Rivalry In Business Science Among Nations:

Rivalry Reuven Brenner,1990-01-26 A theory of business enterprise and rivalry is developed from the assumption that decisions to undertake new ventures and readiness to take risks are related to fears of being hierarchically outranked

Leading Issues in Competition, Regulation, and Development Paul Cook,2004-01-01 The promotion of liberalized and deregulated markets by bilateral and multilateral aid donors and by global institutions such as the WTO has led to significant attention being paid to competition and regulatory reforms in developing economies The process of reform involves the transfer and diffusion of market models derived from practice and theory in developed countries However in developing countries regulation needs to do more than simply promote competitiveness and consumer interests it also needs to ensure that the market nurtures development By rigorously examining the numerous impacts of regulation this book will help to fill a significant gap in the literature on economic and social development The book now available in paperback draws together contributions from leading experts across a range of disciplines including economics law politics and governance public management and business management The authors begin with an extensive overview of the issues of regulation and competition in developing countries and carefully illustrate the important themes and concepts involved Using a variety of country and sector case studies they move on to focus on the problems of applicability and adaptation that are experienced in the process of transferring best practice policy models from developed to developing countries The book presents a clear agenda for further empirical research and is notable for its rigorous exploration of the links between theory and practice Although there is substantial interest in competition and regulation as yet there has been relatively little investigation of these issues in developing economies This book redresses the balance and will be a valuable resource for researchers academics teachers and students interested in development economics and development studies It will also be of great relevance for practitioners and policymakers working in the fields of competition policy and regulatory reform

Court of Canada occupies a special place in the court structure of Canada. It was founded principally to adjudicate legal disputes in which the Canadian government was involved. Since its change of name in 1971, it has become primarily an administrative appeal court dealing with the review of decisions made by federal administrative tribunals in addition to its existing jurisdictions: admiralty, intellectual property, tax, and other areas. As a federal court within the nation, its very existence has provoked discussion and debate as the various provincial court systems claim a position of primacy within our society for the adjudication of legal disputes. Central to this history of the Court is an examination of the judges who have sat on its bench. Bushnell investigates who the judges have been and examines their work with particular focus on the judges' views of the proper approach to decision making. His study contains a wealth of information, much of which may not be widely known in the profession. As such, The Federal Court of Canada constitutes a rich source both for those with a legal background and for those with an interest in the working and history of legal institutions. *Journal of Small Business and Entrepreneurship*, 2005. *International Handbook of Research on Indigenous Entrepreneurship* L. -P. Alain Fayolle, EM Lyon and CERAG Laboratory, France and Solvay Business School, Belgium. A must have for researchers of developmental economics as well as for entrepreneurship scholars, this collection assembles studies of indigenous entrepreneurship from five continents.

Book Dheeraj Kumar Singh, **Evolutionary Economics and Creative Destruction** J. Stanley Metcalfe, 2006 The central theme of this book is competition treated as an evolutionary process in which the focus is upon economic change and not economic equilibrium This theme is explored by linking together differences in economic behaviour with the role of markets as co ordinating institutions In this picture innovation plays a central role as a primary source of differential behaviour of firms and the purpose of the book is to identify the consequences of these differences for competition and competitive advantage

Perspectives in Industrial Organization B. Dankbaar, John Groenewegen, H. Schenk, 2012-12-06 This book contains the key note lectures and a selection of papers that were presented at the 15th Conference of the European Association for Research in Industrial Economics EARIE held under the auspices of GRASP at Erasmus University Rotterdam in 1988 plus an introductory chapter by the Editors Upon suggestions by the Editors all papers have been revised for this book some more extensively than others Robin Marris has added to his lecture a synopsis of the contributions to the Round Table on the Micro Macro Interface which he chaired during the Conference The papers cover issues that seem to be both interesting and relevant for the 1990s While some of the papers are cast in a rather established research frame enabling the use of regular academic routines others are first attempts at delineating the contours of areas that are peripheral to what is often considered as the core of Industrial Organization In their introductory chapter the Editors set forth that a neglect of those areas may well relegate Industrial Organization to social irrelevancy Therefore it is hoped that the book will also contribute to a reflection on the main lines of Industrial Organization research for the 1990s thus helping to create a healthy perspective for this part of economics at a time when macroeconomics is undergoing a severe crisis

The Coming of Neo-Feudalism Joel Kotkin, 2020-05-12 Following a remarkable epoch of greater dispersion of wealth and opportunity we are inexorably returning towards a more feudal era marked by greater concentration of wealth and property reduced upward mobility demographic stagnation and increased dogmatism If the last seventy years saw a massive expansion of the middle class not only in America but in much of the developed world today that class is declining and a new more hierarchical society is emerging The new class structure resembles that of Medieval times At the apex of the new order are two classes a reborn clerical elite the clerisy which dominates the upper part of the professional ranks universities media and culture and a new aristocracy led by tech oligarchs with unprecedented wealth and growing control of information These two classes correspond to the old French First and Second Estates Below these two classes lies what was once called the Third Estate This includes the yeomanry which is made up largely of small businesspeople minor property owners skilled workers and private sector oriented professionals Ascendant for much of modern history this class is in decline while those below them the new Serfs grow in numbers a vast expanding property less population The trends are mounting but we can still reverse them if people understand what is actually occurring and have the capability to oppose them
