Readings From Left To Right

Carol Mason

Readings From Left To Right:

Reading Appalachia from Left to Right Carol Mason, 2011-02-23 In *Reading Appalachia from Left to Right* Carol Mason examines the legacies of a pivotal 1974 curriculum dispute in West Virginia that heralded the rightward shift in American culture and politics. At a time when black nationalists and white conservatives were both maligned as extremists for opposing education reform, the wife of a fundamentalist preacher who objected to new language arts textbooks featuring multiracial literature sparked the yearlong conflict. It was the most violent textbook battle in America, inspiring mass marches, rallies by white supremacists, boycotts by parents, and strikes by coal miners. Schools were closed several times due to arson and dynamite while national and international news teams descended on Charleston. A native of Kanawha County, Mason infuses local insight into this study of historically left-leaning protesters ushering in cultural conservatism. Exploring how reports of the conflict as a hillbilly feud affected all involved, she draws on substantial archival research and interviews with Klansmen, evangelicals, miners, bombers, and businessmen, all of whom like herself were residents of Kanawha County during the dispute. Mason investigates vulgar accusations of racism that precluded a richer understanding of how ethnicity, race, class, and gender blended together as white protesters set out to protect their children's souls. In the process, she demonstrates how the significance of the controversy goes well beyond resistance to social change on the part of Christian fundamentalists or a cultural clash between elite educators and working-class citizens. The alliances, tactics, and political discourses that emerged in the Kanawha Valley in 1974 crossed traditional lines, inspiring innovations in neo-Nazi organizing, propelling Christian conservatism into the limelight, and providing models for women of the New Right.

The Psychology of Left and Right Michael C. Corballis, Ivan L. Beale, 2020-09-10 Originally published in 1976, this title deals with the problem of how we tell left from right. The authors argue that the ability to tell left from right depends ultimately on a bodily asymmetry, such as preference for one or the other hand, or dominance of one side of the brain. This has implications for child development, reading disability, navigation, art, and culture.

Politicians' Reading of Public Opinion and its Biases Stefaan Walgrave, Karolin Soontjens, Julie Sevenans, 2022-08-15 Examining a central assumption widely accepted as being crucial in making democracy work that politicians form a more or less accurate image of public opinion and take that perception into account when representing citizens *Politicians Reading of Public Opinion and its Biases* presents a paradox of representation On the one hand politicians invest enormously in reading public opinion They are committed to finding out what the people want and public opinion is a key consideration in many of their undertakings Yet on the other hand politicians perceptions of public opinion are surprisingly inaccurate Politicians are hardly better at estimating public opinion than ordinary citizens are Their perceptions are distorted by social projection in the sense that politicians own opinion affects their estimations and on top of that there seems to be a systematic right wing bias in these perceptions The findings imply that one of the main paths to responsive policy making is flawed Even though politicians do the best they can to learn about people s preferences skewed perceptions put them on the wrong track From a democratic perspective the central findings of the book are quite sobering The high hopes that many authors had with regard to politicians ability to adequately consult or sense public opinion appear to be vain The book puts forward a plausible driver of the slippage between the public and politics Politicians are less responsive to people s preferences than they could be not because they do not want to be responsive but because they base themselves on erroneous public opinion perceptions

Reading as a Perceptual Process A. Kennedy, D. Heller, J. Pynte, Ralph Radach, 2000-08-04 This book is divided into five sections dealing with various fundamental issues in current research attention information processing and eye movement control the role of phonology in reading syntax and discourse processing and computational models and simulations Control

and measurement of eye movements form a prominent theme in the book A full understanding of the where and when of eye movement control is a prerequisite of any complete theory of reading since it is precisely at this point that perceptual and cognitive processes interact Amongst the hot topics included are the relation between parafoveal and foveal visual processing of linguistic information the role of phonology in fluent reading and the emergence of statistical tuning approaches to sentence parsing Also discussed in the book are three attempts to develop quantitative models of reading which represent a significant departure in theory building and a quantum step in the maturation of reading research Much of the work reported in the book was first presented at the 5th European Workshop on Language Comprehension organised in April 1998 which was held at the CNRS Luminy Campus near Marseilles All contributions summarise the state of the art in the relevant areas of reading research

A Manual of Practical Physical Chemistry Francis William Gray,1914 The Psychology of Reading Mildred C. Robeck,Randall R. Wallace,2017-11-06 The need to know why as well as how children and youth respond as they do to reading instruction has guided the selection of this book s content The second edition of this title originally published in 1990 has retained and elaborated upon the three major themes previously presented that reading is a linguistic process that motivation the affective domain may be as important in learning to read as the cognitive domain and that the reality of learning theory is to be found in the mechanisms of the brain where information is mediated and memory traces are stored The text integrates views from cognitive psychology psycholinguistics and neuropsychology as they relate to reading and writing A learning motivation model is provided to present associative learning conceptualization and self directed reading in a hierarchical relationship with distinct cognitive and affective components The distinction between beginning and proficient reading is maintained throughout the text
