Chhieng, Gene P. Siegal, 2007-05-31 by CDs but we continue to utilize the same general format of morning didactics and afternoon glass slide review and small group interactions One of our biggest successes was in the ever expanding set of didactic lecture notes and radiologic gross microscopic ultrastructural and other images that course participants received so it wasn't much of a surprise when we were approached by the publisher to consider creating an updated compilation of some of the best talks and packaging them in a monograph available to a broader population of physicians and scientists With the extraordinary attention to detail that he is known for my co-editor David Chhieng has been both the brains and the brawn of this project resulting in the bringing together of such a collection while trying to be sensitive and representative of the various branches of pathology reflected in the actual course From surgical pathology chapters cover select topics in endocrine gynecologic GU and GI pathology with contributions from Walter Bell Michael Conner Katrin Klemm and Audrey Lazenby respectively Tom Winokur has begun to prepare us for the near future with a treatise on molecular markers in breast cancer The interactive nature of cytopathology and surgical pathology are brought together by Claudia Castro now at the U.T. formation of acrylamide heightened interest in the chemistry biochemistry and safety of this compound Acrylamide induced neurotoxicity reproductive toxicity genotoxicity and carcinogenicity are potential human health risks based on animal studies Because exposure of humans to acrylamide can come from both external sources and the diet there exists a need to develop a better understanding of its formation and distribution in food and its role in human health To contribute to this effort experts from eight countries have presented data on the chemistry analysis metabolism pharmacology and toxicology of acrylamide Specifically covered are the following aspects exposure from the environment and the diet biomarkers of exposure risk assessment epidemiology mechanism of formation in food biological alkylation of amino acids peptides proteins and DNA by acrylamide and its epoxide metabolite glycidamide neurotoxicity reproductive toxicity and carcinogenicity protection against adverse effects and possible approaches to reducing levels in food Cross fertilization of ideas among several disciplines in which an interest in acrylamide has developed including food science pharmacology toxicology and medicine will provide a better understanding of the chemistry and biology of acrylamide in food and can lead to the development of food processes to decrease the acrylamide content of the diet

Immune system

disorders: from molecular mechanisms to clinical implications Mauricio César De Marzi,Marisa Mariel Fernandez,Ruben Dario Motrich ,Matias Ostrowski,2024-10-17 In recent years the increase in knowledge about the functioning of the immune system has revealed not only its importance in the defense against external agents such as pathogens or toxins but also in the control of tumor cells and the importance of the processes of inflammation or immunological tolerance On the one hand all this knowledge has allowed a better understanding of the putative pathogenic consequences of immune system dysfunction which includes inflammatory autoimmune and immunosuppressive diseases among others On the other hand current knowledge about immunoregulation has paved the way to better prevent or control transplantation rejection However such mechanisms underlying immune dysregulation are highly variable depending on the

type of pathology systemic chronic inflammatory diseases autoinflammatory diseases autoimmune disorders immunosuppression and on characteristics of the host such as sex genetics nutritional status etc Given the wide variety of pathologies that are a consequence of excessive inefficient or inadequate induction of immune responses the study of factors involved in the dysregulation of the immune system has gained great attention during the last decades Oxygen Transport to Tissue XXVI Paul Okunieff, Jacqueline P. Williams, Yuhchyan Chen, 2006-06-18 The International Society of Oxygen Transport to Tissue ISOTT was founded in 1973 to provide a forum for bioengineers basic scientists physiologists and physicians to discuss new data original theories new interpretations of old data and new technologies for the measurement of oxygen At each annual meeting all posters are presented orally along with plenary lectures and all presentations are given in a general session attended by everyone Each meeting has had a specific focus ranging from neonatology to physical chemistry to cancer biology The Society has helped to build many careers through opportunities to meet leaders in the field and through awards made to young physicians and scientists The Society also through cross fertilization of ideas and scientific comradery has inspired many breakthroughs in clinical medicine that now benefit mankind I find myself president of the society after having been a winner of the Melvin Knisely Award for young scientists in 1991 The 2003 meeting emphasized the role of oxygen and oxygen measurement in tumor growth metastasis physiology and treatment resistance Additionally however completely novel approaches to measurement of tissue oxygen were presented notably work by Dr Takahashi and molecular methods for estimating tissue oxygen were evaluated Papers discussing other aspects of oxygen measurement and pathophysiology were presented including in vivo ESR spectroscopy notably including Dr Swartz and colleagues exercise physiology organ transplant outcome discussed by Dr Cicco our 2004 president circulatory physiology and cerebral oxygenation notably including Dr Chance

Single-cell analysis on the pathophysiology of autoimmune diseases Shiang-Jong Tzeng,InKyeom Kim ,Kuang-Hui Sun,2024-07-11 Despite increasing research to facilitate the understanding of the pathophysiology of autoimmune disorders the exact cause of the incident of autoimmunity is unknown Current concepts on the occurrence of autoimmune diseases are thought to involve autoantigens genetic predisposition disease triggers and the breakdown of immune tolerance In addition to the breakdown of immunological tolerance one key characteristic of autoimmune disease is that within a single disease there is considerable variability in the clinical manifestation and severity in patients Single cell omics have emerged as an effective means of unraveling the complexity and heterogeneity of chronic disease development and therapeutic responses Recently advances in cutting edge spatial profiling of diverse cell types have increased our understanding of how distinct cells interact and orchestrate at specific locations across a tissue landscape in both physiological and pathological contexts at the single cell level
