Plan Purpose In Nature:

Plan for Development of the Land and Water Resources of the Southeast River Basins, 1963 *Management Planning for Nature Conservation* Mike Alexander, 2012-12-05 The first edition of Mike Alexander's *Management Planning for Nature Conservation* brought a new dimension to the modern literature on conservation management. This second edition is a significant enhancement of the original, dealing with the development both conceptual and practical of adaptive management planning for nature conservation. It is about preparing management plans and guides the reader through the entire process. Case studies including a conservation and access plan demonstrate the planning process in action. This approach to planning can be applied to any place which is managed entirely or in part for wildlife. It can be applied to the management of species or habitats in any circumstance regardless of site designation. The process is fully compatible with the Convention on Biological Diversity's ecosystem approach to conservation management. Mike Alexander has long been at the forefront of developing management planning for conservation with experience ranging from Uganda to Estonia and from Costa Rica to Wales. He is the General Secretary of the Conservation Management System Consortium, a group of organisations with a common aim of raising standards and developing best practice in conservation management and planning. In 2012, Mike Alexander was elected a Fellow of the Society of Biology in recognition of his contribution to nature conservation and in particular management planning. This book has drawn on the experiences and expertise of the CMS consortium and other leaders in both conservation research and wildlife management from around the world. It is essential reading for professional conservation managers and any student studying management planning for conservation within a range of degree and postgraduate courses.
