Advanced Study Institute New Vistas in Electro Nuclear Physics was held in Banff Alberta Canada from August 22 to September 4 1985 This volume contains the lecture notes from that Institute The idea to organize this Institute coincided with the award of funding for a pulse stretcher ring at the University of Saskatchewan's Linear Accelerator Laboratory This together with the high level of interest in electron accelerators worldwide convinced us that it was an appropriate time to discuss the physics to be learned with such machines In particular that physics which requires high energy and or high duty cycle accelerators for its extraction was intended to be the focus of the Institute Thus the scope of the lectures was wide with topics ranging from the structure of the trinucleons to quark models of nucleons QCD and QHD The theme however was that we are just trying to understand the nucleus and that the electromagnetic probe can serve as a powerful tool in such a quest

Physics With GeV-particle Beams - Proceedings Of The International Conference Hartmut Machner, Kornel Sistemich, 1995-05-31 The investigation of hadronic and nuclear probes with protons and electrons in the energy range of a few GeV is of great importance for the understanding of the properties of nucleons and mesons as well as of their interaction Experimental results from studies with these beams provide the basis for the development and the tests of theoretical approaches in the energy regime of non perturbative QCD They can also clarify the effect of the nuclear medium on elementary reactions The conference has reviewed the present status of this field of research The topics have been The conference topics comprised investigations near energy thresholds in the tradition of the conferences on Particle Production near Threshold in Nashville IN USA 1990 and Uppsala Sweden 1992

The 12th Winter Workshop on Nuclear Dynamics carried on the tradition started in 1978 of bringing together scientists working in all regimes of nuclear dynamics This broad range of related topics allows the researcher attending the Workshop to be exposed to work that normally would be considered outside his her field but could po tentially add a new dimension to the understanding of his her work At Snowbird we brought together experimentalists working with heavy ion beams from 10 MeV nucleon up to 200 GeV nucleon and theoretical physicists working in diverse areas ranging from antisymmetrized fermionic dynamics to perturbative quantum chromo dynamics Fu ture work at RHIC was discussed also with presentations from several of the experimen tal groups In addition several talks addressed issues of cross disciplinary relevance from the study of water drop collisions to the multi fragmentation of buckyballs Clearly the field of nuclear dynamics has a bright future The understanding of the nuclear equation of state in all of its manifestations is being expanded on all fronts both theoretically and experimentally Future Workshops on Nuclear Dynamics will certainly have much progress to report Gary D Westfall Wolfgang Bauer Michigan State Universzty v
