**Risk, Disaster and Crisis Reduction** Valerie November, Yvan Leanza, 2014-10-06 In the field of risks and crises both the access to relevant information and its circulation are seen as crucial factors Based on a new integrated theoretical model focusing on the stakeholder the book proposes analysis of information reformulation and circulation in risk environments and crisis situations Simply circulating the information does not mean that it will be picked up by those who could benefit from it This has been amply demonstrated by the various crises and catastrophes that have shaken the planet in recent years In

order to be able to deal with risk situations and crises it must be possible for information when it circulates to be understood and interpreted by a wide range of stakeholders working in fields such as health and natural or environmental risks By observing closely in three very different situations the way in which information is gathered processed distributed and used this book examines the countless reformulations redefinitions and even reorientations to which all information is subjected This multiple reformatting at least according to the hypothesis put forward in this book is an important element in ensuring that the information produced circulates and reaches those for whom it is intended The intention is then to analyze the way in which information circulates in situations of risk and crisis In order to do it the authors propose a new theoretical model based on different approaches This model is anchored in the trend of research that has been oriented towards a wider understanding of risks and their territorial and social consequences These ideas question the approach to risk which focuses primarily on technical aspects and probability The model also draws from approaches to risk that focus on the stakeholders involved in the debates and the need for an integrated vision of risks Risks are thus considered heterogeneous plural and transcalar The information flow about risks was studied first in the SHOC Room of the World Health Organization WHO in Geneva a central place through which passes all information destined to managing world wide epidemic risks Then the research team monitored the constitution and the reception of a field library about risks management and reduction sent to Madagascar an island systematically hit by cyclones This following process has permitted the analysis of information dissemination during a crisis situation The third field work was done in Cameroun to observe the use and transmission of information in two NGO specializing in sanitary risks prevention using traditional and biomedical conceptualization of health and illness The book ends with a practical tool to assess and help the information circulation in risk and crisis situations

**Emergency Powers of International Organizations** Christian

Kreuder-Sonnen, 2019-11-21 *Emergency Powers of International Organizations* explores emergency politics of international organizations (IOs). It studies cases in which, based on justifications of exceptional necessity, IOs expand their authority, increase executive discretion, and interfere with the rights of their rule addressees. This IO exceptionalism is observable in crisis responses of a diverse set of institutions including the United Nations Security Council, the European Union, and the World Health Organization. Through six in-depth case studies, the book analyzes the institutional dynamics unfolding in the wake of the assumption of emergency powers by IOs. Sometimes the exceptional competencies become normalized in the IOs' authority structures, the ratchet effect. In other cases, IO emergency powers provoke a backlash that eventually reverses or contains the expansions of authority, the rollback effect. To explain these variable outcomes, this book draws on sociological

institutionalism to develop a proportionality theory of IO emergency powers It contends that ratchets and rollbacks are a function of actors ability to justify or contest emergency powers as disproportionate The claim that the distribution of rhetorical power is decisive for the institutional outcome is tested against alternative rational institutionalist explanations that focus on institutional design and the distribution of institutional power among states The proportionality theory holds across the cases studied in this book and clearly outcompetes the alternative accounts Against the background of the empirical analysis the book moreover provides a critical normative reflection on the anti constitutional effects of IO exceptionalism and highlights a potential connection between authoritarian traits in global governance and the system s current legitimacy crisis
