A Web-Based Approach to Measure Skill Mismatches and Skills Profiles for a Developing Country: Jeisson Arley Cárdenas Rubio, 2020-12-30 Several interdisciplinary studies highlight imperfect information as a possible explanation of skill mismatches which in turn has implications for unemployment and informality rates Despite information failures and their consequences countries like Colombia where informality and unemployment rates are high lack a proper labour market information system to identify skill mismatches and employer skill requirements One reason for this absence is the cost of collecting labour market data Recently the potential use of online job portals as a source of labour market information has gained the attention of researchers and policymakers since these portals can provide quick and relatively low cost data collection As such these portals could be of use for Colombia However debates continue about the efficacy of this use particularly concerning the robustness of the collected data This book implements a novel mixed methods approach such as web scraping text mining machine learning etc to investigate to what extent a web based model of skill mismatches can be developed for Colombia The main contribution of this book is demonstrating that with the proper techniques job portals can be a robust source of labour market information In doing so it also contributes to current knowledge by developing a conceptual and methodological approach to identify skills occupations and skill mismatches using online job advertisements which would otherwise be too complex to be collected and analysed via other means By applying this novel methodology this study provides new empirical data on the extent and nature of skill mismatches in Colombia for a considerable set of non agricultural occupations in the urban and formal

economy Moreover this information can be used as a complement to household surveys to monitor potential skill shortages Thus the findings are useful for policymakers statisticians and education and training providers among others *The ... Why Is Labor Receiving a Smaller Share of Global Income? Theory and Empirical Evidence Mai Chi Dao, Ms. Mitali Das, Zsoka Koczan, Weicheng Lian, 2017-07-25 This paper documents the downward trend in the labor share of global income since the early 1990s as well as its heterogeneous evolution across countries industries and worker skill groups using a newly assembled dataset and analyzes the drivers behind it Technological progress along with varying exposure to routine occupations explains about half the overall decline in advanced economies with a larger negative impact on middle skilled workers In emerging markets the labor share evolution is explained predominantly by global integration particularly the expansion of global value chains that contributed to raising the overall capital intensity in production

The Monetary Value of Time Joyce I. Warnacut, 2017-11-22 Although there are numerous books on alternative accounting methods such as Lean accounting none focus on the impact of time and how accounting practices can be modified to acknowledge the power of time This book addresses this need The Monetary Value of Time Why Traditional Accounting Systems Make Customers Wait presents a framework for assessing the value of time in terms of organizational strategy and competitive advantage The framework presented will enable organizations to develop consistent measures and ensure that their cost accounting system isn't motivating behaviors that add to lead time and make customers wait The framework outlined in this book is relevant to the managerial and cost accounting practices in today's manufacturing environment which is increasingly moving away from mass production to custom manufacturing The framework is supported by high level metrics which are reinforced by operational metrics This is supported by accounting data that recognize the value of time Pricing models that incorporate the concept of time are presented The book provides many examples of how the use of standard costing and traditional accounting practices in a high mix low volume production environment can produce contradictory or even inaccurate results that form the basis for poor decisions that may actually move your organization farther from its objectives The book arms readers with options for overcoming traditional barriers by applying direct costs at an item level while applying overheads at a macro or value stream level For example while GAAP requires overhead application for inventory valuation a common misconception is that overhead must be applied at an item level In fact overhead can be absorbed by one journal entry Demonstrating the linkages between time based accounting data and meaningful business metrics that drive bottom line results the book presents methods and metrics that have been successfully applied by the author in manufacturing environments
