Principles of Knowledge Representation and Reasoning Bernhard Nebel, Charles Rich, William R. Swartout, 1992 Stringently reviewed papers presented at the October 1992 meeting held in Cambridge Mass address such topics as nonmonotonic logic taxonomic logic specialized algorithms for temporal spatial and numerical reasoning and knowledge representation issues in planning diagnosis and natural language

Principles of Knowledge Representation and Reasoning James Allen, Richard E. Fikes, Erik Sandewall, 1991 The proceedings of the Second International Conference on title held in Cambridge Massachusetts April 1991 comprise 55 papers on topics including the logical specifications of reasoning behaviors and representation formalisms comparative analysis of competing algorithms and formalisms and analysis

Principles of Knowledge Representation and Reasoning Anthony G. Cohn, Lenhart Schubert, Stuart Charles Shapiro, 1998

Readings in Planning James Allen, James A. Hendler, Austin Tate, 1990 This book presents four contributions to planning research within an integrated framework James Allen offers a survey of his research in the field of temporal reasoning and then describes a planning system formalized and implemented directly as an inference process in the temporal logic Starting from the same logic Henry Kautz develops the first formal specification of the plan recognition process and develops a powerful family of algorithms for plan recognition in complex situations Richard Pelavin then extends the temporal logic with model operators that allow the representation to support reasoning about complex planning situations involving simultaneous interacting actions and interaction with external events Finally Josh Tenenbarg introduces two different formalisms of abstraction in planning systems and explores the properties of these abstraction techniques in depth

Practical Planning David E. Wilkins, 2014-06-28 Planning or reasoning about actions is a fundamental element of intelligent behavior and one that artificial intelligence has found very difficult to implement The most well understood approach to building planning systems has been under refinement since the late 1960s and has now reached a level of maturity where there are good prospects for building working planners Practical Planning is an in depth examination of this classical planning paradigm through an intensive case study of SIPE a significantly implemented planning system The author the developer of SIPE defines the planning problem in general explains why reasoning about actions is so complex and describes all parts of the SIPE system and the algorithms needed to achieve efficiency Details are discussed in the context of problems and important issues in building a practical planner discussions of how other systems address these issues are also included Assuming only a basic background in AI Practical Planning will be of great interest to professionals interested in incorporating planning capabilities into AI systems

An Integrated

Approach to Hierarchical Planning, Plan-execution, and On-line Learning in Uncertain Continuous Domains Torsten Berger,1998 *Representations of Commonsense Knowledge* Ernest Davis,2014-07-10 *Representations of Commonsense Knowledge* provides a rich language for expressing commonsense knowledge and inference techniques for carrying out commonsense knowledge This book provides a survey of the research on commonsense knowledge Organized into 10 chapters this book begins with an overview of the basic ideas on artificial intelligence commonsense reasoning This text then examines the structure of logic which is roughly analogous to that of a programming language Other chapters describe how rules of universal validity can be applied to facts known with absolute certainty to deduce other facts known with absolute certainty This book discusses as well some prominent issues in plausible inference The final chapter deals with commonsense knowledge about the interrelations and interactions among agents and discusses some issues in human and social interactions that have been studied in the artificial intelligence literature This book is a valuable resource for students on a graduate course on knowledge representation **Concurrent Reactive Plans** Michael Beetz,2003-06-29 In this book the author presents a new computational model of forestalling common flaws in autonomous robot behavior To this end robots are equipped with structured reactive plans SRPs which are concurrent control programs that can not only be interpreted but also be reasoned about and manipulated The author develops a representation for SRPs in which declarative statements for goals perceptions and beliefs make the structure and purpose of SRPs explicit and thereby simplify and speed up reasoning about SRPs and their projections furthermore a notation is introduced allowing for transforming and manipulating SRPs Using this notation a planning system can diagnose and forestall common flaws in robot plans that cannot be dealt with in other planning representations Finally the language for writing SRPs is extended into a high level language that can handle both planning and execution actions *Principles of Semantic Networks* John F. Sowa,2014-07-10 *Principles of Semantic Networks Explorations in the Representation of Knowledge* provides information pertinent to the theory and applications of semantic networks This book deals with issues in knowledge representation which discusses theoretical topics independent of particular implementations Organized into three parts encompassing 19 chapters this book begins with an overview of semantic network structure for representing knowledge as a pattern of interconnected nodes and arcs This text then analyzes the concepts of subsumption and taxonomy and synthesizes a framework that integrates many previous approaches and goes beyond them to provide an account of abstract and partially defines concepts Other chapters consider formal analyses which treat the methods of reasoning with semantic networks and their computational complexity This book discusses as well encoding linguistic knowledge The final chapter deals with a formal approach to knowledge representation that builds on ideas originating outside the artificial intelligence literature in research on foundations for programming languages This book is a valuable resource for mathematicians **Iris Biometric Model for Secured Network Access** Franjeh El Khoury,2016-04-19 In the last few years biometric techniques have proven their ability to provide secure access

to shared resources in various domains Furthermore software agents and multi agent systems MAS have shown their efficiency in resolving critical network problems Iris Biometric Model for Secured Network Access proposes a new model the IrisCryptoAgen *Program Solicitation* ,1997 **The Publishers' Trade List Annual** ,1991 **Automated Planning and Acting** Malik Ghallab,Dana Nau,Paolo Traverso,2016-08-09 This book presents the most recent and advanced techniques for creating autonomous AI systems capable of planning and acting effectively **ARPA/Rome Laboratory Knowledge-based Planning and Scheduling Initiative Workshop Proceedings, Tuscon, Arizona, February 21-24, 1994** ,1994 **Principles of Knowledge Representation and Reasoning** Luigia Carlucci Aiello,Jon Doyle,Stuart Charles Shapiro,1996 **Artificial Intelligence** Margaret A. Boden,1996-06-20 Artificial Intelligence is the study of how to build or program computers to enable them to do what minds can do This volume discusses the ways in which computational ideas and computer modeling can aid our understanding of human and animal minds Major theoretical approaches are outlined as well as some promising recent developments Fundamental philosophical questions are discussed along with topics such as the differences between symbolic and connectionist AI planning and problem solving knowledge representation learning expert systems vision natural language creativity and human computer interaction This volume is suitable for any psychologist philosopher or computer scientist wanting to know the current state of the art in this area of cognitive science Up to date account of how computational ideas and techniques are relevant to psychology Includes discussions of classical symbolic AI of connectionism neural nets of evolutionary programming and of A Life Discusses a wide range of psychology from low level vision to creativity **Innovative Approaches to Planning, Scheduling and Control** Katia P. Sycara,1990 Computer Science Handbook Allen B. Tucker,2004-06-28 When you think about how far and fast computer science has progressed in recent years it s not hard to conclude that a seven year old handbook may fall a little short of the kind of reference today s computer scientists software engineers and IT professionals need With a broadened scope more emphasis on applied computing and more than 70 chap *Artificial Intelligence* David L. Poole,Alan K. Mackworth,2010-04-19 Recent decades have witnessed the emergence of artificial intelligence as a serious science and engineering discipline This textbook aimed at junior to senior undergraduate students and first year graduate students presents artificial intelligence AI using a coherent framework to study the design of intelligent computational agents By showing how basic approaches fit into a multidimensional design space readers can learn the fundamentals without losing sight of the bigger picture The book balances theory and experiment showing how to link them intimately together and develops the science of AI together with its engineering applications Although structured as a textbook the book s straightforward self contained style will also appeal to a wide audience of professionals researchers and independent learners AI is a rapidly developing field this book encapsulates the latest results without being exhaustive and encyclopedic The text is supported by an online learning environment Alspace <http://aispace.org> so that students can experiment with the main AI algorithms plus problems animations
