*Cartographies of the Mind* Massimo Marraffa, Mario De Caro, Francesco Ferretti, 2007-06-04 In the last three decades the level of interaction between philosophy and psychology has increased dramatically As a contribution to this trend this book explores some areas in which this interaction has been very productive or at least highly provocative The interaction between philosophy and psychology can be of different kinds For example psychology can be the subject for philosophy of science In such a case the philosopher of science pursues the usual set of issues explanation reduction etc within the special case of psychology Or philosophy can be the source of proposals for improving psychology Vice versa the findings of psychology can be used to criticize philosophical theories and suggest ways to resolve some traditional philosophical questions about the mind such as the nature of mental representation perception emotion memory consciousness and free will The chapters in this book reflect these different forms of interaction in an effort to clarify issues and debates concerning some traditional cognitive capacities The result is a philosophically and scientifically up to date collection of cartographies of the mind

*Languages of the Mind* Ray S. Jackendoff, 1995-09-25 Over the past two decades Ray Jackendoff has persistently tackled

difficult issues in the theory of mind and related theories of cognitive processing Chief among his contributions is a formal theory that elaborates the nature of language and its relationship to a broad set of other domains Languages of the Mind provides convenient access to Jackendoff's work over the past five years on the nature of mental representations in a variety of cognitive domains in the context of a detailed theory of the level of conceptual structure developed in his earlier books Semantics and Cognition and Consciousness and the Computational Mind The first two chapters summarize the theory of levels of mental representation languages of the mind and their relationships to each other and show how conceptual structure can be approached along lines familiar from syntactic and phonological theory From this background subsequent chapters develop issues in word learning and its pertinence to the Piaget Chomsky debate and the relation of conceptual structure to the understanding of physical space Further chapters apply the theory to domains outside of traditional cognitive science They include an approach to social and cultural cognition modeled on first principles of linguistic theory the beginnings of a formal description of psychodynamic phenomena and a discussion of musical parsing and its relation to musical affect that bears on current disputes in linguistic parsing The final chapter takes up a long standing conflict between philosophical and psychological approaches to the study of mind arguing that mental representations should be regarded purely in terms of the combinatorial organization of brain states and that the philosophical insistence on the intentionality of mental states should be abandoned

**Naming the Mind** Kurt Danziger, 1997-05-06 Intelligence motivation personality learning stimulation behaviour and attitude are just some of the categories that map the terrain of psychological reality These are the concepts which among others underpin theoretical and empirical work in modern psychology and yet these concepts have only recently taken on their contemporary meanings This fascinating work is a persuasive explanation of how modern psychology found its language Kurt Danziger develops an account that goes beyond the taken for granted quality of psychological discourse to offer a profound and broad ranging analysis of the recent evolution of the concepts and categories on which it depends Danziger explores this process and shows how its conse

**Brave New Mind** Peter Dodwell, 2000-06-08 How was the standard model of the mind developed Is it adequate And is there a place in this model for the creative genius of artists scientists and mathematicians This book looks at how scientists investigate the nature of the mind and the brain providing answers to these important questions It opens with a description of the historical roots of cognitive science and analyzes the strengths and weaknesses of the standard model of the mind including its inability to account for the many dramatic features of human achievement The final chapter develops the notion that human creativity and the unfolding of human consciousness demand two things that we acknowledge the central role that ideals play in human knowledge and conduct and that such ideals have no role in the standard model Brave New Mind proposes a new image of humankind that accommodates the place of ideals and creativity in cognition and life without abandoning the scientific ideals of empirical soundness and theoretical rigor
