Thales to Huxley Edward Clodd, 2019-12-04 In *Pioneers of Evolution from Thales to Huxley*, Edward Clodd meticulously chronicles the evolution of evolutionary thought from ancient philosophers to the influential figures of the 19th century. The book is structured around significant intellectual milestones, intertwining biography, philosophy, and science in a narrative that captures the intellectual fervor of the time. Clodd's literary style is both accessible and scholarly, reflecting his dual commitment to rigorous academic analysis and the broader dissemination of scientific ideas. By contextualizing the contributions of key figures such as Aristotle, Lamarck, and Darwin within the prevailing scientific and cultural paradigms, Clodd showcases the gradual yet revolutionary shift in understanding life's complexity and interconnectedness. Edward Clodd, an English banker and writer, was deeply influenced by the prevailing scientific inquiries of his time. His diverse background in finance combined with a profound interest in natural science fueled his desire to explore and document the historical context of evolutionary thought. As a contemporary of Darwin, Clodd was drawn to the debates surrounding evolution and sought to illuminate the lineage of ideas that predated and paved the way for Darwinian theory. *Pioneers of Evolution* is a compelling read for anyone interested in the history of science, philosophy, or the evolution of ideas. Clodd's engaging prose and comprehensive research provide an enlightening perspective on the foundational figures who shaped our understanding of life on Earth. This book is not only a testament to intellectual heritage but also an invitation for readers to appreciate the collective endeavor of human thought in the quest to understand our origins. **Pioneering Research** Donald W.

Braben, 2004-05-31 Ask questions, not on the agenda. Explore ideas wherever they lead. Pursue goals because they're important. Create options not yet perceived. According to premier researcher Don Braben, these are the vital intellectual processes that underlie all human achievement: the kinds of risk-taking activities that have made our civilization what it is today. Yet warns Braben, the same pioneer spirit that fueled our meteoric industrial and scientific growth is now being undermined by a growing climate of corporate caution and conformity. In this groundbreaking manifesto on the importance of scientific freedom, Braben asserts that the greatest long-term risks facing humanity will not come from weapons of mass destruction, prolonged global war, devastating disease, or famine, or even from extinction by a huge wayward meteor. Rather, they will come from the debilitating attrition caused by the rising tides of bureaucracy and control that are steadily strangling human ingenuity and undermining our future. Addressing this serious and growing problem, *Pioneering Research: A Risk Worth Taking* explains the urgent need to maintain both the originality and freedom of expression that is so vital to our

economic growth and scientific development Citing global trends and attitudes that currently threaten these conditions Braben details some bold new initiatives that may offer a possible solution A compelling read for today s scientists policy makers and concerned laypeople Braben s book will change our understanding of the politics of scientific achievement and expose the threat to our future from bureaucracy paper trails political correctness lowest common denominator solutions and accountability the invisible chains that bind the imagination and damage our society irreparably **Biology and Its**

evolutionary journey of our species there have been three seminal events The first happened some seven million years ago when our humanoid ancestors entered on the evolutionary scene Their journey toward the second crucial event lasted over six million years when as the greatest event of our evolutionary history homo sapiens sapiens started the revolutionary process of cultural evolution Today we have arrived at the threshold of the third major event the revolution of conscious evolution when it becomes our responsibility to enter into the evolutionary design space and guide the evolutionary journey of our species The book tells the story of the first six million years of the journey in just enough detail to understand how evolution had worked in times when it was primarily biological driven by natural selection With the human revolution some fifty thousand years ago with the emergence of self reflective consciousness the evolutionary process transformed from biological into cultural From this point on the book follows the journey with detailed attention in order to learn how cultural evolution works The book is organized in three parts Part One commences with an exposition of a brief history of the evolutionary idea through time with a focus on a review of the science of general evolution and specifically social and societal evolution Next the book unfolds the evolutionary story of our species from the time when the first humanoids entered the evolutionary scene to our current era Part Two develops a systems view of evolution explores the ways and means of how evolution works characterizes evolutionary consciousness and develops the idea of conscious evolution Part Three builds upon the knowledge developed in the first two parts and sets forth the key conditions of conscious self guided evolution elaborating the core condition which is the acquisition of evolutionary competence through evolutionary learning The focus of this part is on an approach to the design of evolutionary guidance systems that our families neighborhoods communities organizations social and societal systems can use to design the future they aspire to attain The work is set aside from other statements in three important ways It provides 1 a comprehensive review of how evolution has worked with a focus on socio cultural evolution 2 an explanation of evolutionary consciousness and the conditions of engaging in conscious evolution and 3 most significantly it develops a detailed approach and a methodology to the design of evolutionary guidance systems
