Mellor, 2004 A readable and much needed introduction to MDA Dr Jim Arlow coauthor of UML and the Unified Process Addison Wesley 2002 and Enterprise Patterns and MDA Addison Wesley 2004 This book provides an excellent introduction to the ideas and technologies that will form the foundation of the model driven architecture over the coming years I recommend it wholeheartedly Dr Andy Evans Managing Director Xactium Limited UK Excellent job of distilling MDA down to its core concepts Krzysztof Czarnecki University of Waterloo coauthor of Generative Programming Addison Wesley 2000 As systems have grown more crucial to the operations of organizations worldwide so too have the costs associated with building and maintaining them Enter model driven architecture MDA a standard framework from the Object Management Group OMG that allows developers to link object models together to build complete systems MDA prevents design decisions from being intertwined with the application and keeps it independent of its implementation The result is an application that can be combined with other technologies as well as other applications and models that become highly reusable assets MDA Distilled is an accessible introduction to the MDA standard and its tools and technologies The book describes the fundamental features of MDA how they fit together and how you can use them in your organization today You will also learn how to define a model driven process for a project involving multiple platforms implement that process and then test the resulting system MDA Distilled will help you understand The MDA framework including the platform independent model PIM and the platform specific model PSM The Meta Object Facility MOF the OMG s adopted standard for metamodeling Horizontal vertical and merging mappings between models Building marks and marking models Elaborating models including viewing generated models and managing manual changes Building executable models with Executable UML Agile MDA development Developers and architects can dramatically improve productivity portability interoperability and maintenance with MDA Find out how with this essential reference and quickly learn how to harness the significant power of this new framework Mda Distilled Stephen J. Mellor, 2004 **Essential Software Architecture** Ian Gorton, 2011-04-27 Job titles like Technical Architect and Chief Architect nowadays abound in software industry yet many people suspect that architecture is one of the most overused and least understood terms in professional software development Gorton s book tries to resolve this dilemma It concisely describes the essential elements of knowledge and key skills required to be a software architect The explanations encompass the essentials of architecture thinking practices and supporting technologies They range from a general understanding of structure and quality attributes through technical issues like middleware components and service oriented architectures to recent technologies like model driven architecture software product lines aspect oriented design and the Semantic Web which will presumably influence future software systems This second edition contains new material covering enterprise architecture agile development enterprise service bus technologies RESTful Web services and a case study on how to use the MeDICi integration framework All approaches are illustrated by an ongoing real

Methodologies, Tools and Techniques Hamido Fujita,Roberto Revetria,2012 Software is the essential enabling means for science and the new economy It helps us to create a more reliable flexible and robust society But software often falls short of our expectations Current methodologies tools and techniques remain expensive and are not yet sufficiently reliable while many promising approaches have proved to be no more than case by case oriented methods This book contains extensively reviewed papers from the eleventh International Conference on New Trends in software Methodology Tools and Techniques SoMeT_12 held in Genoa Italy in September 2012 The conference provides an opportunity for scholars from the international research community to discuss and share research experiences of new software methodologies and techniques and the contributions presented here address issues ranging from research practices and techniques and methodologies to proposing and reporting solutions for global world business The emphasis has been on human centric software methodologies end user development techniques and emotional reasoning for an optimally harmonized performance between the design tool and the

user Topics covered include the handling of cognitive issues in software development to adapt it to the user's mental state and intelligent software design in software utilizing new aspects on conceptual ontology and semantics reflected on knowledge base system models This book provides an opportunity for the software science community to show where we are today and where the future may take us Evaluation of Novel Approaches to Software Engineering Leszek A.

From Stakeholders' Needs to Formal Designs Barbara Paech,Craig Martell,2008-11-27

We are pleased to present the proceedings of the 14th Monterey Workshop which took place September 10-13, 2007 in Monterey, CA, USA. In this preface we give the reader an overview of what took place at the workshop and introduce the contributions in this Lecture Notes in Computer Science volume. A complete introduction to the theme of the workshop as well as to the history of the Monterey Workshop series can be found in Luqi and Kordon's *Advances in Requirements Engineering: Bridging the Gap between Stakeholders' Needs and Formal Designs* in this volume. This paper also contains the case study that many participants used as a problem to frame their analyses and a summary of the workshop's results. The workshop consisted of three keynote talks, three panels, presentations of peer-reviewed papers as well as presentations of various position papers by the participants. The keynote speakers at this year's workshop were Daniel Berry, Aravind Joshi, and Lori Clarke. Each of their talks was used to set the tone for the presentations and discussions for that particular day. Daniel Berry presented an overview of the needs and challenges of natural language processing in requirements engineering with a special focus on ambiguity in his talk *Ambiguity in Natural Language Requirements*. Aravind Joshi provided an overview of current natural language processing research in discourse analysis in the talk *Some Recent Developments in Natural Language Processing*. Finally, Lori Clarke showed how to combine formal requirements specification with natural language processing to cope with the complex domain of medical information processes in *Getting the Details Right*.

Software Engineering of Fault Tolerant Systems P. Pelliccione, 2007 In architecting dependable systems what is required to improve the overall system robustness is fault tolerance Many methods have been proposed to this end the solutions are usually considered late during the design and implementation phases of the software life cycle e g Java and Windows NT exception handling thus reducing the effectiveness error and fault handling Since the system design typically models only normal behaviour of the system while ignoring exceptional ones the implementation of the system is unable to handle abnormal events Consequently the system may fail in unexpected ways due to faults It has been argued that fault tolerance management during the entire life cycle improves the overall system robustness and that different classes of threats need to be identified for and dealt with at each distinct phase of software development depending on the abstraction level of the software system being modelled This book builds on this trend and investigates how fault tolerance mechanisms can be applied when engineering a software system In particular it identifies the new problems arising in this area introduces the new models to be applied at different abstraction levels defines methodologies for model driven engineering of such systems and outlines the new technologies and validation and verification environments supporting this
