Abstract: This paper aims to develop and validate a questionnaire to measure the prioritization of strategies to transitioning towards a circular economy and to compare different countries. We proposed a questionnaire based on a five-level ordinal scale to evaluate the 24 strategies of the circular economy under a set of ten criteria given technical issues, as well as social, environmental and economic dimensions of sustainability. Each strategy was defined and evaluated by the participants on the same scale, who are stakeholders involved in the transition towards a circular economy. The validation was conducted by two main procedures, including semantic validation through 17 experts from five countries and statistical validation by 347 survey respondents from 25 countries. The results show that the questionnaire seems a reliable and valid tool to analyze which circular economy strategies countries, regions and cities prioritize. Few studies have been conducted to validate instruments about the circular economy; they are focused at the micro level (industry). Studies that validate measurement instruments regarding the circular economy at the macro level are lacking. This study is the first one to validate the circular economy instrument at the macro level. It can help researchers and practitioners from public and private sectors from a variety of organizations in proposing actions to enable the transition and create performance indicators.

Keywords: circular economy; strategies; sustainability; transition; validation of an instrument

1. Introduction

The traditional “take, make, use and dispose” model, originated and encouraged by the Industrial Revolution, is environmentally incompatible with today’s reality, since it depends on the availability of a large amount of natural resources [1]. A sustainable future requires a system that balances social, environmental, and economic development [2].

In this context, the circular economy (CE) concept emerges, opposing the traditional economy’s paradigm, by proposing a behavioral change in how people consume, use natural resources, and treat waste as a result of production and integrated chains adaptability [3]. In comparison to the linear economy, Korhonen et al. [4] argued that the CE model

The Measure of Form John F. Mosteller, 1991 **A New Approach to Utilitarianism** C.L. Sheng, 2012-12-06 1 1

Utilitarian Theories This book is a monograph on moral philosophy and social philosophy particularly the part of the philosophy of economics that is related to the general distribution problem It presents a comprehensive ethical theory together with an application of the theory to distributive justice The viewpoint of this theory is utilitarian However this theory is different in some crucial points as well as in minor details from all existing forms of utilitarianism Moral philosophy deals essentially with the moral judgment of actions i e whether a moral action is right or wrong good or bad The judgment is usually based on a line of logical reasoning which can be traced to a final reason called the justification or ultimate principle An ethical theory is a self consistent system built upon a basic or ultimate principle An ultimate principle can never be rigorously proven and is not unique Different philosophers establish different ethical theories upon different principles Therefore in the history of development of moral philosophy there have been a large number of ethical theories and schools Even within the same school having the same ultimate principle different philosophers may have different versions of the theory because of small variations in the interpretation of the ultimate principle or in the elaboration of the details **The Essentials of Risk Management, Chapter 11 - New Approaches to Measuring Credit Risk** Michel Crouhy, Dan Galai, Robert Mark, 2005-12-14 Here is a chapter from The Essentials of Risk Management a practical non ivory tower approach that is necessary to effectively implement a superior risk management program Written by three of the leading figures with extensive practical and theoretical experience in the global risk management and corporate governance arena this straightforward guidebook features such topics as governance compliance and risk management how to implement integrated risk management measuring managing and hedging market and more **New Approaches in Software Measurement** Reiner Dumke, 2001-02-21 This book constitutes the thoroughly refereed post proceedings of the 10th International Workshop on Software Measurement IWSM 2000 held in Berlin Germany in October 2000 The 10 revised full papers presented were carefully reviewed and selected for inclusion in the book The papers are organized in topical sections on object oriented software measurement software process improvement function point based software measurement software measurement of special aspects improving the software measurement process **New Approaches Towards the 'Good Life'** Hans-Uwe Otto, Sabine Schäfer, 2014-08-13 The Capability Approach founded by Amartya Sen and Martha Nussbaum offers a justicebased analytical framework for human development The contributions to the present volume show how the Capability Approach can be applied productively in empirical analyses of the life situations of young people and the educational institutions they attend in different parts of the world including Serbia Kosovo Kenya India Greece and Germany Moreover the volume helps to extend the Capability Approach by relating it to different theoretical and methodological approaches such as the capability concept of Paul Ricoeur critical materialism critical discourse analysis and biographical

research Thus the volume delivers comprehensive insights into the social injustices to be found not only on the level of individual life paths but also in institutions and in educational policy while showing innovative ways of applying the Capability Approach in the social sciences

Dirichlet Forms Methods for Poisson Point Measures and Lévy Processes Nicolas Bouleau, Laurent Denis, 2016-01-08 A simplified approach to Malliavin calculus adapted to Poisson random measures is developed and applied in this book Called the lent particle method it is based on perturbation of the position of particles Poisson random measures describe phenomena involving random jumps for instance in mathematical finance or the random distribution of particles as in statistical physics Thanks to the theory of Dirichlet forms the authors develop a mathematical tool for a quite general class of random Poisson measures and significantly simplify computations of Malliavin matrices of Poisson functionals The method gives rise to a new explicit calculus that they illustrate on various examples it consists in adding a particle and then removing it after computing the gradient Using this method one can establish absolute continuity of Poisson functionals such as Lévy areas solutions of SDEs driven by Poisson measure and by iteration obtain regularity of laws The authors also give applications to error calculus theory This book will be of interest to researchers and graduate students in the fields of stochastic analysis and finance and in the domain of statistical physics Professors preparing courses on these topics will also find it useful The prerequisite is a knowledge of probability theory

New Approaches of Protein Function Prediction from Protein Interaction Networks Jingyu Hou, 2017-01-13 New Approaches of Protein Function Prediction from Protein Interaction Networks contains the critical aspects of PPI network based protein function prediction including semantically assessing the reliability of PPI data measuring the functional similarity between proteins dynamically selecting prediction domains predicting functions and establishing corresponding prediction frameworks Functional annotation of proteins is vital to biological and clinical research and other applications due to the important roles proteins play in various biological processes Although the functions of some proteins have been annotated via biological experiments there are still many proteins whose functions are yet to be annotated due to the limitations of existing methods and the high cost of experiments To overcome experimental limitations this book helps users understand the computational approaches that have been rapidly developed for protein function prediction Provides innovative approaches and new developments targeting key issues in protein function prediction Presents heuristic ideas for further research in this challenging area
