraenes with transition metal compounds Transition metal reactions with acetylenes and carbon monoxide as well as organic carbonyl compounds are also examined This monograph should be of value to organic chemists as well as students and researchers of organic chemistry *Organotransition Metal Chemistry* Akio Yamamoto, 1986 A systematic readable treatment of organotransition metal chemistry that provides students teachers and practicing chemists with an understanding of basic concepts in catalysis and synthetic procedures using transition metal reagents Covers basic principles of coordination chemistry organometallic compounds of transition metals and non transition metals reactions industrial applications use in synthesis methods of manipulation for air sensitive compounds and an overview of related topics Well illustrated with figures and formulae *Organotransition Metal Chemistry* A.
