

Below, we take a close look at the history of the disease in the United States.

Routine reporting of measles cases begins: An average of 6,000 measles-related deaths are reported each year over the course of the decade.

1978

Reducing the infection rate: The CDC sets a goal to eliminate measles from the United States by 1982. Although this goal was not met, widespread vaccination drastically reduces infection rates.

Doubling up: Measles outbreaks among vaccinated school children prompt medical and public health experts to recommend a second dose of the MMR vaccine for all children.

Measles returns: Between January and July, 131 measles cases across 15 states are reported to the CDC — the highest since 1996.

Global reach: More than 30 countries report an increase in measles, contributing to a higher rate of imported cases in the United States.

A new series of outbreaks:
Eleven outbreaks occur,
three of which include more
than 20 cases.

Infection rate climbs: The number of measles cases tops 600 — a 20-year high.

Amusement park outbreak: An outbreak stemming from Disneyland in Anaheim, California, leads to 147 cases of measles in seven states, plus Canada and Mexico. The majority of those who contracted measles were unvaccinated.

Imported cases: The number of measles cases exceeds 370, more than triple the number in 2001. Measles cases are about 10% from outside the United States by 82 people — the most since 2000.

Early infections: More than 120 cases of measles were confirmed in 10 states as of February.
