Mechanizing Proof Donald MacKenzie,2004-01-30 Most aspects of our private and social lives our safety the integrity of the financial system the functioning of utilities and other services and national security now depend on computing But how can we know that this computing is trustworthy In Mechanizing Proof Donald MacKenzie addresses this key issue by investigating the interrelations of computing risk and mathematical proof over the last half century from the perspectives of history and sociology His discussion draws on the technical literature of computer science and artificial intelligence and on extensive interviews with participants MacKenzie argues that our culture now contains two ideals of proof proof as traditionally conducted by human mathematicians and formal mechanized proof He describes the systems constructed by those committed to the latter ideal and the many questions those systems raise about the nature of proof He looks at the primary social influence on the development of automated proof the need to predict the behavior of the computer systems upon which human life and security depend and explores the involvement of powerful organizations such as the National Security Agency He concludes that in mechanizing proof and in pursuing dependable computer systems we do not obviate the need for trust in our collective human judgment , Argumentation in Multi-Agent Systems Peter McBurney,Iyad Rahwan,Simon D. Parsons,2011-06-24 This book constitutes the thoroughly reviewed post proceedings of the 7th International Workshop on Argumentation in Multi Agent Systems ArgMas 2010 held in Toronto Canada in May 2010 as a satellite workshop of AAMAS 2010 The 14 revised full papers taken from ArgMAS 2010 were carefully reviewed and improved during two rounds of revision Also included are 4 invited papers based on presentations on argumentation at the AAMAS 2010 main conference All together the 18 papers included in the book give a representative overview on current research on argumentation in multi agent systems The papers are organized in topical sections on practical reasoning and argument about action applications and theoretical aspects *Automata, Languages, and Programming* Fedor V. Fomin,Rusins Freivalds,Marta Kwiatkowska,David Peleg,2013-07-03 This two volume set of LNCS 7965 and LNCS 7966 constitutes the refereed proceedings of the 40th International Colloquium on Automata Languages and Programming ICALP 2013 held in Riga Latvia in July 2013 The total of 124 revised full papers presented were carefully reviewed and selected from 422 submissions They are organized in three tracks focussing on algorithms complexity and games logic semantics automata and theory of programming and foundations of networked computation **Phenomenology, Logic, and the Philosophy of Mathematics** Richard L. Tieszen,2005-06-06 In this 2005 book logic mathematical knowledge and objects are explored alongside reason and intuition in the exact sciences *Formal Methods for Nonmonotonic and Related Logics* Karl Schlechta,2018-11-03 The two volumes in this advanced textbook present results proof methods and translations of motivational and philosophical considerations to formal constructions In the associated Vol I the author explains preferential structures and abstract size In this Vol II he presents chapters on theory revision and sums defeasible inheritance theory interpolation neighbourhood semantics and deontic logic abstract independence and various aspects of nonmonotonic and

other logics In both volumes the text contains many exercises and some solutions and the author limits the discussion of motivation and general context throughout offering this only when it aids understanding of the formal material in particular to illustrate the path from intuition to formalisation Together these books are a suitable compendium for graduate students and researchers in the area of computer science and mathematical logic *Reactive Kripke Semantics* Dov M. Gabbay,2013-11-29 This text offers an extension to the traditional Kripke semantics for non classical logics by adding the notion of reactivity Reactive Kripke models change their accessibility relation as we progress in the evaluation process of formulas in the model This feature makes the reactive Kripke semantics strictly stronger and more applicable than the traditional one Here we investigate the properties and axiomatisations of this new and most effective semantics and we offer a wide landscape of applications of the idea of reactivity Applied topics include reactive automata reactive grammars reactive products reactive deontic logic and reactive preferential structures Reactive Kripke semantics is the next step in the evolution of possible world semantics for non classical logics and this book written by one of the leading authorities in the field is essential reading for graduate students and researchers in applied logic and it offers many research opportunities for PhD students **Artificial Intelligence. An International Perspective** Max Bramer,2009-09-19 Artificial Intelligence AI is a rapidly growing inter disciplinary field with a long and distinguished history that involves many countries and considerably pre dates the development of computers It can be traced back at least as far as Ancient Greece and has evolved over time to become a major subfield of computer science in general This state of the art survey not only serves as a position paper on the field from the viewpoint of expert members of the IFIP Technical Committee 12 its Working Groups and their colleagues but also presents overviews of current work in different countries The chapters describe important relatively new or emerging areas of work in which the authors are personally involved including text and hypertext categorization autonomous systems affective intelligence AI in electronic healthcare systems artifact mediated society and social intelligence design multilingual knowledge management agents intelligence and tools intelligent user profiling and supply chain business intelligence They provide an interesting international perspective on where this significant field is going at the end of the first decade of the twenty first century **Ambient Intelligence** Boris De Ruyter,Achilles Kameas,Periklis Chatzimisios,Irene Mavrommati,2015-10-31 This book constitutes the refereed proceedings of the 12th European Conference on Ambient Intelligence AmI 2015 held in Athens Greece in November 2015 The 21 revised full papers presented together with 5 short papers were carefully reviewed and selected from 48 submissions Over the past 20 years the vision of Ambient Intelligence has gradually materialized into a plethora of technologies and devices which are being introduced into almost every aspect of everyday life thus affecting our abilities activities behavior and in the end shaping a new way of thinking Modular Ontologies Heiner Stuckenschmidt,Christine Parent,Stefano Spaccapietra,2009-05-25 This book constitutes a collection of research achievements mature enough to provide a firm and reliable basis on modular ontologies It gives the

reader a detailed analysis of the state of the art of the research area and discusses the recent concepts theories and techniques for knowledge modularization The 13 papers presented in this book were all carefully reviewed before publication They have been organized in three parts Part I gives a general introduction to the idea and issues characterizing modularization and offers an in depth analysis of properties criteria and knowledge import techniques for modularization Part II describes four major research proposals for creating modules from an existing ontology either by partitioning an ontology into a collection of modules or by extracting one or more modules from the ontology Part III reports on collaborative approaches where modules that pre exist are linked together through mappings to form a virtual large ontology

Materializing the Web of Linked Data Nikolaos Konstantinou,Dimitrios-Emmanuel Spanos,2015-04-10 This book explains the Linked Data domain by adopting a bottom up approach it introduces the fundamental Semantic Web technologies and building blocks which are then combined into methodologies and end to end examples for publishing datasets as Linked Data and use cases that harness scholarly information and sensor data It presents how Linked Data is used for web scale data integration information management and search Special emphasis is given to the publication of Linked Data from relational databases as well as from real time sensor data streams The authors also trace the transformation from the document based World Wide Web into a Web of Data Materializing the Web of Linked Data is addressed to researchers and professionals studying software technologies tools and approaches that drive the Linked Data ecosystem and the Web in general   Johan van Benthem on Logic and Information Dynamics Alexandru Baltag,Sonja Smets,2014-08-27 This book illustrates the program of Logical Informational Dynamics Rational agents exploit the information available in the world in delicate ways adopt a wide range of epistemic attitudes and in that process constantly change the world itself Logical Informational Dynamics is about logical systems putting such activities at center stage focusing on the events by which we acquire information and change attitudes Its contributions show many current logics of information and change at work often in multi agent settings where social behavior is essential and often stressing Johan van Benthem s pioneering work in establishing this program However this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own The reader will see the state of the art in such topics as information update belief change preference learning over time and strategic interaction in games Moreover no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we think of logic philosophy and computation Thus very much in line with van Benthem s work over many decades the volume shows how all these

disciplines form a natural unity in the perspective of dynamic logicians broadly conceived exploring their new themes today And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations **Dynamic Logic. New Trends and Applications** Alexandre Madeira,Mário Benevides,2017-12-30 This book constitutes the proceedings of the First International Workshop on Dynamic Logic DALI 2017 held in Brasilia Brazil in September 2017 Both its theoretical relevance and practical potential make Dynamic Logic a topic of interest in a number of scientific venues from wide scope software engineering conferences to modal logic specific events The workshop is promoted by an R D project on dynamic logics for cyber physical systems The 12 full papers presented in this volume were carefully reviewed and selected from 25 submissions The workshop is based on the project DaL Dynamic logics for cyber physical systems towards contract based design **Biomedical Engineering and Computational Intelligence** João Manuel R. S. Tavares,Nilanjan Dey,Amit Joshi,2019-07-29 This book reports on timely research at the interface between biomedical engineering and intelligence technologies applied to biology and healthcare It covers cutting edge methods applied to biomechanics and robotics EEG time series analysis blood glucose prediction models among others It includes ten chapters which were selected upon a rigorous peer review process and presented at the 1st World Thematic Conference Biomedical Engineering and Computational Intelligence BIOCOM 2018 held in London United Kingdom during October 30 31 2018 *Programming Languages and Systems* Chung-chien Shan,2013-12-11 This book constitutes the refereed proceedings of the 11th Asian Symposium on Programming Languages and Systems APLAS 2013 held in Melbourne Australia in December 2013 The 20 regular papers presented together with the abstracts of 3 invited talks were carefully reviewed and selected from 57 submissions The papers cover a variety of foundational and practical issues in programming languages and systems
