

Financial Accounting Applications

WEEK 1 - INTRODUCTION TO FINANCIAL ACCOUNTING APPLICATIONS

Financial & Management Accounting

Financial Accounting is the preparation and presentation of financial information that enables users to make economic decisions regarding the entity/business. **General Purpose Financial Statements (GPFS)** are prepared to meet the information needs common to users who are unable to command reports to suit their own needs. **Special Purpose Financial Statements** are prepared to suit a specific purpose and do not cater for the generalised needs common to most users.

This information is governed by the generally accepted accounting principles (**GAAP**), which provide accounting standards for preparing financial statements. Financial accounting is also guided by rules set out in the **Corporations Act** and the **Listing Rules of the ASX**. Financial accounting is traditionally based on historical figures that stem from the original transaction; **for example**, the purchase of a building for \$500,000 would be shown in the financial statement as an asset of \$500,000. Even though the 500K may not reflect the current market value of the building, the building is still shown at its historical cost, which is the original amount paid for the asset.

Management accounting is a field of accounting that provides economic information for internal users, that is, owners and management. The core activities of management accounting include formulating plans and budgets, and providing information to be used in the monitoring and control of different parts of an entity. Management accounting reports are bound by few rules and are therefore less formal.

Transactions that affect the entity's financial position are taken into consideration. They must be able to be reliably measured and recorded.	This stage includes the analysis, recording and classification of business transactions.	Accounting information is communicated through various reports such as the statement of profit or loss, statement of financial positions and statement of cash flows.	Accounting information is used for a range of decisions by external and internal users.
