Readings in Computer Vision Martin A. Fischler, Oscar Firschein, 1987-06 The field of computer vision combines techniques from physics mathematics psychology artificial intelligence and computer science to examine how machines might construct meaningful descriptions of their surrounding environment. The editors of this volume prominent researchers and leaders of the SRI International AI Center Perception Group have selected sixty papers most published since 1980 with the viewpoint that computer vision is concerned with solving seven basic problems Reconstructing 3D scenes from 2D images Decomposing images into their component parts Recognizing and assigning labels to scene objects Deducing and describing relations among scene objects Determining the nature of computer architectures that can support the visual function Representing abstractions in the world of computer memory Matching stored descriptions to image representation Each chapter of this volume addresses one of these problems through an introductory discussion which identifies major ideas and summarizes approaches and through reprints of key research papers Two appendices on crucial assumptions in image interpretation and on parallel architectures for vision applications a glossary of technical terms and a comprehensive bibliography and index complete the volume **Readings in Computer Vision** Martin A. Kak, Avi Kak, Su-shing Chen, 1987-10 Spatial Reasoning and Multi Sensor Fusion **Graph-Based Representations in Pattern Recognition** Andrea Torsello, Francisco Escolano Ruiz, Luc Brun, 2009-07-09 This book constitutes the refereed proceedings of the 7th IAPR TC 15 International Workshop on Graph Based Representations in Pattern Recognition GbRPR 2009 held in Venice Italy in May 2009 The 37 revised full papers presented were carefully reviewed and selected from 47 submissions. The papers are organized in topical sections on graph based representation and recognition graph matching graph clustering and classification pyramids combinatorial maps and homologies as well as graph based segmentation **Soft Computing for Knowledge Discovery** James G. Shanahan, 2012-12-06 Knowledge discovery is an area of computer science that attempts to uncover interesting and useful patterns in data that permit a computer to perform a task autonomously or assist a human in performing a task more efficiently Soft Computing for Knowledge Discovery provides a self contained and systematic exposition of the key theory and algorithms that form the core of knowledge discovery from a soft computing perspective It focuses on knowledge representation machine learning and the key methodologies that make up the fabric of soft computing fuzzy set theory fuzzy logic evolutionary computing and various theories of probability e.g. na ve Bayes and Bayesian networks Dempster Shafer theory mass assignment theory and others In addition to describing many state of the art soft computing approaches to knowledge discovery the author introduces Cartesian granule features and their corresponding learning algorithms as an intuitive approach to knowledge discovery. This new approach embraces the synergistic spirit of soft computing and exploits uncertainty in order to achieve tractability transparency and generalization Parallels are drawn between this approach and other well known approaches such as naive Bayes and decision trees leading to equivalences under certain conditions The approaches presented are further illustrated in a battery of both artificial and real world problems Knowledge discovery in real world problems such as object recognition in outdoor scenes medical diagnosis and control is described in detail These case studies provide further examples of how to apply the presented concepts and algorithms to practical problems The author provides web page access to an online bibliography datasets source codes for several algorithms described in the book and other information Soft Computing for Knowledge Discovery is for advanced undergraduates professionals and researchers in computer science engineering and business information systems who work or have an interest in the dynamic fields of knowledge discovery and soft computing **Energy Minimization Methods in**

Computer Vision and Pattern Recognition Alan L. Yuille, Song-Chun Zhu, Daniel Cremers, Yongtian Wang, 2007-08-14 This book constitutes the refereed proceedings of the 6th International Conference on Energy Minimization Methods in Computer Vision and Pattern Recognition held in Ezhou China in August 2007 Twenty two full papers are presented along with fifteen poster papers The papers are organized into topical sections on algorithms applications image parsing image processing motion shape and three dimensional processing Digital Image Processing Bernd Jähne, 2013-03-09 Intended as a practical guide the book takes the reader from basic concepts to up to date research topics in digital image processing Only little special knowledge in computer sciences is required since many principles and mathematical tools widely used in natural sciences are also applied in digital image processing thus the reader with a general background in natural science gets an easy access to the material presented The book discusses the following topics image acquisition and digitization linear and nonlinear filter operations edge detection local orientation and texture fast algorithms on pyramidal and multigrid data structures morphological operations to detect the shape of objects segmentation and classification Further chapters deal with the reconstruction of three dimensional objects from projections and the analysis of stereo images and image sequences with differential correlation and filter algorithms Many examples from different areas show how the reader can use digital image processing as an experimental tool for image data acquisition and evaluation in his or her research area Networks for Vision, Speech and Natural Language R. Linggard, D.J. Myers, C. Nightingale, 2012-12-06 This book is a collection of chapters describing work carried out as part of a large project at BT Laboratories to study the application of connectionist methods to problems in vision speech and natural language processing Also since the theoretical formulation and the hardware realization of neural networks are significant tasks in themselves these problems too were addressed The book therefore is divided into five Parts reporting results in vision speech natural language hardware implementation and network architectures The three editors of this book have at one time or another been involved in planning and running the connectionist project From the outset we were concerned to involve the academic community as widely as possible and consequently in its first year over thirty university research groups were funded for small scale studies on the various topics Co ordinating such a widely spread project was no small task and in order to concentrate minds and resources sets of test problems were devised which were typical of the application areas and were difficult enough to be worthy of study These are described in the text and constitute one of the successes of the project Smart Algorithms for Multimedia and Imaging Michael N. Rychagov, Ekaterina V. Tolstaya, Mikhail Y. Sirotenko, 2021-05-05 This book presents prospective industrially proven methods and software solutions for storing processing and viewing multimedia content on digital cameras camcorders TV and mobile devices Most of the algorithms described here are implemented as systems on chip firmware or as software products and have low computational complexity and memory consumption In the four parts of the book which contains a total of 16 chapters the authors address solutions for the conversion of images and videos by super resolution depth

estimation and control and mono to stereo 2D to 3D conversion display applications by video editing the real time detection of sport episodes and the generation and reproduction of natural effects The practical principles of machine learning are illustrated using technologies such as image classification as a service mobile user profiling and automatic view planning with dictionary based compressed sensing in magnetic resonance imaging The implementation of these technologies in mobile devices is discussed in relation to algorithms using a depth camera based on a colour coded aperture the animated graphical abstract of an image a motion photo and approaches and methods for iris recognition on mobile platforms The book reflects the authors practical experience in the development of algorithms for industrial R Offers essential algorithms for the processing pipeline in multimedia devices and accompanying software tools Features advanced topics on data processing addressing current technology challenges Towards Hybrid and Adaptive Computing Anupam Shukla, Ritu Tiwari, Rahul Kala, 2010-09-18 Soft Computing today is a very vast field whose extent is beyond measure The boundaries of this magnificent field are spreading at an enormous rate making it possible to build computationally intelligent systems that can do virtually anything even after considering the hostile practical limitations Soft Computing mainly comprising of Artificial Neural Networks Evolutionary Computation and Fuzzy Logic may itself be insufficient to cater to the needs of various kinds of complex problems In such a scenario we need to carry out amalgamation of same or different computing approaches along with heuristics to make fabulous systems for problem solving There is further an attempt to make these computing systems as adaptable as possible where the value of any parameter is set and continuously modified by the system itself This book first presents the basic computing techniques draws special attention towards their advantages and disadvantages and then motivates their fusion in a manner to maximize the advantages and minimize the disadvantages Conceptualization is a key element of the book where emphasis is on visualizing the dynamics going inside the technique of use and hence noting the shortcomings A detailed description of different varieties of hybrid and adaptive computing systems is given paying special attention towards conceptualization and motivation Different evolutionary techniques are discussed that hold potential for generation of fairly complex systems The complete book is supported by the application of these techniques to biometrics This not only enables better understanding of the techniques with the added application base it also opens new dimensions of possibilities how multiple biometric modalities can be fused together to make effective and scalable Artificial Intelligence and Soft Computing Leszek Rutkowski, Marcin Korytkowski, Rafal Scherer, Ryszard systems Tadeusiewicz, Lotfi A. Zadeh, Jacek M. Zurada, 2015-06-04 The two volume set LNAI 9119 and LNAI 9120 constitutes the refereed proceedings of the 14th International Conference on Artificial Intelligence and Soft Computing ICAISC 2015 held in Zakopane Poland in June 2015 The 142 revised full papers presented in the volumes were carefully reviewed and selected from 322 submissions These proceedings present both traditional artificial intelligence methods and soft computing techniques The goal is to bring together scientists representing both areas of research The first volume covers topics as

follows neural networks and their applications fuzzy systems and their applications evolutionary algorithms and their applications classification and estimation computer vision image and speech analysis and the workshop large scale visual recognition and machine learning The second volume has the focus on the following subjects data mining bioinformatics biometrics and medical applications concurrent and parallel processing agent systems robotics and control artificial intelligence in modeling and simulation and various problems of artificial intelligence Markov Networks in Evolutionary Computation Siddhartha Shakya, Roberto Santana, 2012-04-23 Markov networks and other probabilistic graphical modes have recently received an upsurge in attention from Evolutionary computation community particularly in the area of Estimation of distribution algorithms EDAs EDAs have arisen as one of the most successful experiences in the application of machine learning methods in optimization mainly due to their efficiency to solve complex real world optimization problems and their suitability for theoretical analysis This book focuses on the different steps involved in the conception implementation and application of EDAs that use Markov networks and undirected models in general It can serve as a general introduction to EDAs but covers also an important current void in the study of these algorithms by explaining the specificities and benefits of modeling optimization problems by means of undirected probabilistic models All major developments to date in the progressive introduction of Markov networks based EDAs are reviewed in the book Hot current research trends and future perspectives in the enhancement and applicability of EDAs are also covered The contributions included in the book address topics as relevant as the application of probabilistic based fitness models the use of belief propagation algorithms in EDAs and the application of Markov network based EDAs to real world optimization problems The book should be of interest to researchers and practitioners from areas such as optimization evolutionary computation and machine learning Image Content Retargeting Alessandro Artusi, Francesco Banterle, Tunc Ozan Aydın, Daniele Panozzo, Olga Sorkine-Hornung, 2016-08-05 In recent years visual devices have proliferated from the massive high resolution high contrast screens to the tiny ones on mobile phones with their limited dynamic range and color gamut The wide variety of screens on which content may be viewed creates a challenge for developers Adapting visual content for optimized viewing on all devices is called retargeting This is the first book to provide a holistic view of the subject thoroughly reviewing and analyzing the many techniques that have been developed for retargeting along dimensions such as color gamut dynamic Spatial Vision in Humans and Robots Laurence Harris, Michael Jenkin, 1993 A book of great range and spatial resolution interest both to biological researchers and also to designers of robots and computer vision systems The Human Semantic Potential Terry Regier, 1996 Drawing on ideas from cognitive linguistics connectionism and perception The Human Semantic Potential describes a connectionist model that learns perceptually grounded semantics for natural language in spatial terms Languages differ in the ways in which they structure space and Regier's aim is to have the model perform its learning task for terms from any natural language The system has so far succeeded in learning spatial terms from English German Russian

Japanese and Mixtec The model views simple movies of two dimensional objects moving relative to one another and learns to classify them linguistically in accordance with the spatial system of some natural language The overall goal is to determine which sorts of spatial configurations and events are learnable as the semantics for spatial terms and which are not Ultimately the model and its theoretical underpinnings are a step in the direction of articulating biologically based constraints on the nature of human semantic systems Along the way Regier takes up such substantial issues as the attraction and the liabilities of PDP and structured connectionist modeling the problem of learning without direct negative evidence and the area of linguistic universals which is addressed in the model itself Trained on spatial terms from different languages the model permits observations about the possible bases of linguistic universals and interlanguage variation Modern Photogrammetry Edward M. Mikhail, James S. Bethel, J. Chris McGlone, 2001-03-26 This text is designed to give students a strong grounding in the mathematical basis of photogrammetry while introducing them to related fields such as remote sensing and digital image processing Suitable for undergraduate photogrammetry courses typically aimed at junior and senior students and for graduate level courses at the Master's level Excellent reference for those working in related RoboCup 2011: Robot Soccer World Cup XV Thomas Roefer, N. Michael Mayer, Jesus Savage, Uluc fields Saranlı, 2012-07-23 This book includes the thoroughly refereed post conference proceedings of the 15th Annual RoboCup International Symposium held in Istanbul Turkey in July 2011 The 12 revised papers and 32 poster presentation presented were carefully reviewed and selected from 97 submissions. The papers are orginazed on topical sections on robot hardware and software perception and action robotic cognition and learning multi robot systems human robot interaction education and edutainment and applications Artificial Intelligence Nils J. Nilsson, 1998-04-17 Intelligent agents are employed as the central characters in this new introductory text Beginning with elementary reactive agents Nilsson gradually increases their cognitive horsepower to illustrate the most important and lasting ideas in AI Neural networks genetic programming computer vision heuristic search knowledge representation and reasoning Bayes networks planning and language understanding are each revealed through the growing capabilities of these agents The book provides a refreshing and motivating new synthesis of the field by one of AI s master expositors and leading researchers Artificial Intelligence A New Synthesis takes the reader on a complete tour of this intriguing new world of AI An evolutionary approach provides a unifying theme Thorough coverage of important AI ideas old and new Frequent use of examples and illustrative diagrams Extensive coverage of machine learning methods throughout the text Citations to over 500 references Comprehensive index Human Symmetry Perception and Its Computational Analysis Christopher W.
