s most valuable physical assets and infrastructure sectors as networks of nodes and links It then analyzes the network to identify vulnerabilities and risks in the sector combining network science complexity theory modeling and simulation and risk analysis The most critical components become the focus of deeper analysis and protection This approach reduces the complex problem of protecting water supplies energy pipelines telecommunication stations Internet and Web networks and power grids to a much simpler problem of protecting a few critical nodes The new edition incorporates a broader selection of ideas and sectors and moves the mathematical topics into several appendices
