*Ruminant Physiology* Pierre Cronjé, 2000 The International Symposium on Ruminant Physiology ISRP is the premier forum for presentation and discussion of advances in knowledge of the physiology of ruminant animals This book brings together edited versions of the keynote review papers presented at the symposium *Ruminant Physiology* Wolfgang v Engelhardt, 1995 **Ruminant Physiology** P. B. Cronjé, E. A. Boomker, 2000 **The Rumen Microbial Ecosystem** P.N. Hobson, C.S. Stewart, 2012-12-06 The Preface to the first edition of this book explained the reasons for the publication of a comprehensive text on the rumen and rumen microbes in 1988 The microbes of the ruminant's forestomach and those in related organs in other animals and birds provide the means by which herbivorous animals can digest and obtain nutriment from vegetation In turn humans have relied and still do rely on herbivores for much of their food clothing and motive power Herbivores also form the food of carnivorous animals and birds in the wild The importance of the rumen microorganisms is thus apparent But while a knowledge of rumen organisms is not strictly necessary for the normal practical feeding of farm animals in recent years there has been much more emphasis on increasing the productivity of domesticated animals and in rearing farm animals on unusual feedstuffs Here a knowledge of the reactions of the rumen flora and the limits to these reactions can be invaluable In addition anaerobic rumen type microorganisms are found in the intestines of omnivores including humans and can be implicated in diseases of humans and animals They are also found in soils and natural waters where they play a part in causing pollution and also in reducing it while the same organisms confined in artificial systems are essential for the purification of sewage and other polluting and toxic wastes **Farm Animal Metabolism and Nutrition** J. P. discussed separately from each other. Information on form and function of organs of digestion in eutherians are discussed under comparative anatomical aspects. The variability and diversity of anatomical structures represents the basis of functional differentiations.

**Principles of Animal Nutrition** Guoyao Wu, 2017-11-22. Animals are biological transformers of dietary matter and energy to produce high quality foods and wools for human consumption and use. Mammals, birds, fish and shrimp require nutrients to survive, grow, develop and reproduce. As an interesting, dynamic and challenging discipline in biological sciences, animal nutrition spans an immense range from chemistry, biochemistry, anatomy and physiology to reproduction, immunology, pathology and cell biology. Thus, nutrition is a foundational subject in livestock, poultry and fish production as well as the rearing and health of companion animals. This book, entitled *Principles of Animal Nutrition*, consists of 13 chapters. Recent advances in biochemistry, physiology and anatomy provide the foundation to understand how nutrients are utilized by ruminants and non ruminants. The text begins with an overview of the physiological and biochemical bases of animal nutrition, followed by a detailed description of chemical properties of carbohydrates, lipids, protein and amino acids. It advances to the coverage of the digestion, absorption, transport and metabolism of macronutrients, energy, vitamins and minerals in animals. To integrate the basic knowledge of nutrition with practical animal feeding, the book continues with discussion on nutritional requirements of animals for maintenance and production as well as the regulation of food intake by animals. Finally, the book closes with feed additives including those used to enhance animal growth and survival, improve feed efficiency for protein production and replace feed antibiotics. While the classical and modern concepts of animal nutrition are emphasized throughout the book, every effort has been made to include the most recent progress in this ever expanding field so that readers in various biological disciplines can integrate biochemistry and physiology with nutrition, health and disease in mammals, birds and other animal species, e.g. fish and shrimp. All chapters clearly provide the essential literature related to the principles of animal nutrition which should be useful for academic researchers, practitioners, beginners and government policy makers. This book is an excellent reference for professionals and a comprehensive textbook for senior undergraduate and graduate students in animal science, biochemistry, biomedicine, biology, food science, nutrition, veterinary medicine and related fields.

**Grassland: a global resource** D.A. McGilloway, 2023-08-28. The concept of grasslands as a global resource is not new. Indeed, many recognised authorities have been canvassing for a global approach to understanding, managing and exploiting this resource for many years. This is the first book that gathers together leading experts from around the world to outline our current understanding of this complex ecosystem, the ways in which it can be enhanced and utilised and where the research challenges are for the future. The following themes unite the book: Efficient production from grassland; Grassland and the environment; Delivering the benefits from grassland. The reader is given an in depth understanding of the biology of the system and how grasslands are crucial for soil stabilisation and water quality. Secondly, much attention is given to how grasslands offer the possibility of increasing food supply and income generation which is a hugely important but often

ignored facet in today's climate of extensification and biodiversity. Current advances in the grassland sciences have a proven potential to promote the economic development and environmental stability of regions, nations and peoples, particularly in some of the most resource-limited areas of the world. Approaches for achieving the most effective development and adoption of new technology are reviewed.

Feeding in Domestic Vertebrates V. L. Bels, 2006. Domestication of vertebrates is based on the understanding of the needs of animals in their natural environment. Thus the success of this domestication throughout human history is largely dependant of the knowledge of the animal feeding behaviour. The aim of this volume is to provide advanced students and researchers with a review of current knowledge of feeding in domestic mammals and birds. The book also presents chapters on feeding behaviour in particular species; the scope is wide, covering not only ruminants, poultry and pigs but also more specifically horses, rabbits and ostrich. Contributors include leading research workers from Europe, USA, Australia and South Africa.

**Diversity and Benefits of Microorganisms from the Tropics** João Lucio de Azevedo, Maria Carolina Quecine, 2017-06-10. This book addresses the diversity of tropical microorganisms and its applications in agriculture, renewable energy production and environmental protection. It covers several tropical habitats such as rain forests, mangroves, sea and river waters and describes how microorganisms isolated from these regions can be used to control insects and plant diseases, to improve sugar cane and biofuels production among other applications. The book also aims to bring researchers attention to the potential of tropical microorganisms for biotechnological purposes, an area that is still far from being well explored.
