Cancer Chemoprevention Gary J. Kelloff, Ernest T. Hawk, Caroline C. Sigman, 2008-08-17 Despite significant advances in cancer treatment and measures of neoplastic progression drug effect or early detection overall cancer incidence has increased pharmacodynamic markers and markers that measure cancer associated morbidity is considerable and overall prognosis as well as predict responses to specific therapy cancer survival has remained relatively flat over the past All these biomarkers have the potential to greatly augment several decades 1 2 However new technology the development of successful chemoprevention therapies allowing exploration of signal transduction pathways but two specific types of biomarkers will have the most identification of cancer associated genes and imaging of immediate impact on successful chemopreventive drug tissue architecture and molecular and cellular function is development those that measure the risk of developing increasing our understanding of carcinogenesis and cancer invasive life threatening disease and those whose no progression This knowledge is moving the focus of cancer lation can reasonably predict clinical benefit and therapeutics including cancer preventive treatments to therefore serve as surrogate endpoints for later occurring drugs that take advantage of cellular control mechanisms clinical disease Thus far the biomarker that best measures to selectively suppress cancer progression these two phenomena is intraepithelial neoplasia IEN Carcinogenesis is now visualized as a multifocal because it is a near obligate precursor to cancer

Prostate Cancer Prevention Jack Cuzick, Mangesh A. Thorat, 2014-02-15 Prostate cancer is by far the most common cancer in men and the second leading cause of death due to cancer It comprises a mixed group of tumours displaying varying clinical behaviour while some have a very aggressive course others are rather indolent Prevention of prostate cancer and discrimination between aggressive and indolent forms are important clinical goals and the acquisition of significant new evidence on means of achieving these aims makes this book particularly timely A wide range of topics are covered by leading authorities in the field The biology and natural history of prostate cancer are reviewed and the role of lifestyle and dietary factors assessed Detailed attention is paid to risk prediction biomarkers and to the role of novel high throughput nucleic acid based technologies in improving risk prediction and thereby allowing tailored approaches to cancer prevention Potential means of chemoprevention of prostate cancer are also reviewed in depth covering the very positive new data on the impact of aspirin as well as evidence regarding

5 reductase inhibitors DFMO and lycopene Guidance is provided on the differentiation of aggressive from indolent disease and the policy and research implications of recent findings are examined This book will be of interest to both clinicians and researchers
