The IBM Operational Decision Manager product family provides value to organizations that want to improve the responsiveness and precision of automated decisions. This decision management platform on IBM z OS provides comprehensive automation and governance of operational decisions that are made within mainframe applications. These decisions can be shared with other cross platform applications providing true enterprise decision management. This IBM Redbooks publication makes the case for using Operational Decision Manager for z OS and provides an overview of its components. It is aimed at IT architects, enterprise architects and development managers looking to build rule based solutions. Step by step guidance is provided about getting started with business rules by using a scenario based approach. This book provides detailed guidelines for testing and simulation and describes advanced options for decision authoring. Finally it describes and documents multiple runtime configuration options. This third edition SG24 8014 02 of this IBM Redbooks publication updated the information presented in this book to reflect function available in IBM Operational Decision Manager for z OS Version 8.7.1.

**Securing E-Business Applications and Communications** Jonathan S. Held, John Bowers, 2001-06-22. This book walks readers through the process of setting up a secure E commerce Web site. It includes implementation examples for Unix, Solaris and Linux, Windows NT 4.0 and Windows 2000. The authors pay particular attention to the security issues involved. They also highlight the plethora of encryption algorithms that are instrumental in securing data. Together the authors and the reader develop a site from concept to implementation. The material makes use of numerous coding examples to illustrate how to use the most current technologies from Microsoft, Sun and others to support secure transactions.
