Guide To Pamir, The: Theory And Use Of Parameterized Adaptive Multidimensional Integration Routines Stephen L Adler, 2012-10-25 PAMIR Parameterized Adaptive Multidimensional Integration Routines is a suite of Fortran programs for multidimensional numerical integration over hypercubes simplexes and hyper rectangles in general dimension p intended for use by physicists applied mathematicians computer scientists and engineers The programs which are available on the internet at www.pamir.integrate.com and are

free for non profit research use are capable of following localized peaks and valleys of the integrand Each program comes with a Message Passing Interface MPI parallel version for cluster use as well as serial versions The first chapter presents introductory material similar to that on the PAMIR website and the next is a manual giving much more detail on the use of the programs than is on the website They are followed by many examples of performance benchmarks and comparisons with other programs and a discussion of the computational integration aspects of PAMIR in comparison with other methods in the literature The final chapter provides details of the construction of the algorithms while the Appendices give technical details and certain mathematical derivations

Parallel Computing Roman Trobec, Marián Vajteršic, Peter Zinterhof, 2009-06-18 The use of parallel programming and architectures is essential for simulating and solving problems in modern computational

practice There has been rapid progress in microprocessor architecture interconnection technology and software development which are increasing directly the rapid growth of parallel and distributed computing However in order to make these benefits usable in practice this development must be accompanied by progress in the design analysis and application aspects of parallel algorithms In particular new approaches from parallel numerics are important for solving complex computational problems on parallel and or distributed systems The contributions to this book are focused on topics most concerned in the trends of today's parallel computing These range from parallel algorithmic programming tools network computing to future parallel computing Particular attention is paid to parallel numerics linear algebra differential equations numerical integration number theory and their applications in computer simulations which together form the kernel of the monograph We expect that the book will be of interest to scientists working on parallel computing doctoral students teachers engineers and mathematicians dealing with numerical applications and computer simulations of natural phenomena

Error Control and Adaptivity in Scientific Computing Haydar Bulgak, Christoph Zenger, 2012-12-06 One of the main ways by which we can understand complex processes is to create computerised numerical simulation models of them Modern simulation tools are not used only by experts however and reliability has therefore become an important issue meaning that it is not sufficient for a simulation package merely to print out some numbers claiming them to be the desired results An estimate of the associated error is also needed The errors may derive from many sources errors in the model errors in discretization rounding errors etc

Unfortunately this situation does not obtain for current packages and there is a great deal of room for improvement Only if

the error can be estimated is it possible to do something to reduce it The contributions in this book cover many aspects of the subject the main topics being error estimates and error control in numerical linear algebra algorithms closely related to the concept of condition numbers interval arithmetic and adaptivity for continuous models **Multilevel Modeling** Steven P. Reise, Naihua Duan, 2003-01-30 This book appeals to researchers who work with nested data structures or repeated measures data including biomed health researchers clinical intervention researchers and developmental educational psychologists Also some potential as a grad lvl tex
