Number Problems and Computers Donald D. Spencer, 1988-01-01 Computer-Based Learning Environments and Problem Solving Erik De Corte, Marcia C. Linn, Heinz Mandl, Lieven Verschaffel, 2013-06-29 Most would agree that the acquisition of problem solving ability is a primary goal of education. The emergence of the new information technologies in the last ten years has raised high expectations with respect to the possibilities of the computer as an instructional tool for enhancing students' problem solving skills. This volume is the first to assemble, review and discuss the theoretical, methodological and developmental knowledge relating to this topical issue in a multidisciplinary confrontation of highly recommended experts in cognitive science, computer science, educational technology and instructional psychology. Contributors describe the most recent results and the most advanced methodological approaches relating to the application of the computer for encouraging knowledge construction, stimulating higher order thinking and problem solving and creating powerful learning environments for pursuing those objectives. The computer applications relate to a variety of content domains and age levels.

The content has been chosen to provide an introduction to the theory and techniques relevant to the software of a broad class of computer applications. It is supported by examples of particular applications and their enabling technologies. This Encyclopedia will be of value to new practitioners who need a concise overview and established practitioners who need to read about the penumbra surrounding their own specialities. It will also be useful to professionals from other disciplines who need to gain some understanding of the various aspects of software engineering which underpin complex information and control systems and the thinking behind them PC Mag , 1984-04-17 PCMag.com is a leading authority on technology delivering Labs based independent reviews of the latest products and services. Tromp, 1989 **Modeling Groundwater Flow and Pollution** Jacob Bear, Arnold Verruijt, 2012-12-06 Groundwater constitutes an important component of many water resource systems supplying water for domestic use for industry and for agriculture. Management of a groundwater system, an aquifer or a system of aquifers, means making such decisions as to the total quantity of water to be withdrawn annually, the location of wells for pumping and for artificial recharge and their rates and control conditions at aquifer boundaries. Not less important are decisions related to groundwater quality. In fact, the quantity and quality problems cannot be separated. In many parts of the world, with the increased withdrawal of ground water, often beyond permissible limits, the quality of groundwater has been continuously deteriorating, causing much concern to both suppliers and users. In recent years, in addition to general groundwater quality aspects, public attention has been focused on groundwater contamination by hazardous industrial wastes, by leachate from landfills, by oil spills and by agricultural activities such as the use of fertilizers, pesticides and herbicides and by radioactive waste in repositories located in deep geological formations. To mention some of the most acute contamination sources. In all these cases, management means making decisions to achieve goals without violating specified constraints. In order to enable the planner or the decision maker to compare alternative modes of action and to ensure that the constraints are not violated, a tool is needed that will provide information about the response of the system, the aquifer, to various alternatives Scientific and Technical Aerospace Reports , 1989 Computerworld , 2004-11-15 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide.
