## **Measurement Its Concepts Theories And Problems:**

*Measurement* Karel Berka, 2012-12-06 For many years Karel Berka has worked at some of the central problems of the theory of the sciences At once a logician a mathematician a careful student of the physical sciences and the social sciences and a sharp but sympathetic critic of the major philosophies of science in this century Berka brings to this treatise on measurement both his technical mastery and his historical sensitivity We appreciate his careful analysis of his predecessors notably Helmholtz Campbell Holder Bridgman Camap Hempel and Stevens and of his contemporaries such as Brian Ellis and also Patrick Suppes and J L Zinnes The issues to be clarified are familiar but still troubling how to justify the conceptual transition from classification to a metric how to explore ways to provide a quantitative understanding of a qualitative concept indeed how to understand and thereby control the Galilean enthusiasm to measure what is measurable and to try to render measurable what is not so as yet

**The SAGE Handbook of Measurement** Geoffrey Walford, Eric Tucker, Madhu Viswanathan, 2010-04-14 The Sage Handbook of Measurement is a unique methodological resource in which Walford Viswanathan and Tucker draw together contributions from leading scholars in the social sciences each of whom has played an important role in advancing the study of measurement over the past 25 years Each of the contributors offers insights into particular measurement related challenges they have confronted and how they have addressed these Each chapter focuses on a different aspect of measurement so that the handbook as a whole covers the full spectrum of core issues related to design method and analysis within measurement studies The book emphasises issues such as indicator generation and modification the nature and conceptual meaning of measurement error and the day to day processes involved in developing and using measures The Handbook covers the full range of disciplines where measurement studies are common policy studies education studies health studies and business studies

*A Measure of Failure* Mark J. Garrison, 2009-09-10 How did standardized tests become the measure of performance in our public schools In this compelling work Mark J Garrison attempts to answer this question by analyzing the development of standardized testing from the days of Horace Mann and Alfred Binet to the current scene Approaching the issue from a sociohistorical perspective the author demonstrates the ways standardized testing has been used to serve the interests of the governing class by attaching a performance based value to people and upholding inequality in American society The book also discusses the implications that a restructuring of standardized testing would have on the future of education specifically what it could do to eliminate the measure of individual worth based on performance

**Ethics and Accountability in a Context of Governance and New Public Management** Annie Hondeghem, European Group of Public Administration, 1998 Ethics and accountability have become important themes for modern government as in most of the countries there is a severe crisis of legitimacy Increasingly there is a feeling that performance management alone will not solve this crisis Citizens also expect from politicians and public servants ethical responsible conduct As to the ethics however there is a problem Governance and new public management

have raised new problems which cannot be solved by referring to the traditional bureaucratic ethics Devolution and decentralisation processes have enhanced the responsibility of public servants The increase of transparency and openness and the service orientation of public organisations have challenged the traditional values of discretion and equality before the rule The growing interaction between the public and the private sector have raised the question of integrity In light of these developments it is important to update the ethical system or reversibly the traditional values of the public service can question some actual evolutions in government Structuralist Knowledge Representation ,2022-05-16 **Analysis and**

**Synthesis in Mathematics** Michael Otte,Marco Panza,1997 The book discusses the main interpretations of the classical distinction between analysis and synthesis with respect to mathematics In the first part this is discussed from a historical point of view by considering different examples from the history of mathematics In the second part the question is considered from a philosophical point of view and some new interpretations are proposed Finally in the third part one of the editors discusses some common aspects of the different interpretations **Meanest Foundations and Nobler Superstructures**

Ofer Gal,2013-11-11 This book is a historical epistemological study of one of the most consequential breakthroughs in the history of celestial mechanics Robert Hooke s 1635 1703 proposal to compound the celestial motions of the planets of a direct motion by the tangent an attractive motion towards a central body Newton The Correspondence li 297 Henceforth Correspondence This is the challenge Hooke presented to Isaac Newton 1642 1727 in a short but intense correspondence in the winter of 1679 80 which set Newton on course for his 1687 Principia transforming the very concept of the planetary heavens in the process Herivel 301 De Motu Version III 1 It is difficult to overstate the novelty of Hooke s Programme The celestial motions it suggested those proverbial symbols of stability and immutability wherein fact a process of continuous change a deflection of the planets from original rectilinear paths by a central attractive power Correspondence li 313 There was nothing necessary or essential in the shape of planetary orbits Already known to be not circular nor concentricall ibid Hooke claimed that these apparently closed curve Lines should be understood and calculated as mere effects of rectilinear motions and rectilinear attraction And as Newton was quick to realize this also implied that the planets neither move exactly in ellipse nor revolve twice in the same orbit so that there are as many orbits to a planet as it has revolutions Herivel 301 De Motu Version III **Nietzsche, Epistemology, and Philosophy of Science** B.E. Babich,2013-03-09 Nietzsche

Epistemology and Philosophy of Science is the second volume of a collection on Nietzsche and the Sciences featuring essays addressing truth epistemology and the philosophy of science with a substantial representation of analytically schooled Nietzsche scholars This collection offers a dynamic articulation of the differing strengths of Anglo American analytic and contemporary European approaches to philosophy with translations from European specialists notably Carl Friedrich von Weizsäcker Paul Valadier and Walther Ch Zimmerli This broad collection also features a preface by Alasdair MacIntyre Contributions explore Nietzsche s contributions to the philosophy of language and epistemology and include essays on the

social history of truth and the historical and cultural analyses of Serres and Baudrillard as well as new contributions to the philosophy of science including theological and hermeneutical approaches history of science the philosophy of medicine cognitive science and technology

**The Elusive Synthesis: Aesthetics and Science** A.I. Tauber, 2012-12-06 The tension between art and science may be traced back to the Greeks What became natural philosophy and later science has traditionally been posed as a fundamental alternative to poetry and art It is a theme that has commanded central attention in Western thought as it captures the ancient conflict of Apollo and Dionysus over what deserves to order our thought and serve as the aspiration of our cultural efforts The modern schism between art and science was again clearly articulated in the Romantic period and seemingly grew to a crescendo fifty years ago as a result of the debate concerning atomic power The discussion has not abated in the physical sciences and in fact has dramatically expanded most prominently into the domains of ecology and medicine Issues concerning the role of science in modern society although heavily political must be regarded at heart as deeply embedded in our cultural values Although each generation addresses them anew the philosophical problems which lay at the foundation of these fundamental concerns always appear fresh and difficult This anthology of original essays considers how science might have a greater commonality with art than was perhaps realized in a more positivist era The contributors are concerned with how the aesthetic participates in science both as a factor in constructing theory and influencing practice The collection is thus no less than a spectrum of how Beauty and Science might be regarded through the same prism

Perspectives on Time Jan Faye, Uwe Scheffler, Max Urchs, 2013-06-29 Perspectives on Time deals with the problem of time from different perspectives such as logic physics and philosophy It contains 18 previously unpublished papers written by philosophers from various European countries as well as a large introduction about the history and the main situation in the respective fields today The prominent issues which are addressed in this book concern the direction of time the reality of tenses the objectivity of becoming the existence in time and the logical structures of reasoning about time The papers have been written based on different approaches partly depending on whether the authors subscribe to an A theory or a B theory of time Audience Due to the broad variety of approaches the book contains important contributions both for philosophers of science logicians and for scientists working in the field of language and AI

**Science, History and Social Activism** Everett Mendelsohn, Garland E. Allen, Roy M. MacLeod, 2001 This book highlights not only aspects of the career of Everett Mendelsohn one of the premier historians of biology of our age but also a wide range of topics that are now grouped under the general heading of science studies This broad collection includes articles on the relations between science and the military science as narrative natural history and conservation Marxism and science the Human Genome Project and the relation of philosophy to the study of embryonic development in the 18th century This book is essential not only for those who admire Professor Mendelsohn's work but also for those who want a slice of the current field of science studies Audience The main readership of this volume consists of historians of science technology and

medicine and sociologists of science The book will also appeal to philosophers of science and biologists Those interested in Middle Eastern studies will find the discussion of Professor Mendelsohn's political work in this area as well as the article dealing with his activism in general of considerable interest

**Logic and Time** K. Michalski, 2001-11-30 The subject of this study is Husserl's theory of meaning as it appears in his writings from the *Logical Investigations* to the *Crisis of the European Sciences* The first chapter focuses on Husserl's critique of psychologism and the theory of meaning that stems from it The second chapter takes its departure from the question of Husserl's attitude towards the Cartesian tradition then presents the transcendental noematic theory of meaning represented by *The Idea of Phenomenology* Ideas and Cartesian Meditations The third chapter deals with Husserl's interpretation of time consciousness against the background of the development of the problem of time in modern philosophy Husserl often changed his views regarding the question of meaning I have tried to understand the reasons for these changes To do this I have occasionally disturbed the chronological order of his arguments in favour of a consideration of their logical development and coherence Throughout this study but especially in the digression on consciousness and speech and the Postscript I have also attempted to bring to the fore a tension in Husserl's thought between two interpretive strategies the first I call Cartesian the other non Cartesian or hermeneutical

*Schrödinger's Philosophy of Quantum Mechanics* Michael Bitbol, 2012-12-06 This book is the final outcome of two projects My first project was to publish a set of texts written by Schrodinger at the beginning of the 1950's for his seminars and lectures at the Dublin Institute for Advanced Studies These almost completely forgotten texts contained important insights into the interpretation of quantum mechanics and they provided several ideas which were missing or elusively expressed in Schrödinger's published papers and books of the same period However they were likely to be misinterpreted out of their context The problem was that current scholarship could not help very much the reader of these writings to figure out their significance The few available studies about Schrödinger's interpretation of quantum mechanics are generally excellent but almost entirely restricted to the initial period 1925-1927 Very little work has been done on Schrodinger's late views on the theory he contributed to create and develop The generally accepted view is that he never really recovered from his interpretative failure of 1926-1927 and that his late reflections during the 1950's are little more than an expression of his rising nostalgia for the lost ideal of picturing the world not to say for some favourite traditional picture But the content and style of Schrodinger's texts of the 1950's do not agree at all with this melancholic appraisal they rather set the stage for a thorough renewal of accepted representations In order to elucidate this paradox I adopted several strategies

**Analogy in Indian and Western Philosophical Thought** David B. Zilberman, 2006-08-02 This book is unusual in many respects It was written by a prolific author whose tragic untimely death did not allow to finish this and many other of his undertakings It was assembled from numerous excerpts notes and fragments according to his initial plans Zilberman's legacy still awaits its true discovery and this book is a second installment to it after *The Birth of Meaning in Hindu Thought* Kluwer 1988 Zilberman's

treatment of analogy is unique in its approach scope and universality for Western philosophical thought Constantly compared to eastern and especially classical Indian interpretations analogy is presented by Zilberman as an important and in many ways primary method of philosophizing or philosophy building Due to its universality this method can be also applied in linguistics logic social analysis as well as historical and anthropological research These applications are integral part of Zilberman's book A prophetic leap to largely uncharted territories this book could be of considerable interest for experts and novices in the field of analogy alike

**Potentiality, Entanglement and Passion-at-a-Distance** Robert S. Cohen, M. Horne, J.J. Stachel, 1997-06-30 Potentiality Entanglement and Passion at a Distance is a book for theoretical physicists and philosophers of modern physics It treats a puzzling and provocative aspect of recent quantum physics the apparent interaction of certain physical events that cannot share any causal connection These are said to be entangled in some way but an explanation remains elusive Abner Shimony to whom the book is dedicated and others suggest the need to revive the category of what may be seen as a metaphysical potentiality Abner has described these events without actions to link them as passion at a distance not active but passive The discussions gathered here are written by a truly remarkable cast of scientists and philosophers and shed new light on the most profound puzzles of our times *Philosophy of Chemistry* Davis Baird, Eric Scerri, Lee McIntyre, 2011-09-01 This comprehensive volume marks a new standard in scholarship in the emerging field of the philosophy of chemistry Philosophers chemists and historians of science ask some fundamental questions about the relationship between philosophy and chemistry

**Science and the Pacific War** Roy M. MacLeod, 1999-12-31 In 1995 the fiftieth anniversary of the end of the Second World War occasioned many reflections on the place of science and technology in the conflict That the war ended with Allied victory in the Pacific theatre inevitably focussed attention upon the Pacific region and particularly upon the Manhattan project and its outcome It was in the Pacific that Western physics and engineering gave birth to the Atomic Age However the Pacific war had also proved a testing time and a testing space for other disciplines and institutions Extreme environments and operational distances and the fundamental demands of logistics required the Allies and the Japanese to innovate many scientific and technological practices Just as medicine and botany were called upon to fight tropical diseases and insect pests so engineers anthropologists and geographers were called upon to understand local conditions and climates and to work with local peoples whose traditional lives were changed forever by the experience At the same time the war played midwife to a host of new developments not least in scientific intelligence and in chemical and biological weapons which were to acquire far greater importance after 1945

**Observation and Experiment in the Natural and Social Sciences** Maria Carla Galavotti, 2006-04-18 According to a long tradition in philosophy of science a clear cut distinction can be traced between a context of discovery and a context of justification This tradition dates back to the birth of the discipline in connection with the Circles of Vienna and Berlin in the twenties and thirties of last century Convinced that only the context of justification is pertinent to philosophy of science logical empiricists

identified its goal with the rational reconstruction of scientific knowledge taken as the clarification of the logical structure of science through an analysis of its language and methods Stressing justification as the proper field of application of philosophy of science logical empiricists intended to leave discovery out of its remit The context of discovery was then discarded from philosophy of science and left to sociology psychology and history The distinction between context of discovery and context of justification goes hand in hand with the tenet that the theoretical side of science can and should be kept separate from its observational and experimental components Further the final abstract formulation of theories should be analysed apart from the process behind it resulting from a tangle of context dependent factors This conviction is reflected by the distinction between theoretical and observational sentences underpinning the Hempelian view of theories as nets whose knots represent theoretical terms floating on the plane of observation to which it is anchored by rules of interpretation

**The Evolutionary Biology Papers of Elie Metchnikoff** H. Gourko,D. Williamson,A.I. Tauber,2013-04-17 Elie Metchnikoff 1845 1916 winner of the Nobel Prize in 1907 for his contributions to immunology was first a comparative zoologist who working in the wake of Darwin s On the Origin of Species made seminal contributions to evolutionary biology His work in comparative embryology is best known in regard to the debates with Ernst Haeckel concerning animal genealogical relationships and the theoretical origins of metazoans But independent of those polemics Metchnikoff developed his phagocytosis theory of immunity as a result of his early comparative embryology research and only in examining the full breadth of his work do we appreciate his signal originality Metchnikoff s scientific papers have remained largely untranslated into English Assembled here annotated and edited are the key evolutionary biology papers dating from Metchnikoff s earliest writings 1865 to the texts of his mature period of the 1890s which will serve as an invaluable resource for those interested in the historical development of evolutionary biology

**Fact, Faith and Fiction in the Development of Science** R. Hooykaas,2013-06-29 In this posthumous book the late Professor R Hooykaas 1906 1994 conveys a lifetime of historical thought about modes of scientific advance over the centuries In what variety of ways has the human mind with all its subjectivity and its capacity for self deception but also its piercing gifts of discovery managed to come to terms with the whimsical tricks of nature Central to this erudite penetrating and widely ranging study is Hooykaas s distinction between facts given by nature yet entirely subject to our mode of interpreting them faith broad conceptions like the idea of order of simplicity or of harmony and fictions in the sense of those daring intellectual tools such as theories and hypotheses and models which reflect the scientist s creative imagination Case studies drawn from the history of all branches of science including chemistry and the earth sciences and from Antiquity to the present day serve to widen and to deepen the understanding of every reader whether a historian of science or not with a desire to learn more about the realities of the scientific pursuit
