 reviews the importance of massive stars in several areas of astrophysics Massive stars are objects that are 10 100 times the
 mass of our Sun Above ten solar masses loss through stellar winds begins to have a major impact on the evolution of a star
 The upper limit of 100 solar masses is derived from observations Significant progress has now been achieved in massive star
 research New models along with high quality observations have improved our understanding of the formation structure
 atmosphere and evolution of these massive objects They are formed in violent bursts of star formation and are probably
 related to the phenomena observed in active galactic nuclei The workshop at the Space Telescope Science Institute examined
 the interplay between the astrophysics of massive stars and their location in extragalactic starburst regions There are
 eighteen chapters by leading researchers Each has been carefully edited to ensure that the book is a comprehensive
