break or hinder the current of breath producing a division into syllables The poet's recognition and selection of syllables for the purposes of versification far from being a highly artificial process is mainly subconscious His standard and criterion are not the dictionary nor words sounded separately but audible fluent speech And so it not infrequently happens that when one word is merged into another the result is a syllable that embraces parts of two words To read Latin poetry well one must bring out distinctly the sound properties of the syllables some of these properties being inherent in the separate syllables some resulting from the effect one syllable has upon another 6What in detail are these properties A syllable comprises a vowel alone a diphthong alone or either in close union with one or more consonants Latin vowels according to the ancients fell into three classes 1 those of brief duration and therefore considered short 2 those more extended in time and therefore considered long and 3 those occurring in closely knit pairs called diphthongs the same being long Consonants seemed to affect the
