Shaping Of Cambridge Botany:

The Shaping of Cambridge Botany Stuart Max Walters, 1981 *The Shaping of Cambridge Botany* Stuart Max Walters, 1981 **Nature Displaced, Nature Displayed** Nuala C. Johnson, 2011-04-29 Botanical gardens brought together in a single space the great diversity of the earth's flora. They displaced nature from forest and foothill and rearranged it to reveal something of the scientific principles underpinning the apparent chaos of the wild. *Nature Displaced, Nature Displayed* shows how the design and display of such gardens was not determined by scientific principles alone. Through a study of three botanical gardens belonging to the University of Cambridge, the Royal Dublin Society and the Belfast Natural History Society, the author shows how the final outcome involved a complex interplay of ideas about place, identity, empire, botanical science, and especially aesthetics, creating spaces that would educate the mind as well as please the senses. This highly engaging book offers a wealth of fresh insights into both the history and development of botanical gardens as well as connections between science and aesthetics.

Dictionary Of British And Irish Botanists And Horticulturalists Including plant collectors, flower painters and garden designers Ray Desmond, 2002-09-11 An exhaustive treatment of all British and Irish botanists through 1976.

Confronting Contagion Melvin Santer, 2014-09-02 Throughout history, humankind's working theories regarding the cause of infectious disease have shifted drastically as cultures developed their philosophic, religious, and scientific beliefs. Plagues that were originally attributed to the wrath of the gods were later described as having nothing to do with the gods, though the cause continued to be a mystery. As centuries passed, medical and religious theorists proposed reasons such as poor air quality or the configuration of the planets as causes for the spread of disease. In every instance, in order to understand the origin of a disease theory during a specific period of history, one must understand that culture's metaphysical beliefs. In *Confronting Contagion*, Melvin Santer traces a history of disease theory all the way from Classical antiquity to our modern understanding of viruses. Chapters focus on people and places like the Pre-Socratic Philosophers, Galen, and the emergence of Christianity in Rome; the Black Death in fourteenth-century Europe; cholera and puerperal sepsis in the nineteenth century; and other periods during which our understanding of the cause of disease was transformed. The cause of contagious disease was demonstrated to be a general biological phenomenon: there are contagious diseases of plants, animals, and bacteria with causes identical to causes of human diseases. These issues are uniquely included in this book. In each case, Santer identifies the key thinkers who helped form the working disease theories of the time. The book features many excerpts from primary sources, from the Hippocratic Corpus to the writings of twentieth-century virologists, creating an authentic synthesis of the Western world's intellectual and religious attitude toward disease throughout history.

The British Arboretum Paul A. Elliott, Charles Watkins, Stephen Daniels, 2016-09-12 This study explores the science and culture of nineteenth century British arboreta or tree collections The development of arboreta was fostered by a variety of factors each of which is explored in detail global trade and exploration the popularity of collecting the significance to the British economy and society developments in Enlightenment science changes in landscape gardening aesthetics and agricultural and horticultural improvement Arboreta were idealized as microcosms of nature miniature encapsulations of the globe and as living museums This book critically examines different kinds of arboretum in order to understand the changing practical scientific aesthetic and pedagogical principles that underpinned their design display and the way in which they were viewed It is the first study of its kind and fills a gap in the literature on Victorian science and culture *The Natural History of Sydney* Daniel Lunney, Pat Hutchings, Dieter Hochuli, 2009-09-01 On 3 November 2007 the Royal Zoological Society of NSW held its annual forum with the topic being The natural history of Sydney It has remained as the title of this book The program contained the following introduction as the theme of the forum and it has remained as the theme for this book Sydney has a unique natural history providing a home for iconic animals and plants while remaining a global city It captured the imagination of prominent naturalists and inspired visits and collecting trips to the infant colony of New South Wales in the late 1790s and early to late 1800s From these collections flowed great descriptive works detailing the new and unusual animals and plants of the antipodes Gould Owen Huxley Peron Banks and many others recounted new and evocative flora and fauna Many collecting trips for the great museums and institutions in Europe began in Sydney Sydney still continues to engage naturalists and those grappling with the current drama of climate change and conservation The Royal Zoological Society of New South Wales founded in Sydney in 1879 is a product of the grand 19th century tradition of natural history with a particular emphasis on animal life Sydney is also home to some of Australia's oldest and finest institutions such as the Australian Museum the University of Sydney and the Royal Botanic Gardens Throughout Sydney there are places where the natural habitat has not been supplanted by urban growth and the interest in Sydney's endemic flora and fauna remains strong This forum draws on a magnificent interdisciplinary vision while continuing to employ all the modern tools in the investigation and communication of Sydney's natural history It reflects a resurgence in local history and

pursues the natural history of our harbour side city in a modern framework The day of the forum was a captivating display of the diversity of the fauna of Sydney both native and introduced and its varied habitats and of the diverse ways of appreciating natural history including the history of natural history Also on display was the depth of scholarship lying behind each of the presentations The subject clearly has a profound hold on many professional biologists historians and those keen to conserve their local area but if the day is any guide there are vastly more people living in or visiting Sydney who have more than a passing interest in this topic The subject matter ranged from the history of institutions engaged in natural history through animal groups as diverse as reptiles and cicadas to ideas on how to see Sydney as a natural setting Other papers dealt with the use by Aboriginal people of the native biota in terms of fishing and being displayed in rock paintings before the arrival of the colonists There is little doubt that this theme could run to 10 volumes not just this one but the diversity of ideas skills and organisms displayed in this one book will serve as a guide to what lies beyond these pages A considerable effort was made by each author to present their material as both interesting and accurate The material is built on lifetimes of sustained effort to study record and communicate findings and ideas It is also built on the lifetime work of our predecessors who laboured to find and record the natural history of Sydney We are indebted to their efforts This book records not only the outcome of a successful day of presentations but more importantly the lifelong scholarship of those authors in each of the specialist fields Not only have the authors been absorbed by documenting the biodiversity they have included studies or intelligent speculation on the factors which have impacted on this diversity since Cook sailed along the NSW coast in 1770 The Macquarie Dictionary e g the revised third edition defines natural history as the science or study dealing with all objects in nature and the aggregate of knowledge connected with such knowledge This makes natural history of wide interest to the entire community of Sydney both residents and visitors However we have specialised to the extent that we have focused principally on fauna the RZS being a zoological society Nevertheless plant communities are recognised as part and parcel of the natural history of Sydney as is a sense of the geography of the city with its magnificent harbour sandstone backdrop and spectacular national parks surrounding the city Also of great importance is how others in the past have seen the natural history of what is now called Sydney All these ideas are captured in this book One of the strengths of being a naturalist i e one who is versed in or devoted to natural history especially a zoologist or botanist Macquarie Dictionary is the opportunity to look across the individual disciplines be it a specialist in birds mammals or polychaetes a taxonomist or an ecologist or writer Their advantage is the ability to see the richness of a place such as Sydney Consequently most botanists and zoologists have one or two highly specialised skills but a keen interest in the broader picture and can thus appreciate the importance of for example cave art or fish diversity in the harbour and recognise that the vertebrate fauna of Sydney has changed over the 222 years since European settlement and no doubt the invertebrate fauna has changed although it is less easily assessed Our aim in this book is to draw attention to the natural history of Sydney for scholars as

well as those who have the task of looking after a particular area such as within a local government area or a particular taxon such as reptiles or fish and those who have the opportunity to conserve areas taxa or institutions through their employment or legislative responsibilities It is also for teachers and lecturers colleagues in other cities and towns in Australia and those with a keen interest in managing our urban wildlife our cultural heritage or promoting the profound value of our natural heritage within a city landscape It also displays the importance of museum and herbarium collections in documenting the changes since 1770

The Darwinian Heritage David Kohn, 2014-07-14 Representing the present rich state of historical work on Darwin and Darwinism this volume of essays places the great theorist in the context of Victorian science The book includes contributions by some of the most distinguished senior figures of Darwin scholarship and by leading younger scholars who have been transforming Darwinian studies The result is the most comprehensive survey available of Darwin's impact on science and society Originally published in 1986 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Ecology and Enclosure Shirley Wittering, 2013-02-07 South Cambridgeshire has some of the richest arable land in England and has been cultivated for millennia By the turn of the nineteenth century industrialisation and massive population growth had resulted in an enormous increase in the demand for food which in turn led to enclosure But this desire to plough every available piece of land resulted in the destruction of many valuable and distinctive habitats that had existed for centuries The Ecology of Enclosure breaks new ground in comparing the effect of Parliamentary Enclosure with the findings of the enthusiastic Botanisers from Cambridge this reveals not only the effect of enclosure on the ecology of the land but also on the people whose link with the land was broken The first section presents a study of social and agricultural life before enclosure describing geology and climate the fold course open field system of farming and the strict stinting rules which governed how land could be used for grazing and stock movement and the crop rotation systems employed The second part describes the process of enclosure including opposition to it the changes that occurred to the landscape and within village communities as work in industry gradually replaced rural occupations the effects of fencing on movement and of the loss of common land to the plough The third section is an analysis of the new study of Botany which the University of Cambridge was enjoying in the eighteenth and nineteenth centuries based on their own
