Lp On The Edge:

Algorithms on Strings, Trees, and Sequences Dan Gusfield, 1997-05-28 String algorithms are a traditional area of study in computer science. In recent years their importance has grown dramatically with the huge increase of electronically stored text and of molecular sequence data. DNA or protein sequences produced by various genome projects. This book is a general text on computer algorithms for string processing. In addition to pure computer science the book contains extensive discussions on biological problems that are cast as string problems and on methods developed to solve them. It emphasises the fundamental ideas and techniques central to today's applications. New approaches to this complex material simplify methods that up to now have been for the specialist alone. With over 400 exercises to reinforce the material and develop additional topics the book is suitable as a text for graduate or advanced undergraduate students in computer science, computational biology or bioinformatics. Its discussion of current algorithms and techniques also makes it a reference for professionals.

ECAI 2023 K. Gal, A. Nowé, G.J. Nalepa, 2023-10-18 Artificial intelligence or AI now affects the day to day life of almost everyone on the planet and continues to be a perennial hot topic in the news. This book presents the proceedings of ECAI 2023 the 26th European Conference on Artificial Intelligence and of PAIS 2023 the 12th Conference on Prestigious Applications of Intelligent Systems held from 30 September to 4 October 2023 and on 3 October 2023 respectively in Kraków, Poland. Since 1974 ECAI has been the premier venue for presenting AI research in Europe and this annual conference has become the place for researchers and practitioners of AI to discuss the latest trends and challenges in all subfields of AI and to demonstrate innovative applications and uses of advanced AI technology. ECAI 2023 received 1896 submissions, a record number of which 1691 were retained for review, ultimately resulting in an acceptance rate of 23%. The 390 papers included here cover topics including machine learning, natural language processing, multi-agent systems and vision and knowledge representation and reasoning. PAIS 2023 received 17 submissions of which 10 were accepted after a rigorous review process. Those 10 papers cover topics ranging from fostering better working environments, behavior modeling and citizen science to large language models and neuro-symbolic applications and are also included here. Presenting a comprehensive overview of current research and developments in AI, the book will be of interest to all those working in the field.

due to the naturalness in specification and the direct relation to efficient implementation Language in the present context may refer to written and spoken language formal and semiformal language and even general input data to multimodal and pervasive systems which can be handled in very much the same ways using constraint programming The notion of constraints with slightly differing meanings apply in the characterization of linguistic and cognitive phenomena in formalized linguistic models as well as in implementation oriented frameworks Programming techniques for constraint solving have been and still are in a period with rapid development of new efficient methods and paradigms from which language processing can profit A common metaphor for human language processing is one big constraint solving process in which the different specified linguistic and cognitive phases take place in parallel and with mutual cooperation which fits quite well with current constraint programming paradigms

The Traveling Salesman Problem David L. Applegate, Robert E. Bixby, Vašek Chvátal, William J. Cook, 2011-09-19 This book presents the latest findings on one of the most intensely investigated subjects in computational mathematics the traveling salesman problem It sounds simple enough given a set of cities and the cost of travel between each pair of them the problem challenges you to find the cheapest route by which to visit all the cities and return home to where you began Though seemingly modest this exercise has inspired studies by mathematicians chemists and physicists Teachers use it in the classroom It has practical applications in genetics telecommunications and neuroscience The authors of this book are the same pioneers who for nearly two decades have led the investigation into the traveling salesman problem They have derived solutions to almost eighty six thousand cities yet a general solution to the problem has yet to be discovered Here they describe the method and computer code they used to solve a broad range of large scale problems and along the way they demonstrate the interplay of applied mathematics with increasingly powerful computing platforms They also give the fascinating history of the problem how it developed and why it continues to intrigue us

Understanding and Using Linear Programming Jiri Matousek, Bernd Gärtner, 2007-07-04 This is an introductory textbook of linear programming written mainly for students of computer science and mathematics Our guiding phrase is what every theoretical computer scientist should know about linear programming The book is relatively concise in order to allow the reader to focus on the basic ideas For a number of topics commonly appearing in thicker books on the subject we were seriously tempted to add them to the main text but we decided to present them only very briefly in a separate glossary At the same time we aim at covering the main results with complete proofs and in sufficient detail in a way ready for presentation in class One of the main focuses is applications of linear programming both in practice and in theory Linear programming has become an extremely useful tool in theoretical computer science and in mathematics While many of the newest modern applications are much too complicated to be included in an introductory text we hope to communicate some of the flavor and excitement of such applications on simpler examples
