

# What is the CIM?

- A Unified Modeling Language (UML) based information model representing real-world objects and information entities exchanged within the value chain of the electric power industry
  - Maintained by IEC in the Sparx Enterprise Architect modeling tool
- Enable integration of applications/systems
  - Provides a common model behind all messages exchanged between systems
  - Basis for defining information exchange models
- Enable data access in a standard way
  - Common language to navigate and access complex data structures in any database
    - Provides a hierarchical view of data for browsing and access with no knowledge of actual logical schema
  - Inspiration for logical data schemas (e.g., for an operational data store)
- Not tied to a particular application's view of the world
  - But permits same model to be used by all applications to facilitate information sharing between applications

Bastos, 1994 This work is the result of the proceedings of the 10th Annual Conference 94 ESPRIT CIM Europe It reports on the results in development and implementation of CIM technologies The key technologies which are being developed and the results emerging from the collaborative projects have contributed to the establishment of an integrative approach to manufacturing problems which embraces engineering logistics process automation business functions organizational and environmental concerns

**Sharing CIM Solutions** Joergen K. H. Knudsen, 1994      **Holonic and Multi-Agent Systems for Manufacturing** Vladimír Mařík, Pavel Vrba, Paulo Leitão, 2011-08-19 This book constitutes the refereed proceedings of the 5th International Conference on Industrial Applications of Holonic and Multi Agent Systems HoloMAS 2011 held in Toulouse France August 29 31 2011 The 25 revised full papers presented were carefully reviewed and selected from 36 submissions The papers are organized in topical sections on industrial agents simulation and modelling planning and scheduling smart technical systems and MAS for unmanned aerial vehicles      IT and Manufacturing Partnerships Jimmie Browne, Ramón Haendler Mas, O. Hlodversson, 1996 The theme of this book is the development of partnerships between manufacturing companies their suppliers and customers and the facilitating of these partnerships by information technology and telecommunications In the 1980s the emphasis in manufacturing was on integration within the four walls of the manufacturing plant The main issues facing researchers and industrial practitioners at the time were CAD CAM integration integration of production planning and control systems the development of sophisticated computer driven manufacturing assembly and testing systems and their control through sophisticated shop floor control systems Today the emphasis has moved towards supply chain management integration of the supply chain through Electronic Data Interchange EDI and Just in Time JIT or Quick Response approaches and customer driven manufacturing This includes the integration of manufacturing and distribution logistics planning and control systems Consequently success for manufacturing companies in the 1990s requires closer collaboration with customers suppliers and distributors than in the past Information Technology and the emergence of a powerful global information infrastructure enable manufacturing industries throughout Europe to develop collaborative partnership across the value chain Successful collaboration is achieved by the sharing of information at all phases of the business cycle across the supply chain and across national and international boundaries The need to collaborate across the supply chain has particular consequences for small and medium sized manufacturing SMEs companies many of whom are compared and subassembly suppliers to the larger companies Indeed the collaboration between supplier SMEs and their large customers has in many cases gone beyond JIT supply of components based on orders delivered processed and frequently paid for using EDI technology and now extends to joint design and engineering activity Collaboration between manufacturing companies across the supply chain is therefore placing increasing pressure on the developers of the global information superhighway

and on the developers of CAD and other engineering software to ensure compliance with emerging standards such as STEP in order to allow intercompany collaboration These are the issues which form the background of this book The book is aimed at those researchers and industrial practitioners interested in learning about recent progress in manufacturing systems research and application Mature results emerging from the ESPRIT IiM programme are presented Readers Manufacturing managers an engineers Quality process engineers IT suppliers vendors Academic researchers Technology transfer centres and Industrial associations

**Ein Konzept für den Zielplanungsprozeß einer Fabrikplanung ausgehend von der Unternehmensstrategie und unter Berücksichtigung eines turbulenten Unternehmensumfeldes**

Holger Peschke, 2002-01-14 Inhaltsangabe Einleitung In einer immer komplexer und dynamischer gewordenen Umwelt gilt es heute für Unternehmen die Bedürfnisse und Wünsche ihres Zielmarktes zu ermitteln und diese wirksamer und wirtschaftlicher als ihrer Wettbewerber zufrieden zu stellen. Die Absatzmärkte haben sich in den letzten Jahrzehnten von Verkäufer zu Käufermärkten entwickelt. Die zunehmende Konkurrenz mit preisgünstigen qualitativ hochwertigen Produkten und Dienstleistungen gepaart mit einem ausgezeichneten Service hat die Kundenerwartungen ansteigen lassen. Verbraucher fordern zunehmend Güter die auf ihre individuellen Bedürfnisse zugeschnitten sind. Durch eine zunehmende Internationalisierung und den Abbau internationaler Schranken kann unter Umständen ein einziges Unternehmen den Markt für den Wettbewerb auf der ganzen Welt setzen. So kann ein niedriger Preis, hervorragende Qualität oder ein ausgezeichnete Service schnell zum Standard für alle Mitbewerber werden. Nur Unternehmen die mit den besten Anbietern in ihrem Angebotsbereich zumindest in einer Wettbewerbskategorie wenigstens gleichrangig sind werden eine gute Wettbewerbschance haben. Da die Lebenszyklen von Produkten ebenso wie von Dienstleistungen immer kürzer werden reduziert sich zwangsläufig auch die Zeit die den Unternehmen für die Produktentwicklung und Produkteinführung zur Verfügung steht. Zur Beschreibung dieser Tendenzen in einem schwer prognostizierbaren Umfeld wird von Produktionswissenschaftlern und Betriebswirten immer häufiger der Begriff Turbulenz verwendet. Konkret wird es zusätzlich erforderlich sein dass Unternehmen ein hohes Maß an operativer, struktureller und vor allem strategischer Beweglichkeit an den Tag legen. Für das nachhaltig erfolgreiche Agieren tritt damit eine bislang wenig beachtete Eigenschaft hinzu. Um der Turbulenz wirksam entgegenzutreten zu können wird zunehmend Wandlungsfähigkeit von Unternehmen gefordert. Eine weit umfassendere Anforderung als die Gewährleistung bestimmter Flexibilität. Heutige Unternehmen stehen somit immer häufiger vor dem Problem sich schnell auf immer neue Veränderungen einstellen zu müssen. Die relativ stabilen

Rahmenbedingungen für herer Jahre können nicht mehr in ausreichendem Maße als Planungsbasis ihrer Geschäfte und Planungsziele zugrunde gelegt werden Ein besonders betroffener Teilbereich der Unternehmensplanung ist die Fabrikplanung deren Einflussgebiet sowohl in finanzieller Hinsicht als auch in ihrer Produktions- und Logistikmanagement in Virtuellen Unternehmen und Unternehmensnetzwerken Bernd Kaluza, Thorsten Blecker, 2013-03-07 International renommierte Autoren untersuchen die Herausforderungen die sich durch die neuen Organisationsstrukturen ergeben und erarbeiten Lösungen für diese sehr aktuelle Problematik Die Beiträge weisen eine hohe praktische Relevanz auf

**Enterprise Interoperability** Marten van Sinderen, Pontus Johnson, 2011-03-07 This book constitutes the proceedings of the Third International IFIP Working Conference on Enterprise Interoperability IWEI 2011 held in Stockholm Sweden March 23-24 2011 The special theme chosen for IWEI 2011 was Interoperability and Future Internet for Next Generation Enterprises Thus special attention was given to how the interoperability needs of enterprises will be shaped and supported by the emerging Future Internet The 15 papers presented in this volume were carefully selected from 47 submissions based on a thorough reviewing process in which each paper was scrutinized by at least three experts in the field The papers cover a wide spectrum of enterprise interoperability issues ranging from foundational theories frameworks architectures methods and guidelines to applications and case studies This volume also includes the abstracts of the two invited talks on challenges for future networked enterprise systems Creating Business Value with Information Technology: Challenges and Solutions Shin, Namchul, 2002-07-01 Questions on the business value of information technology IT which have been raised by managers and researchers for the last decade are not settled yet Firms invest in IT to improve their business performance However some firms fail to improve their business performance while others succeed The overall value of IT varies enormously from firm to firm Computerization does not automatically create business value but it is one essential component that should be coupled with organizational changes such as new strategies new business processes and new organizational structure Creating Business Value with Information Technology Challenges and Solutions aims to solicit the studies that yield significant new insights into the business value of IT **Solaris Solutions for System Administrators** Sandra Henry-Stocker, Evan R.
