Abstract

Effective handling of vocational technology education by all stakeholders pave way for sustainable development. Building construction which is one of the vocational electives in Senior Secondary School is poorly taught. It is regrettable to experience that a country crying for technological breakthroughs and emancipation cannot at this crucial time of technological age impart practical skills to the recipients of her technology education. Building construction which is an integral part of vocational technology is worst hit in this imbroglio. It is observed that the teaching of building construction is too theoretical to the detriment of the psychomotor aspect of the programme. The difficulties in imparting the practical skills in this subject is caused by the teachers not possessing adequate skills in the subject, inadequacy of teaching materials and facilities, curriculum invalidity in terms of teachability and learnability, poor teaching strategies to mention but a few. This paper, therefore, reappraise the state of affairs in the teaching of building construction and advance some strategies on how the subject can move forward.

INTRODUCTION

The importance of building technology which is an integral part of technical and vocational education cannot be over emphasized, since this field of study represent a core indices of national development. A major distinction between an advanced country and a developing one is to a large measure the difference between their levels of scientific and technological development in various areas of technology education, building technology inclusive. Thus, it is no exaggeration to assert that technology education is also the bedrock upon which advance nations are based (Egboh, 2009). Lack of technological capacity has made developing (Third World) nations to be relatively poor. Developing nations are poor because of their negligible investment in science and technological know-how and their people do not have the capacity to inform themselves in a competitive knowledge driven world. Increased competition in a global market place, adds to the need and urgency to get the right people, with the right skills, in the right place, at the right time (Odu, 2007).

The Senior Secondary School constitutes the beginning of what may be described as the finished product of a lower level of skill and aptitude. The level is expected to raise a generation of students who can think for themselves, respect the views and feelings of others, respect the dignity of labour, and live as good citizens. The curriculum in technology education has been well articulated with functionality and the integration of theory and practical/workshops as paramount aims. Creativity and improvisation are also highly rated.

Vocational Technical Education/Pre-Professional Education in Secondary Schools

At Senior Secondary Schools, technical colleges and vocational centres, vocational technology education is meant for either pre-professional training or for production of low-level manpower (skilled labour) i.e. artisans, craftsmen and master craftsmen for the labour market. Vocational technical education in this level requires a relatively low-cognitive and psychomotor
