Preumont,2006-04-11 My objective in writing this book was to cross the bridge between the structural dynamics and control communities while providing an overview of the potential of SMART materials for sensing and actuating purposes in active vibration control I wanted to keep it relatively simple and focused on systems which worked This resulted in the following i I restricted the text to fundamental concepts and left aside most advanced ones i.e robust control whose usefulness had not yet clearly been established for the application at hand ii I promoted the use of collocated actuator sensor pairs whose potential I thought was strongly underestimated by the control community iii I emphasized control laws with guaranteed stability for active damping the wide ranging applications of the IFF are particularly impressive iv I tried to explain why an accurate prediction of the transmission zeros usually called anti resonances by the structural dynamicists is so important in evaluating the performance of a control system v I emphasized the fact that the open loop zeros are more difficult to predict than the poles and that they could be strongly influenced by the model truncation high frequency dynamics or by local effects such as membrane strains in piezoelectric shells especially for nearly collocated distributed actuator sensor pairs this effect alone explains many disappointments in active control systems

chapters that cover both theoretical concepts and practical issues addressed through the use of modelling assembly and FEA. The presented applications are clearly written and easy to understand with step by step instructions and ample explanations, illustrations and figures. Many of the tutorials start from the beginning including the parametric modelling of the part and the interpretation of FEM analysis results. From students to engineers all are advised to open and follow the pages of this book with interest and perseverance to patiently go through all the explanations of the presented tutorials to explore the proposed FEM problems and then to successfully apply the knowledge acquired in their professional activities. **International**
