Secret Projects of the Luftwaffe - Vol 1 - Jet Fighters 1939 -1945 Dan Sharp,2020-09-22 Germany's air ministry was quick to grasp the potential of the jet engine as early as 1938 and by 1939 several German aircraft manufacturers were already working on fighter designs that would utilize this new form of propulsion Rocket engines too were seen as the way of the future and companies were commissioned to design fighters around them As the Second World War began the urgent need to bring these advanced new types into production saw a host of innovative aircraft designs being produced which would eventually result in Messerschmitt's Me 262 jet fighter and the Me 163 rocket propelled interceptor And as the war progressed efforts were increasingly made to find better ways of utilizing jet rocket and latterly ramjet engines in fighter aircraft Aviation companies from across Germany set their finest minds to the task and produced some of the most radical aircraft designs the world had ever seen They proposed rotating wing ramjet fighters arrowhead shaped rammers rocket firing bat winged gun platforms sleek speed machines tailless flying wings tiny mini fighters and a host of others ranging from deadly looking advanced fighters to downright dangerous vertical launch interceptors **Secret Projects of the Luftwaffe Volume 1 Jet Fighters 1939 1945** by Dan Sharp based on original research using German wartime documents offers the most complete and authoritative account yet of these fascinating designs through previously unseen photographs illustrations and period documentation from archives around the world

Modelling Luftwaffe Jets and Wonder Weapons Brett Green,2012-11-20 While the Allies largely relied on mass production to help them win World War II Germany put a great deal of their limited resources into new technologies and wonder weapons In addition to these tangible assets which were used with varying degrees of success the drawing boards of Germany were littered with dozens of advanced designs that never reached the prototype or production stages Many of these operational and paper projects advanced the pace and influenced the direction of aircraft development in the decades following World War II with many of the German engineers responsible for these innovations seamlessly continuing their roles in the United States and the USSR Modellers have had a long fascination for the Luftwaffe's jet arsenal and secret weapons of fact and fiction and this new Osprey Masterclass will explore the Luftwaffe jets and rocket planes that saw service at the end of World War II [Passages Volume 1: The Marus Manuscripts](#)

Pavelec,2007-02-28 In the 1930s as nations braced for war the German military build up caught Britain and the United States off guard particularly in aviation technology The unending quest for speed resulted in the need for radical alternatives to piston engines In Germany Dr Hans von Ohain was the first to complete a flight worthy turbojet engine for aircraft It was installed in a Heinkel designed aircraft and the Germans began the jet age on August 27 1939 The Germans led the jet race throughout the war and were the first to produce jet aircraft for combat operations In England the doggedly determined Frank Whittle also developed a turbojet engine but without the support enjoyed by his German counterpart The British came second in the jet race when Whittle s engine powered the Gloster Pioneer on May 15 1941 The Whittle Gloster relationship continued and produced the only Allied combat jet aircraft during the war the Meteor which was relegated to Home Defense in Britain In America General Electric copied the Whittle designs and Bell Aircraft contracted to build the first American jet plane On October 1 1942 a lackluster performance from the Bell Airacomet ushered in the American jet age The Yanks forged ahead and had numerous engine and airframe programs in development by the end of the war But the Germans did it right and did it first while the Allies lagged throughout the war only rising to technological prominence on the ashes of the German defeat Pavelec s analysis of the jet race uncovers all the excitement in the high stakes race to develop effective jet engines for warfare and transport **Virtual Airplane vol. 1: Preparations** Witold Jaworski,2021-02-01 The four volumes

Luftwaffe an inexpensive means with which to intercept and attack Allied heavy bombers using a vertically launched semi expendable machine built of wood and armed with a nose mounted honeycomb battery of spin stabilised air to air rockets as well as cannon armament Launched vertically at 36 000ft per minute the pilot was expected to fly within range of the enemy bombers fire his rockets at them ram another bomber eject and parachute to the ground Illustrated with contemporary photographs and stunning commissioned artwork this study examines this inventive yet ultimately unsuccessful attempt by the Luftwaffe to defend against the tide of Allied aircraft that was bombing German cities into the ground
