Placenta As A Model And A Source:

Placenta as a Model and a Source Olga Genbacev,Arnold Klover,Rebecca Beaconsfield,2012-12-06 The foreword to the book of a meeting is often an excuse for a paen of praise a homily or even an apologia and sometimes a combination of all three While certain traditions have been dispensed with in this volume the standard pattern for the foreword has its advantages so here at least tradition will be adhered to though in reverse order from that stated above It The apologia can be dismissed briefly for the editors have explained in their General Introduction that this is not the book of a meeting All that remains to be added here is a description of the modus operandi Being aware that speaking and writing are different activities requiring different presentation each participant was asked to prepare a script for publication resembling what he would speak about only in outline It may be that as a result the essays lack detail and are thin under some of the classical headings of scientific writing So the reader in turn is asked to accept this and give his attention instead to the concepts and ideas contained therein It may even come about that this kind of presentation will in the end result in something less ephemeral than the standard conference proceedings book Criticism of conference proceedings and the type of meetings that give rise to these little loved tomes is not a new phenomenon *Placental Toxicology* B. V. Rama Sastry,1995-02-24 *Placental Toxicology* examines placental transfer and toxicology of drugs and environmental agents to placenta as well as to fetus For the first time in a single volume placental and fetal consequences of exposure of pregnant women to drugs environmental chemicals and infections such as HIV are discussed Topics include The art of in *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1990 *In Vitro Methods in Developmental Toxicology* Gary L. Kimmel,Devendra M. Kochhar,2019-06-04 First Published in 1990 this text brings together the work of several investigators who used in vitro techniques to probe the nature of embryonic cell response to a diverse group of chemical agents It focuses on the approaches limitations usefulness and applicability of defining mechanisms underlying altered development This work includes discussions on pharmacodynamic principles and placental transfer mechanisms It also examines the potential for in vitro systems to serve as an adjunct to the risk assessment process Ideal for both the layman and the expert in this area this volume provides a general understanding of the types of approaches that can be used and specific approaches in investigating altered development *Multi-Omics Approaches to Study Placental Development and Disease* Geetu Tuteja,Michael J. Constantinescu,2017-01-12 Our knowledge of reproductive biology has increased enormously in recent years on cellular molecular and genetic levels leading to significant breakthroughs that have directly benefitted in vitro fertilization IVF and other assisted reproductive technologies ART in humans and animal systems

Animal Models and Human Reproduction presents a comprehensive reference that reflects the latest scientific research being done in human reproductive biology utilizing domestic animal models Chapters on canine equine cow pig frog and mouse models of reproduction reflect frontier research in placental biology ovarian function and fertility non coding RNAs in gametogenesis oocyte and embryo metabolism fertilization cryopreservation signal transduction pathways chromatin dynamics epigenetics reproductive aging and inflammation Chapters on non human primate models also highlight recent advancements into such issues as human in vitro fertilization IVF and assisted reproductive technologies ART This book offers animal scientists reproductive biology scientists clinicians and practitioners invaluable insights into a wide range of issues at the forefront of human reproductive health

Concepts and Models for Drug Permeability Studies Bruno Sarmiento,Catarina Leite Pereira,José Das Neves,2024-02-23 Concepts and Models for Drug Permeability Studies Cell and Tissue Based in Vitro Culture Models Second Edition summarizes the most important developments in in vitro models for predicting the permeability of drugs This book is structured around three different approaches summarizing the most recent achievements regarding models comprising i immortalized cells with an intrinsic ability to grow as monolayers when seeded in permeable supports ii primary cells isolated from living organisms and directly cultured as barrier monolayers and iii tissue based models constructed with cell lines and extracellular matrix that resembles the tridimensional structure of mucosae and other biological membranes or animal patient derived tissues Each model is covered in detail including the protocol of generation and application for specific drugs drug delivery systems The equivalence between in vitro cell and tissue models and in vivo conditions is discussed highlighting how each model may provisionally resemble different drug absorption route Chapters included in the first edition were updated with relevant data published in recent years while four new chapters were included to reflect new emerging directions and trends in drug permeability models Concepts and Models for Drug Permeability Studies Cell and Tissue Based in Vitro Culture Models Second Edition is a critical reference for drug discovery and drug formulation scientists interested in delivery systems intended for the administration of drugs through mucosal routes and other important tissue barriers e g the BBB Researchers studying mucosal biology can use this book to familiarize themselves and exploit the synergic effect of mucosal delivery systems and biomolecules Summarizes the current advances in the use of permeability models in drug transport Covers the most important buccal gastric intestinal pulmonary nasal vaginal ocular renal skin and blood brain barrier in vitro models Includes case studies to facilitate understanding of various concepts in computer aided applications Updates in the second edition include organ on chip devices 3D advanced models multiple layered tissues organoids etc and multicompartimentalized tissue models

Exploring Maternal-Fetal Pharmacology Through PBPK Modeling Approaches André Dallmann,Johannes Nicolaas Van Den Anker,2022-06-06

Fertilization and Early Embryogenesis: From Research to Clinical Practice Martin Anger,Katerina Komrskova,Jason Knott,Ahmed Balboula,Paolo Rinaudo,2025-01-23 Early embryo development in mammals begins with the recognition and

fusion of gametes of both sexes followed by a series of mitotic cell divisions. The gamete fusion results in the formation of totipotent cells which are capable of developing into three basic cell lineages in mammals. These include the trophoblast surrounding the embryo and facilitating communication with the mother, the epiblast which develops into the fetus, and the primitive endoderm which forms the yolk sac. Until implantation, the embryos undergo remarkable changes including histone modifications, chromatin remodeling, epigenetic modifications of chromatin, the onset of transcription from the embryonic genome, and the first differentiation to the formation of the trilaminar disc containing all primary cell lineages required for the formation of fetal tissues and organs. Remarkably, some of the most complex events of early development, such as fertilization, are achieved during complete transcriptional silencing. Another unique feature is how fast the development proceeds. In humans, reaching the stage of early gastrulation takes approximately two weeks.

Reproductive and Developmental Toxicology Ramesh C. Gupta, 2022-02-11. Selected for Doody's Core Titles 2024 in Toxicology. Reproductive and Developmental Toxicology Third Edition is a comprehensive and authoritative resource providing the latest literature on this complex subject by focusing on three core components: parent, placenta, and fetus, and the continuous changes that occur in each. Enriched with relevant references describing every aspect of reproductive toxicology, this revised and updated resource addresses the totality of the subject, discussing a broad range of topics including nanoparticles and radiation, gases and solvents, smoking, alcohol, and drugs of abuse, and metals, among others. In addition, it is the only resource to include reproductive and developmental toxicity in domestic animals, fish, and wildlife. With a special focus on placental toxicity, this book is the only available reference to connect the three key risk stages. Completely revised and updated to include the most recent developments in the field, this book is an essential resource for advanced students and researchers in toxicology, as well as biologists, pharmacologists, and teratologists from academia, industry, and regulatory agencies. Provides a complete, up-to-date, integrated source of information on the key risk stages during reproduction and development. Offers diverse and unique in vitro and in vivo toxicity models for reproductive and developmental toxicity testing in a user-friendly format that assists in comparative analysis. Includes new chapters on developments in systems toxicology and predictive modeling of male developmental toxicity, adverse outcome pathways in reproductive and developmental toxicology, ovarian and endometrial toxicity, developmental neurotoxicity of air pollution, and more.

Principles of Regenerative Medicine Anthony Atala, Robert Lanza, Tony Mikos, Robert Nerem, 2018-08-09. Principles of Regenerative Medicine Third Edition details the technologies and advances applied in recent years to strategies for healing and generating tissue. Contributions from a stellar cast of researchers cover the biological and molecular basis of regenerative medicine, highlighting stem cells, wound healing, and cell and tissue development. Advances in cell and tissue therapy, including replacement of tissues and organs damaged by disease and previously untreatable conditions such as diabetes, heart disease, liver disease, and renal failure, are also incorporated to provide a view to the future and framework for

additional studies Comprehensively covers the interdisciplinary field of regenerative medicine with contributions from leaders in tissue engineering cell and developmental biology biomaterials sciences nanotechnology physics chemistry bioengineering and surgery Includes new chapters devoted to iPS cells and other alternative sources for generating stem cells as written by the scientists who made the breakthroughs Edited by a world renowned team to present a complete story of the development and promise of regenerative medicine *Animal Models in Biomedical Research* Cynthia Petrie Smith,1991 **Bibliography of Agriculture** ,1990 *Laws and Models* Carl W. Hall,2018-10-08 The laws that govern our physical universe come in many guises as principles theorems canons equations axioms models and so forth They may be empirical statistical or theoretical their names may reflect the person who first expressed them the person who publicized them or they might simply describe a phenomenon However they may be named the discovery and application of physical laws have formed the backbone of the sciences for 3 000 years They exist by thousands *Laws and Models* Science Engineering and Technology the fruit of almost 40 years of collection and research compiles more than 1 200 of the laws and models most frequently encountered and used by engineers and technologists The result is a collection as fascinating as it is useful Each entry consists of a statement of the law or model its date of origin a one line biography of the people involved in its formulation sources of information about the law and cross references Illustrated and highly readable this book offers a unique presentation of the vast and rich collection of laws that rule our universe Everyone with an interest in the inner workings of nature from engineers to students from teachers to journalists will find *Laws and Models* to be not only a handy reference but an engaging volume to read and browse **Bibliography of the Cat** Ezra Berman,Charles G. Liddle,1976 Some 2300 references to scientific books journal articles and miscellaneous publications about the domestic cat Also includes some foreign language citations Both retrospective and current Entries include abstract numbers bibliographical information and abstracts that vary in length Author subject descriptors indexes **Regenerative Medicine** Niranjana Bhattacharya,Phillip George Stubblefield,2014-11-07 This book represents a major contribution to the emerging science of regenerative medicine using non fetal sources of stem cells The Editors Dr Niranjana Bhattacharya and Professor Phillip Stubblefield have brought together some of the most pre eminent scientists working on regenerative medicine to share information on currently ongoing work in this area alongside unpublished observations that will help to shape the contours of future therapies *Regenerative Medicine Using Non Fetal Sources of Stem Cells* discusses the potential clinical and therapeutic applications using non fetal stem cells as well as providing instruction on the collection isolation and characterization of stem cells from various non fetal sources such as menstrual blood adipose tissue breast milk and uprooted decidual teeth This book will be an invaluable resource for both active researches and those entering the field The Editors truly hope that the text will act as a stimulant to professionals and clinical scientists who may be inspired to further the work of the pioneering scientists who have contributed to this volume
