On the Inside of a Marble Gavin Bascom, 2017-07-07 Keeping in mind that we can only see the universe from the comfort of our home galaxy Bascom begins his text by meticulously laying the necessary groundwork to understand the Big Bang's mathematics without using any equations He then paints a freeze frame picture of our universe as if we had taken a three dimensional picture with a giant camera Within this picture he traces forces beginning with the smallest a single atom to the biggest the cosmos keeping in mind that in this frozen moment everything further away from the observer spatially is also further away from the observer in time that is older Soon a very real and very vivid image of the Big Bang appears especially in things that are loud or hot echoing down through time and into our everyday lives reflected in every atom during every measurement Then slowly but deliberately Bascom unfreezes this picture ratcheting each moment from one to the next showing us how and why quantum particles are constantly in contact with the Big Bang and why that allows the particles to pop in and out of existence from moment to moment what a photon is and what exactly we mean when we say that free space has energy Whether you're interested in the Big Bang the weirdness of quantum mechanics or simply enjoy thinking about the biggest loudest and oldest things in our universe this book will help you question your deepest notions about time and space while staying firmly rooted in empirical observation Throughout the text Bascom sidesteps traditional non fiction modes using colorful explanations and vivid imagery to place the reader in simultaneous contact with both the Big Bang and fundamental particles As a result Bascom provides the tools and language necessary to contemplate the strangeness of our universe
