algebra **Discrete Groups in Space and Uniformization Problems** B. Apanasov, 1991-06-30 A revised and substantially enlarged edition of the Russian book Discrete transformation groups and manifold structures published by Nauka in 1983 this volume presents a comprehensive treatment of the geometric theory of discrete groups and the associated tessellations of the underlying space Also dealt with in depth are geometric and conformal structures on manifolds with particular emphasis on hyperbolic n dimensional manifolds A detailed account of the geometric and analytic properties of geometrically finite Mobius groups in n dimensional space is given and this forms the basis of the subsequent analysis Emphasis is placed on the geometrical aspects and on the universal constraints which must be satisfied by all tessellations and structures on manifolds Annotation copyrighted by Book News Inc Portland OR **2-Knots and Their Groups** Jonathan Hillman, 1989-03-30 To attack certain problems in 4 dimensional knot theory the author draws on a variety of techniques focusing on knots in S^4 whose fundamental groups contain abelian normal subgroups Their class contains the most geometrically appealing and best understood examples Moreover it is possible to apply work in algebraic methods to these problems Work in four dimensional topology is applied in later chapters to the problem of classifying 2 knots **Collected Works of William P. Thurston with Commentary** Benson Farb, David Gabai, Steven P. Kerckhoff, 2023-06-05 William Thurston's work has had a profound influence on mathematics He connected whole mathematical subjects in entirely new ways and changed the way mathematicians think about geometry topology foliations group theory dynamical systems and the way these areas interact His emphasis on understanding and imagination in mathematical learning and thinking are integral elements of his distinctive legacy This four part collection brings together in one place Thurston's major writings many of which are appearing in publication for the first time Volumes I-III contain commentaries by the Editors Volume IV includes a preface by Steven P Kerckhoff Volume I contains William Thurston's papers on foliations mapping classes groups and differential geometry **Lectures on the Asymptotic Theory of Ideals** D. Rees, 1988-11-25 In this book Professor Rees introduces and proves some of the main results of the asymptotic theory of ideals The author's aim is to prove his Valuation Theorem Strong Valuation Theorem and Degree Formula and to develop their consequences The last part of the book is devoted to mixed multiplicities Here the author develops his theory of general elements of ideals and gives a proof of a generalised degree formula The reader is assumed to be familiar with basic commutative algebra as covered in the standard texts but the presentation is suitable for advanced graduate students The work is an expansion of lectures given at Nagoya University **A Survey of Knot Theory** Akio Kawauchi, 2012-12-06 Knot theory is a rapidly developing field of research with many applications not only for mathematics The present volume written by a well known specialist gives a complete survey of knot theory from its very beginnings to today's most recent research results The topics include Alexander polynomials Jones type polynomials and Vassiliev invariants With its appendix containing many useful tables and an extended list of references with over 3 500 entries it is an indispensable book for everyone concerned with knot theory The book can

serve as an introduction to the field for advanced undergraduate and graduate students Also researchers working in outside areas such as theoretical physics or molecular biology will benefit from this thorough study which is complemented by many exercises and examples

18 Unconventional Essays on the Nature of Mathematics Reuben Hersh, 2006-01-16 This book comes from the Internet Browsing the Web I stumbled on philosophers cognitive scientists sociologists computer scientists even mathematicians saying original provocative things about mathematics And many of these people had probably never heard of each other So I have collected them here This way they can read each other's work I also bring back a few provocative oldies that deserve publicity The authors are philosophers mathematicians a cognitive scientist an anthropologist a computer scientist and a couple of sociologists Among the mathematicians are two Fields Prize winners and two Steele Prize winners None are historians I regret to say but there are two historically oriented articles These essays don't share any common program or ideology The standard for admission was Nothing boring Nothing trite nothing trivial Every essay is challenging thought provoking and original Back in the 1970s when I started writing about mathematics instead of just doing mathematics I had to complain about the literature Philosophy of science was already well into its modern revival largely stimulated by the book of Thomas Kuhn But philosophy of mathematics still seemed to be mostly foundationist ping pong in the ancient style of Rudolf Carnap or Willard Van Ormondt Quine The great exception was Proofs and Refutations by Imre Lakatos But that exciting book was still virtually unknown and unread by either mathematicians or philosophers I wrote an article entitled Introducing Imre Lakatos in the Mathematical Intelligencer in 1978

Homological Questions in Local Algebra Jan R. Strooker, 1990-09-06 This book presents an account of several conjectures arising in commutative algebra from the pioneering work of Serre and Auslander Buchsbaum The approach is via Hochster's Big Cohen-Macaulay modules though the complementary view point of Peskine Szpiro and Roberts who study the homology of certain complexes is not neglected Various refinements of Hochster's construction obtained in collaboration with Bartijn are included A special feature is a long chapter written by Van den Dries which explains how a certain type of result can be lifted from prime characteristic to characteristic zero Though this is primarily a research monograph it does provide introductions to most of the topics treated Non-experts may therefore find it an appealing guide into an active area of algebra

Twistors in Mathematics and Physics T. N. Bailey, R. J. Baston, 1990-08-23 This 1990 collection of review articles covers the considerable progress made in a wide range of applications of twistor theory

Classification Theories of Polarized Varieties Takao Fujita, 1990 A polarised variety is a modern generalization of the notion of a variety in classical algebraic geometry It consists of a pair the algebraic variety itself together with an ample line bundle on it Using techniques from abstract algebraic geometry that have been developed over recent decades Professor Fujita develops classification theories of such pairs using invariants that are polarised higher dimensional versions of the genus of algebraic curves The heart of the book is the theory of D genus and sectional genus developed by the author but numerous related topics are discussed or sur

Cohen-Macaulay Modules Over Cohen-Macaulay Rings Yūji Yoshino, 1990 The purpose of these notes is to explain in detail some topics on the intersection of commutative algebra representation theory and singularity theory They are based on lectures given in Tokyo but also contain new research

In the Tradition of Thurston III Ken'ichi Ohshika, Athanase Papadopoulos, 2024-03-19 William Thurston's ideas have altered the course of twentieth century mathematics and they continue to have a significant influence on succeeding generations of mathematicians The purpose of the present volume and of the other volumes in the same series is to provide a collection of articles that allows the reader to learn the important aspects of Thurston's heritage The topics covered in this volume include Kleinian groups holomorphic motions earthquakes from the Anti de Sitter point of view the Thurston and Weil Petersson metrics on Teichmüller space 3 manifolds geometric structures dynamics on surfaces homeomorphism groups of 2 manifolds and the theory of orbifolds

Mapping Class Groups and Moduli Spaces of Riemann Surfaces Carl-Friedrich Bödigheimer, Richard Martin Hain, 1993 The study of mapping class groups and moduli spaces of compact Riemann surfaces is currently a central topic in topology algebraic geometry and conformal field theory This book contains proceedings from two workshops held in the summer of 1991 one at the University of Göttingen and the other at the University of Washington at Seattle The papers gathered here represent diverse approaches and contain several important new results With both research and survey articles the book appeals to mathematicians and physicists
