Christian Streffer, H. Bolt, D. Follesdal, P. Hall, J.G. Hengstler, P. Jacob, D Oughton, K. Prieß, E. Rehbinder, E. Swaton, 2004-05-03 The ever increasing release of harmful agents due to human activities have led in some areas of the world to heavy pollution In order to protect human health and the environment environmental standards that shall limit the release and the concentration of those toxic agents in the environment and hence the exposure to it have to be established The related assessment and decision making procedures have to be based on solid scientific data about the effects and mechanisms of these agents as well as on ethical social and economic aspects For risk evaluation the knowledge of the dose response curve is an essential prerequisite Dose responses without a threshold dose are most critical in this connection Such dose responses are assumed for mutagenic and carcinogenic effects which therefore dominate also the discussion in this book In the environmentally important low dose range risk estimation can only be achieved by extrapolation from higher doses with measurable effects The extrapolation is accompanied with uncertainties which makes risk evaluation as well as risk communication frequently problematic In order to ensure rational efficient and fair decisions beyond a sound scientific assessment the dialogue between disciplines with the affected people and with the general public is necessary In this book

the whole range of relevant and essential aspects of risk evaluation and standard setting is addressed Starting with the ethical foundations the sound analysis of recent scientific findings sets the frame for further reflections by theory of cognition psychosocial sciences and jurisprudence The authors end up with concluding recommendations for coping with the recent problems of standard setting in the field of environmentally relevant low doses The book is designed to a readership of scientists legislators administrators and the interested public Environmental Exposures and Human Health Challenges Papadopoulou, Paraskevi, Marouli, Christina, Misseyanni, Anastasia, 2019-03-15 Environmental health is an area with significant developments and noteworthy challenges that expand into various disciplines medicine and public health sociology and communications technology policymaking and legislation Due to the massive amount of health related issues additional literature involving environmental health is required to improve the wellbeing of citizens worldwide Environmental Exposures and Human Health Challenges provides interdisciplinary insights into concepts and theories related to environmental exposures and human health impacts via the air water soil heavy metal exposure and other chemical toxins The book also addresses inequalities and environmental injustices in relation to environmental exposures and health impacts Covering topics such as health policies pollution effects and heavy metal exposure this publication is designed for public health professionals preventive medicine specialists clinicians data scientists environmentalists academicians practitioners researchers and students Environmental Health and the U.S. Federal System Michael R Greenberg, Dona Schneider, 2019-08-13 This book explains how the U S federal system manages environmental health issues with a unique focus on risk management and human health outcomes Building on a generic approach for understanding human health risk this book shows how federalism has evolved in response to environmental health problems political and ideological variations in Washington D C as well as in state and local governments It examines laws rules and regulations showing how they stretch or fail to adapt to environmental health challenges Emphasis is placed on human health and safety risk and how decisions have been influenced by environmental health information The authors review different forms of federalism and analyse how it has had to adapt to ever evolving environmental health hazards such as global climate change nanomaterials nuclear waste fresh air and water as well as examining the impact of robotics and artificial intelligence on worker environmental health They demonstrate the process for assessing hazard information and the process for federalism risk management and subsequently arguing that human health and safety should receive greater attention This book will be essential reading for students and scholars working on environmental health and environmental policy particularly from a public health and risk management viewpoint in addition to practitioners and policymakers involved in environmental management and public policy **Environmental Health Perspectives** ,2004 Estrogens in the Environment, III ,1993 **Issues for Debate in Environmental Management** CQ Researcher, 2010 Issues for Debate in Environmental Management is a contemporary collection of articles covering core issues within the broad topic of environmental management The book is intended to

Environmental Radiobiology Paul N. Schofield, Carmel E. Mothersill, 2023-10-17 This book focuses on the impacts of anthropogenic radiation on wildlife and ecosystems and provides an in depth look at the approaches and available tools we can use to gain information about biological effects of radiation in the environment The nuclear accidents in Chornobyl in 1986 and Fukushima in 2011 focussed the attention of the world on the vulnerability of ecosystems to radiation In Chornobyl there still remains an exclusion zone where levels are considered to be too high for people and impacts on terrestrial and aquatic ecosystems can still be measured 35 years later In the area impacted by the Fukushima disaster intense remediation is still under way at tremendous cost and causing widespread disruption to the environment That accident impacted the terrestrial and marine ecosystems In both accidents it became obvious that a radiation protection framework focussing on protection of humans a single species and using evacuation as a key strategy was not sufficient to protect the natural environment The complexity of ecosystems makes developing a protection framework very challenging but in order to even start the process it is vital to gather information about likely impacts of low dose exposures on wildlife and to develop monitoring tools to measure changes over time This book contains reviews and original research aimed at filling our knowledge gaps about these important areas Environmental Radiobiology will be a key resource for academics researchers and advanced students of Radiobiology Radioecology Biology Ecology Biomedicine and Research Methods The chapters included in this book were originally published as a special issue of International Journal of Radiation Biology

The Overestimation of Medical Consequences of Low-Dose Exposure to Ionizing Radiation, 2nd Edition Sergei V. Jargin, 2023-10-16 This book analyzes bias

and conflicts of interest in numerous papers exaggerating the medical and biological consequences of low dose radiation After the Chernobyl accident many publications overestimated its medical consequences Among the motives for doing so were financing international help publication pressure and the pressure to write numerous theses and articles throughout one s scientific career The accident has been exploited to strangle nuclear energy thus boosting fossil fuel prices Nuclear facilities are potential targets in armed conflicts One of the motives to unleash the war in Ukraine and threats to use nuclear weapons seems to be boosting fossil fuel prices In more developed countries antinuclear resentments have been supported by Green activists well in agreement with the interests of fossil fuel vendors several companies and certain governments Today there are no alternatives to nuclear energy This book argues that in the long run non renewable fossil fuels will become more expensive contributing to excessive population growth in oil producing regions and poverty elsewhere
