Niskanen, **Bureaucracy and Representative Government Jr.**

Niskanen, 2017-09-29 This is the first book to develop a formal theory of supply by bureaus Niskanen develops an original and comprehensive theory of the behavior of bureaus with the institutions of representative government He challenges the traditional view that monopoly bureaus are the best way to organize the public sector and he suggests ways to use competitive bureaus and private firms to perform operations such as delivering mail fighting wars or running schools more efficiently than the present government agencies The theory concludes that most bureaus are too large grow too fast use too much capital and exploit their sponsor His theory explains the relation of the output and budget of a bureau to demand and cost decisions It compares bureaus with other forms of organization facing like conditions and delineates the production and

investment behavior of a bureau the behavior of nonprofit firms with no sponsor the behavior of mixed bureaus with financing from a sponsor and from the sale of services the effects of competition between a bureau and a competitive industry The book also develops a simple theory of the market for public services financed through a representative government the final section suggests a set of changes to improve the performance of our bureaucratic and political institutions based both on theory and Niskanen's professional experience It is essential reading for professionals and students in the social sciences and could prove instrumental in reforming some of our government institutions

The Science of Bureaucracy David Demortain, 2020-01-21 How the US Environmental Protection Agency designed the governance of risk and forged its legitimacy over the course of four decades The US Environmental Protection Agency was established in 1970 to protect the public health and environment administering and enforcing a range of statutes and programs Over four decades the EPA has been a risk bureaucracy formalizing many of the methods of the scientific governance of risk from quantitative risk assessment to risk ranking Demortain traces the creation of these methods for the governance of risk the controversies to which they responded and the controversies that they aroused in turn He discusses the professional networks in which they were conceived how they were

used and how they served to legitimize the EPA Demortain argues that the EPA is structurally embedded in controversy resulting in constant reevaluation of its credibility and fueling the evolution of the knowledge and technologies it uses to produce decisions and to create a legitimate image of how and why it acts on the environment He describes the emergence and institutionalization of the risk assessment risk management framework codified in the National Research Council's Red Book and its subsequent unraveling as the agency's mission evolved toward environmental justice ecological restoration and sustainability and as controversies over determining risk gained vigor in the 1990s Through its rise and fall at the EPA risk decision making enshrines the science of a bureaucracy that learns how to make credible decisions and to reform itself amid constant conflicts about the environment risk and its own legitimacy The State of Public Bureaucracy Larry B.
