**Shape of Things** Vilém Flusser, 2013-06-01 This book presents for the first time in English an array of essays on design by the seminal media critic and philosopher Vilém Flusser It puts forward the view that our future depends on design In a series of insightful essays on such ordinary things as wheels carpets pots umbrellas and tents Flusser emphasizes the interrelationships between art and science theology and technology and archaeology and architecture Just as formal creativity has produced both weapons of destruction and great works of art Flusser believed that the shape of things and the designs behind them represents both a threat and an opportunity for designers of the future

**The Shape of Things Unseen** Adam Zeman, 2025-01-16 Fascinating absorbing and educative A C Grayling Highly original and beautifully written Dominic Lawson A compelling insight into how our imagination works based on the latest scientific research People often think of imagination as something used only in creative endeavours In fact we use imagination constantly as we reminisce anticipate plan daydream read create imagined worlds The truth is we live in the here and now much less than we tend to think Imagination isn't the exception in our daily lives it's our default setting Yet only now are we beginning to understand exactly how it works From hallucination to sleepwalking from REM sleep to delusions neurologist Adam Zeman brilliantly guides us through the latest scientific studies in the world of the imagination He draws on research in neuroscience the study of human origins and child development to show how the human brain is above all else a creative imaginative organ and that we have evolved to share what we imagine Our brains behave in strikingly similar ways when we observe remember imagine or act Imagine looking at a cube and your eye will trace the contours of the cube as if you were actually seeing it Yet it turns out that people differ hugely in their imaginative experience Some people lack sensory imagery altogether they would be unable to picture their family if asked to but still lead fulfilling even highly creative lives From how we visualise to how we understand the minds of others from the benefits of play to mental disorders *The Shape of Things Unseen* dazzles and delights It is an essential guide to the latest discoveries about the workings of the human mind

Objects of belief Joshua Easterling,Fiona Somerset,2025-10-07 Objects in late medieval Europe were a means for lay people and clergy to negotiate their access to powers beyond the everyday in folk practice as well as religious observance As has been noted by scholars this period is marked by a profusion of objects granted special importance imaginary as well as material These objects prompt reconsideration of cultural and intellectual

frameworks for example of superstition reform and heresy that never quite successfully contain them Essays in this volume center attention on these things themselves from puppets to rosaries as indeed do the written accounts through which they are often mediated With a focus on England contributors re evaluate our understanding of works and authors including Geoffrey Chaucer Walter Hilton Nicholas Love Julian of Norwich miracles of the Virgin Edward Hall s Chronicle the Wycliffite Glossed Gospels and the Croxton Play of the Sacrament A Reinterpretation of Linguistic Relativity Guohui

Jiang,2020-12-03 As a vital issue not only of linguistics but also of cognitive sciences psychology neurosciences philosophy etc engaging in the study of the relation between language thought and reality the doctrine of linguistic relativity LR went through upsurge downturn renaissance during more than 80 years yet remains still unsolved puzzle for researchers of all these academic areas Numerous treatises with valued ideas about this issue are continuously contributed to this theme nevertheless the study of LR has been stagnant up to nowadays The reason is that in my opinion the study has deviated from the right direction and this deviation might be boiled down to three basic concepts The expository scope of LR LR cannot and should not concern with a human speech thinking action at the level of human biological physiological traits b human behaviours in all fields of his everyday life and c human spiritual activities in the areas of science literature philosophy art etc LR will explain that constrained by the language ordinary people are not aware that the reality they talk think about does not coincide with the outside world they physically experience The relativity We should ponder the language thought reality relation in line with the original intention of Whorf when he proposed the principle of LR i e the relativity should not be interpreted as the discrepancy between customs modes of thinking and patterns of behavior of different linguistic communities on the basis of comparing peculiarities of their languages The language The doctrine of LR should concern with the human language as a complete and comprehensive system but not with a set of sporadically observed phenomena and certain random interpretation of them The linguistic intermediated world is eventually construed by the entire system of language rather than an assembly of peculiar language items **Findagroov™ Reviews The Songs Of... Platonism and the Objects of Science Scott Berman, 2020-02-20 What are the objects of science Are they just the things in our scientific experiments that are located in space and time Or does science also require that there be additional things that are not located in space and time Using clear examples these are just some of the questions that Scott Berman explores as he shows why alternative theories such as Nominalism Contemporary Aristotelianism Constructivism and Classical Aristotelianism fall short He demonstrates why the objects of scientific knowledge need to be not located in space or time if they are to do the explanatory work scientists need them to do The result is a contemporary version of Platonism that provides us with the best way to explain what the objects of scientific understanding are and how those non spatiotemporal things relate to the spatiotemporal things of scientific experiments as well as everything around us including even ourselves
