

PERCEPTION

- Perception is the process by which agents interpret and organize sensation to produce a meaningful experience of the world.
- It also means turning information from one form into new, meaningful representations.
- Typical sensory modalities:
 - Light - Vision
 - Air vibrations(sound) - Audition(hearing) , echolocation
 - Physical pressure - Haptics(touch)
 - Chemicals - Taste and olfaction(smell)
 - Body position - Kinesthetics / proprioception
 - Atypical - senses in the bowel, stomach, pain receptors, heat receptors etc.
- Human Vision:
 - Extramission theory: Rays of light emanating from the eye combine with light in the world to allow us see.
 - Intromission theory: sight is possible because rays of light are reflected from objects into our eyes.
 - You can nalso get light directly from light sources.
- Human Eye:
 - In a camera you can focus by changing the distance between two lenses.
 - In the eye the lens is flexible and is stretched by two muscles to help focus.
 - The reason why people's vision worse as they get older is because the lens becomes more brittle over time.
 - We have receptors/cells at the back of our eyes that get active when hit by light energy(photons).
 - Neurons have a firing rate, and it increases when they are activated.
 - Neurons in your eye will decrease their frequency according to whether or not light is touching them.
- Types of receptors on retina:
 - 1. Rods: rods are the most light sensitive photo receptive cells in the retina(responsible for night vision); rods direct your vision, rods detect motion. Located outside the fovea.
 - 2. Cones: Cones are more sensitive to colour, three different kinds of receptors(red-long wavelengths, green - medium wavelengths , blue - short wavelengths) , works best in bright light.
 - Some people(and they are only women) can see four different detectors or more than these three colours.
- Depth Perception:
 - S - Size: we know how big things are.
 - P - Perspective: things are smaller on the fovea as they get farther.
 - O - Occlusion: when one thing is infront of another.
 - T - Texture, Shading and saturation - Closer things are more saturated. The atmosphere takes away saturation

Readings In Perception

David Cromwell Beardslee

Readings In Perception:

Readings in Perception David C. Beardslee, David Cromwell Beardslee, Michael Wertheimer, 1958 Readings in Perception, 1963 **Readings in Perception** David Cromwell Beardslee, 1963 **Readings in Perception** Peter A. Fried, 1974 **Visual Perception** Steven Yantis, 2001 **Readings in Perception. Selected and Edited by D.C. Beardslee ... and M. Wertheimer** David Cromwell BEARDSLEE (and WERTHEIMER (Michael)), Michael Wertheimer, 1958 **Readings in Perception** David Cromwell Beardslee, Michael Wertheimer, 1958 **Readings in Perception. Selected and Ed. by David C[romwell] Beardslee, ... and Michael Wertheimer,** David Cromwell Beardslee, Michael Wertheimer, 1964 *Readings in Perception. Selected and Edited by David C. Beardslee and Michael Wertheimer* David Cromwell Beardslee, 1964 **Vision and Mind** Alva Noë, Evan Thompson, 2002-10-25 The philosophy of perception is a microcosm of the metaphysics of mind Its central problems What is perception What is the nature of perceptual consciousness How can one fit an account of perceptual experience into a broader account of the nature of the mind and the world are at the heart of metaphysics Rather than try to cover all of the many strands in the philosophy of perception this book focuses on a particular orthodoxy about the nature of visual perception The central problem for visual science has been to explain how the brain bridges the gap between what is given to the visual system and what is actually experienced by the perceiver The orthodox view of perception is that it is a process whereby the brain or a dedicated subsystem of the brain builds up representations of relevant figures of the environment on the basis of information encoded by the sensory receptors Most adherents of the orthodox view also believe that for every conscious perceptual state of the subject there is a particular set of neurons whose activities are sufficient for the occurrence of that state Some of the essays in this book defend the orthodoxy most criticize it and some propose alternatives to it Many of the essays are classics Contributors G E M Anscombe Dana Ballard Daniel Dennett Fred Dretske Jerry Fodor H P Grice David Marr Maurice Merleau Ponty Zenon Pylyshyn Paul Snowdon and P F Strawson **Perception; Selected Readings in Science and Phenomenology** Paul Tibbetts, 1969 *NBS Special Publication*, 1980 **Readings in General Psychology** Edward Stevens Robinson, Florence Richardson-Robinson, 1929 **Actological Readings in Continental Philosophy** Malcolm Torry, 2023-01-12 Actological Readings in Continental Philosophy is what it says it is The book asks how we might understand the writings of a number of continental philosophers actologically that is with reality understood as action in changing patterns rather than as beings that change It also asks how the different continental philosophies might enable us to develop an actology an understanding of reality as action in changing patterns The philosophers whom we study are Immanuel Kant Friedrich Nietzsche Edmund Husserl Martin Heidegger Emmanuel Levinas Gilles Deleuze Hans Georg Gadamer Maurice Merleau Ponty Gaston Bachelard Michel Foucault and Michel Serres A whole new way of understanding reality casts new light on their philosophies and raises and answers some significant new questions **Building for People** Arthur I. Rubin, Jacqueline Elder, United States.

National Bureau of Standards,1980 Readings in Computer Vision Martin A. Fischler,Oscar Firschein,2014-06-28 The field of computer vision combines techniques from physics mathematics psychology artificial intelligence and computer science to examine how machines might construct meaningful descriptions of their surrounding environment The editors of this volume prominent researchers and leaders of the SRI International AI Center Perception Group have selected sixty papers most published since 1980 with the viewpoint that computer vision is concerned with solving seven basic problems Reconstructing 3D scenes from 2D images Decomposing images into their component parts Recognizing and assigning labels to scene objects Deducing and describing relations among scene objects Determining the nature of computer architectures that can support the visual function Representing abstractions in the world of computer memory Matching stored descriptions to image representation Each chapter of this volume addresses one of these problems through an introductory discussion which identifies major ideas and summarizes approaches and through reprints of key research papers Two appendices on crucial assumptions in image interpretation and on parallel architectures for vision applications a glossary of technical terms and a comprehensive bibliography and index complete the volume *Computational Models of Reading* Erik D. Reichle,2021 Computational Models of Reading is a reference book that can be used to learn about reading research and how computer models have been used to explain and simulate the mental processes involved in reading These mental processes include the identification of printed words the active construction of larger units of meaning for example of sentences and the integration of the latter into memory so that a text can be understood and remembered The final chapter describes a new model of reading in its entirety and then reports simulations showing how it explains important findings related to reading
