Run To Run Control In Semiconductor Manufacturing:

Run-to-Run Control in Semiconductor Manufacturing James Moyne, Enrique del Castillo, Arnon M. Hurwitz, 2018-10-08 Run to run R2R control is cutting edge technology that allows modification of a product recipe between machine runs thereby minimizing process drift shift and variability and with them costs Its effectiveness has been demonstrated in a variety of processes such as vapor phase epitaxy lithography and chemical mechanical planarization The only barrier to the semiconductor industry s widespread adoption of this highly effective process control is a lack of understanding of the technology Run to Run Control in Semiconductor Manufacturing overcomes that barrier by offering in depth analyses of R2R control
