

Low-Level Lead Exposure and Infant Development in the First Year¹

DAVID BELLINGER,² ALAN LEVITON, HERBERT L. NEEDLEMAN, CHRISTINE WATERNAUX AND MICHAEL RABINOWITZ

Children's Hospital and Harvard Medical School, Boston, MA 02115

Received 7 May 1985

BELLINGER, D., A. LEVITON, H. L. NEEDLEMAN, C. WATERNAUX AND M. RABINOWITZ. Low level lead exposure and infant development in the first year. *NEUROBEHAVIORAL TOXICOL TERATOL*, 8(2): 151-161, 1986. The developmental impact of prenatal and early postnatal low-level lead exposure was assessed in a prospective study of 249 middle and upper-middle class infants with umbilical cord blood lead levels in the range currently considered "normal." Infants were classified into three exposure groups: "low" ($<3 \mu\text{g/dl}$), "mid" (6 to 7 $\mu\text{g/dl}$), and "high" ($>10 \mu\text{g/dl}$). At 6 and 12 months, the lead concentration of capillary blood was measured, and the Bayley Scales of Infant Development administered. At both ages, Mental Development Index scores, adjusted for confounding, were inversely related to infants' umbilical cord blood lead levels. The difference between the mean adjusted scores of the infants in the low and high cord blood lead groups was 5.8 points at 6 months and 7.3 points at 12 months. At neither age were scores significantly related to postnatal blood lead levels. Prenatal exposure to lead levels relatively common among urban populations appear to be associated with less favorable development through the first year of life.

Human studies

Prenatal and postnatal lead studies

Infant development

WE previously reported an inverse relationship between infants' umbilical cord blood lead concentrations and their scores at 6 months of age on the Mental Development Index (MDI) of the Bayley Scales of Infant Development [2,3]. This relationship was dose-dependent over 0 to 25 $\mu\text{g/dl}$, the range of lead levels observed in our sample. The difference between the adjusted MDI scores of the infants in the "low" ($<3 \mu\text{g/dl}$) and "high" ($\geq 10 \mu\text{g/dl}$) exposure groups was approximately 6 points (0.4 SD).

Although this finding suggests that lead has adverse effects at blood concentrations prevalent among young children [12], its implications for regulatory policy depend on the magnitude of the association and its stability over time. Among the relevant questions are the following. Do the performance differences between exposure groups persist beyond 6 months of age? Does the lower mean performance of infants with "high" cord blood lead levels reflect the enhanced susceptibility of a subgroup of these infants or does the effect extend to most of them? Does level of postnatal exposure alter the relationship between cord blood lead concentration and MDI? In this report we address these and related issues by including follow-up assessments of the infants at age 12 months in a re-examination of the association between pre- and postnatal lead exposure and performance on the Bayley Scales in the first year of life.

Sample Selection

The infants enrolled in this study were selected from a

Population of 11,837 infants whose umbilical cord blood lead concentration was measured. These infants represent approximately 97% of the births at the Brigham and Women's Hospital in Boston, MA, between April 1979 and April 1981. The mean cord blood lead level of this population was 6.6 $\mu\text{g/dl}$ (SD=3.2, range=0-37) (16).

Our goal was to select three groups of infants for study: those with cord blood lead levels in the lowest tenth percentile for the population of births at this hospital (the "low" lead group), those with levels very close to the mean (the "mid" lead group), and those with levels exceeding the ninetieth percentile (the "high" lead group). The distribution of cord blood lead levels for the approximately 2,500 infants born in the first 4.5 months of blood sample collections was used to establish criteria for eligibility in these three groups (<3.6 to 7, and $\geq 10 \mu\text{g/dl}$ for the low, mid, and high lead groups, respectively). The study sample was chosen from the 9,489 infants born between August 10, 1979 and April 30, 1981.

Not all eligible infants and families were invited to participate. Infants were excluded because of a serious medical condition evident at birth or in the early postnatal period (e.g. Down's syndrome, gestational age less than 34 weeks, cleft palate), location of residence (greater than 12 miles from the Children's Hospital or in an area judged unsafe for home visitors), language barrier, failure to seek or obtain consent, an intention to relocate out of the immediate region, or our inability to locate them (Table I). Additional details about the sample selection process and ascertainment bias are presented elsewhere [3].

Low Level Lead Exposure The Clinical Implications Of Current Research:

Low Level Lead Exposure Herbert L. Needleman, 1980

Human Lead Exposure Herbert L. Needleman, 1991-12-07

Human Lead Exposure consists of scientific reviews and important contributions intended to increase the understanding of the legal social and economic forces that have delayed effective prevention of lead toxicity Chapters discuss the history both ancient and recent of lead explore its neurobiology and toxicology review the sources and routes to humans and examine evidence that indicates that lead may affect humans at levels previously thought to be harmless Neurobiologists epidemiologists public health officials and others concerned about the effects of lead on the human population will find a tremendous amount of useful information in this timely volume

Lead Exposure and Child Development M. Smith, L.

Grant, A.I. Sors, 2012-12-06 This book arises out of a workshop on lead exposure and child development which was held at the University of Edinburgh on 8th 12th September 1986 It was organized jointly by the Commission of the European Communities CEC and the US Environmental Protection Agency EPA in association with the UK Department of the Environment and the Scottish Home and Health Department It brought together most of the internationally recognized groups working on the effects of lead exposure on child development including child psychologists psychiatrists neurologists epidemiologists toxicologists statisticians and medical practitioners One of the unique features of the meeting was that it included workers from initially separate fields of lead research in particular those undertaking studies in infants and in older children and those carrying out behavioural research in animals as well as those undertaking biochemical studies on mechanisms of lead effect The structure of this book reflects the main elements of the meeting As such it includes three main sections The first consists of two major state of the art reviews and two invited introductory papers The reviews were prepared for the organizers of the conference by two of the Editors The objectives were to assess critically the state of current knowledge in this field and to provide a scientific basis both for policy decisions and for further research The review prepared by Marjorie Smith for the Commission of the European Communities focusses on methodological and design issues and summarizes our present scientific knowledge in this area

The Vulnerable Brain and Environmental Risks R.L.

Isaacson, K.F. Jensen, 2013-03-07 Contributors to this second volume discuss metal and toxicant toxicity their environmental sources and methods of action and their regulation by courts and agencies

Illness and the Environment J. Stephen

Kroll-Smith, Philip M. Brown, Valerie Gunter, 2000-08 In 25 papers academics and a few environmental scientists activists discuss profound social policy and competing paradigm issues concerning the contested environment disease link in a postnatural world Include discussion questions Kroll Smith is a professor of sociology at the U of New Orleans Annotation copyrighted by Book News Inc Portland OR

Advances in Behavioral Pharmacology N. Krasnegor, D. B. Gray, T.

Thompson, 2014-06-03 First published in 1986 This monograph is based on a conference sponsored by the Human Learning and Behavior Branch of the National Institute of Child Health and Human Development NIH The meeting that was held at the

Xerox Center in Leesburg Virginia in August 1983 brought together a group of leading researchers for the purpose of providing an overview of the emerging field of developmental behavioral pharmacology More specifically as is evidenced by the chapters in this volume the intent was to put the field into historical perspective render a working definition and outline strategies and tactics for conducting behavioral pharmacological research in the developing organism *The Developmental Neurotoxicity of Lead* C. Winder, 2012-12-06 Over the past two millennia environmental lead levels have risen dramatically Patterson 1980 Most of this increase has occurred since the beginning of the present century Murozami et al 1969 and taken into perspective a typical individual living in the industrialized world sustains a lead burden 500 times that of his prehistoric ancestors Patterson 1983 Lead is unique in being an environmental pollutant where the levels deemed clinically toxic are less than an order of magnitude from those that are normally encountered in the population The clinical limit for lead exposure 70 µg Pb / 100 ml blood is about three times the normal value in the range 15-30 µg Pb / 100ml blood This small difference is remarkable from the toxicological standpoint The key concept here is control of dispersal The industrial actions of man bring contact with a wide variety of substances some of which are poisonous or dangerous In such cases protective measures are taken to keep hazardous exposure to a minimum In the case of lead compounds stringent regulations are production and distribution enforced The exception to this is in the dispersal of lead from vehicle exhausts following purchase from the petrol pump Perhaps man's long standing acquaintance with lead in home and industry is responsible for a complacency which until only recently has been unquestioned Beginning in the late 1960s evidence began to accumulate suggesting that lead at relatively low levels of exposure might be causing negative effects on neurobiological function **Scientific Studies in Mental Retardation** John Dobbing, A. D. B. Clarke, 1984-06-18 **Cost Increases on Four Watershed Projects of the Soil Conservation Service** United States. Congress. Senate. Committee on Environment and Public Works. Subcommittee on Water Resources, 1984 **Morbidity and Mortality Weekly Report**, 1990-07 *MMWR*, 1990 *Changing Metal Cycles and Human Health* J.O. Nriagu, 2012-12-06 of metal interactions with subcellular biochemical systems usually either are metabolites of the system affected porphyrinurias or represent some specific function of a cellular system being impaired proteinurias One typically finds a continuum of symptoms from the subtle or so called no effect biochemical and physiological indicators of exposure to severe clinical disease and death This continuum is the basis of much of the controversy since many health officials follow the traditional practice of applying the threshold health effect concept in evaluating the problems of environmental exposure to metals The past decade or so however has seen a vast increase in our understanding of the effects of elevated concentrations of toxic metals in local populations and ecosystems At the same time there is a growing awareness that the effects of the metals which occur naturally in the environment must be distinguished from those imposed by the pollutant fraction This point was amply documented in a recent study of cadmium intake and cadmium in a number of human tissues in Sweden Japan and the

United States which showed fairly conclusively that the background exposure in Japan was about threefold higher than in the other two countries. One immediate implication is that any health effect studies of cadmium in Japan using control groups within that country are liable to underestimate the difference between the exposed and the control groups simply because of the high background intake. *Lead Contamination* United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Health and the Environment, 1988. **Neurotoxicology** Kenneth Blum, L.

Manzo, 1985-07-30. **Lead Pollution From Motor Vehicles 1974-1986** P. Farmer, 2003-09-02 This bibliography brings together a wide range of material on the problem of environmental lead pollution from motor vehicles published during 1974-1986. It includes research and surveys from a number of countries and covers the effects of exhaust gas lead on humans including children. Neurotoxicity : identifying and controlling poisons of the nervous system : new developments in neuroscience. , **The Nature and Extent of Lead Poisoning in Children in the United States** , 1988

Environmental Health Perspectives , 1993. **Hazardous Waste Contamination of Water Resources** United States. Congress. House. Committee on Public Works and Transportation. Subcommittee on Investigations and Oversight, 1984

Reproductive and Developmental Toxicity of Metals Tom Clarkson, 2012-12-06 The Permanent Commission and International Association on Occupational Health (PCIAOH) established in 1969 a Subcommittee on the Toxicology of Metals under the chairmanship of Lars Friberg. This committee, which later was named the Scientific Committee on the Toxicology of Metals, has organized a number of previous meetings that have led to publications in three major areas of metal toxicology: a preliminary meeting in Slanchev Bryag, Bulgaria, in 1971; followed by a meeting in 1972 in Buenos Aires, Argentina, which produced two reports: Dukes and Friberg, 1971. Task Group on Metal Accumulation, 1973, that discussed the metabolism of metals with special reference to absorption, excretion, and biological half-times. The effects and dose-response relationships of toxic metals, including a discussion of general principles, was the second major topic addressed by the Scientific Committee at a meeting in Tokyo in 1974. Nordberg, 1976. The philosophy of this conference, as well as the previous one in Buenos Aires, was based on the concept of a threshold dose for the occurrence of adverse effects. In a conference held in Atlanta, USA, in 1980, the scope of discussion on metal effects was broadened to include the role of metals in carcinogenesis. Thus, for the first time, the Scientific Committee took under consideration the possibility of non-threshold relationships. Belman and Nordberg, 1981. In addition, the Scientific Committee on the Toxicology of Metals organized a workshop on metal interactions in Stockholm, 1977. Nordberg et al.

Low Level Lead Exposure The Clinical Implications Of Current Research: Bestsellers in 2023 The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous captivating novels captivating the hearts of readers worldwide. Lets delve into the realm of bestselling books, exploring the engaging narratives that have charmed audiences this year. The Must-Read : Colleen Hoover's "It Ends with Us" This touching tale of love, loss, and resilience has gripped readers with its raw and emotional exploration of domestic abuse. Hoover skillfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph. Uncover the Best : Taylor Jenkins Reid's "The Seven Husbands of Evelyn Hugo" This spellbinding historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reid's captivating storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Discover the Magic : Delia Owens' "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens weaves a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These top-selling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of engaging stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and gripping novel that will keep you guessing until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.

Low Level Lead Exposure The Clinical Implications Of Current Research Introduction

In the digital age, access to information has become easier than ever before. The ability to download Low Level Lead Exposure The Clinical Implications Of Current Research has revolutionized the way we consume written content. Whether you are a student looking for course material, an avid reader searching for your next favorite book, or a professional seeking research papers, the option to download Low Level Lead Exposure The Clinical Implications Of Current Research has opened up a world of possibilities. Downloading Low Level Lead Exposure The Clinical Implications Of Current Research provides numerous advantages over physical copies of books and documents. Firstly, it is incredibly convenient. Gone are the days of

carrying around heavy textbooks or bulky folders filled with papers. With the click of a button, you can gain immediate access to valuable resources on any device. This convenience allows for efficient studying, researching, and reading on the go. Moreover, the cost-effective nature of downloading Low Level Lead Exposure The Clinical Implications Of Current Research has democratized knowledge. Traditional books and academic journals can be expensive, making it difficult for individuals with limited financial resources to access information. By offering free PDF downloads, publishers and authors are enabling a wider audience to benefit from their work. This inclusivity promotes equal opportunities for learning and personal growth. There are numerous websites and platforms where individuals can download Low Level Lead Exposure The Clinical Implications Of Current Research. These websites range from academic databases offering research papers and journals to online libraries with an expansive collection of books from various genres. Many authors and publishers also upload their work to specific websites, granting readers access to their content without any charge. These platforms not only provide access to existing literature but also serve as an excellent platform for undiscovered authors to share their work with the world. However, it is essential to be cautious while downloading Low Level Lead Exposure The Clinical Implications Of Current Research. Some websites may offer pirated or illegally obtained copies of copyrighted material. Engaging in such activities not only violates copyright laws but also undermines the efforts of authors, publishers, and researchers. To ensure ethical downloading, it is advisable to utilize reputable websites that prioritize the legal distribution of content. When downloading Low Level Lead Exposure The Clinical Implications Of Current Research, users should also consider the potential security risks associated with online platforms. Malicious actors may exploit vulnerabilities in unprotected websites to distribute malware or steal personal information. To protect themselves, individuals should ensure their devices have reliable antivirus software installed and validate the legitimacy of the websites they are downloading from. In conclusion, the ability to download Low Level Lead Exposure The Clinical Implications Of Current Research has transformed the way we access information. With the convenience, cost-effectiveness, and accessibility it offers, free PDF downloads have become a popular choice for students, researchers, and book lovers worldwide. However, it is crucial to engage in ethical downloading practices and prioritize personal security when utilizing online platforms. By doing so, individuals can make the most of the vast array of free PDF resources available and embark on a journey of continuous learning and intellectual growth.

FAQs About Low Level Lead Exposure The Clinical Implications Of Current Research Books

How do I know which eBook platform is the best for me? Finding the best eBook platform depends on your reading preferences and device compatibility. Research different platforms, read user reviews, and explore their features before making a choice. Are free eBooks of good quality? Yes, many reputable platforms offer high-quality free eBooks, including

classics and public domain works. However, make sure to verify the source to ensure the eBook credibility. Can I read eBooks without an eReader? Absolutely! Most eBook platforms offer web-based readers or mobile apps that allow you to read eBooks on your computer, tablet, or smartphone. How do I avoid digital eye strain while reading eBooks? To prevent digital eye strain, take regular breaks, adjust the font size and background color, and ensure proper lighting while reading eBooks. What the advantage of interactive eBooks? Interactive eBooks incorporate multimedia elements, quizzes, and activities, enhancing the reader engagement and providing a more immersive learning experience. Low Level Lead Exposure The Clinical Implications Of Current Research is one of the best book in our library for free trial. We provide copy of Low Level Lead Exposure The Clinical Implications Of Current Research in digital format, so the resources that you find are reliable. There are also many Ebooks of related with Low Level Lead Exposure The Clinical Implications Of Current Research. Where to download Low Level Lead Exposure The Clinical Implications Of Current Research online for free? Are you looking for Low Level Lead Exposure The Clinical Implications Of Current Research PDF? This is definitely going to save you time and cash in something you should think about.
